Introduction

Welcome and thank you for purchasing “Double Trend Profit”

The “Double Trend Profit” is a new revolutionary trend indicator which is using a new "double-confirmation" signals technology. There signals you will be getting are of the highest quality. If used correctly, this indicator can generate almost no losing trades at all!

Here are some average sample trades:

Double Trend Profit is a new trend indicator released on **November 11th**. It's the first trading tool to use the brand new "double-confirmation" signals technology, which enables even complete novices to make high profit in Forex everyday.

Depending on the timeframe used, (M15, M30 or H1) you can expect from 1 or 2 to 7 or 10 signals per day on each pair.

The amount of signals also highly depends on the price movement. If there is a strong down trend or an uptrend from the previous trading day, the indicator will keep the previous signal, until the price changes it's behavior and reverses.

Double Trend Profit software package includes:

- 2 built-in indicator systems with the new "double-confirmation" signals technology.
- A detailed and easy to follow user's guide with sample trades, detailed step-by-step trading guide etc.
- My personal promise to do my best to help you become a successful trader.

Congratulations on getting the Double Trend Profit package!

This indicator can easily win more than 85% of the trades. If you follow all the usage and trading rules it could sometimes even generate no losses at all!

We strongly recommend you make sure to fully understand the entire trading system before putting it into practice.

Experiment and gain experience in demo accounts before trading with your own money. If you find that you need further help or have any questions, do not hesitate to contact our technical department.

We wish you a great trading success!

Installing the Indicator

IMPORTANT: If you don't have MetaTrader ® installed, please download it from this link:

http://www.alpari.co.uk/files/site_uk/00software/MT4_set_up.exe

Follow the instructions and open a demo or real account. We recommend trading the indicators on demo account before proceeding to real accounts.

Unzip the zip file that you have downloaded :

The indicator file name is: **doubletrendprofit.ex4**

The user's manual file is: doubletrendprofit.pdf

→ **Step 1:** Copy the indicator file EX4 into your /experts/indicators/ folder.

This folder is a folder of the MetaTrader trading platform.

Examples:

If you are using the Alpari MetaTrader broker, the folder will be at
C:\Program Files\MetaTrader - Alpari\experts\indicators

If you are using the Interbank FX Trader broker, the folder will be at
C:\Program Files\Interbank FX Trader 4\experts\indicators\

If you are using the FXDD broker, the folder will be at
C:\Program Files\FXDD – MetaTrader 4\experts\indicators\

If you can't find your /experts/indicators/ folder,
please contact our technical support.

→ **Step 2:** Open the MetaTrader® platform, and click on View -> Navigator.

You can also press CTRL+N.

→ **Step 3:** A window titled 'Navigator' should appear. Click on Custom Indicators.

→ **Step 4:** You should see the **Double Trend Profit** in the Custom Indicators folder. Double click on the Double Trend Profit and click OK to load it onto your chart.

If you need any assistance, please do not hesitate to contact our technical support team.

Entering and Exiting Trades

The Double Trend Profit © generates trades when both of the signal lines come into an agreement. The rule explained below will help you to use the signals correctly.

A short (sell) signal is only valid when both of the signal lines are "red" and "white" at the same moment.

A long (buy) signal is only valid when both of the signal lines are "green" and "blue" at the same moment.

To make sure you fully understand the rule given above, please go through the in-depth long and short trades explanations shown below.

The image shows two sets of horizontal lines. The top set consists of a red line above a white line, followed by the word "SELL" in bold red capital letters. The bottom set consists of a green line above a blue line, followed by the word "BUY" in bold green capital letters.

In-depth Long Trade Explanation

The Double Trend Profit Indicator generates a long (buy) signal when both signal lines are "green" and "blue" at the same candle.

As shown on the screenshot to your left, on the 1st candle the "green" line starts, but there is no "blue" line yet. This is not yet a valid long (buy) signal. On the 2nd candle however, a "blue" line starts, while the "green" line keeps going. Since both signal lines are now in a total agreement, ("blue" and "green") the long (buy) signal on the candle "2" is 100% valid and we can safely exit our previous short (sell) trade and enter the new (buy) long trade.

In-depth Short Trade Explanation

The Double Trend Profit Indicator generates a short (sell) signal when both signal lines are "red" and "white" at the same candle. Once again, the screenshot to your left focuses on 2 candles. On the 1st candle the "red" line starts, but the "blue" continues. We need both signal lines to be "red" and "white", for this signal to be valid, so we don't do anything yet.

On the 2nd candle, the "blue" signal line changes to "white", while the "red" signal line keeps going. Now both signal lines are "red" and "white", which means they are in a total agreement. Right now, the signal becomes 100% valid and we can safely exit our previous long (buy) trade and enter the new short (sell) trade.

IMPORTANT RULES - How to use the signals

IMPORTANT RULE FOR TREND TRADING:

Do not use the indicator on a flat market! Use the indicator ONLY at active market hours – for example London session, US session. Trend will not be noticeable on a weak market (night time, Christmas period, other holidays etc...) keep reading and I will explain everything ...

Rule #1

- Identify a current trend. (Remember? Trend is your friend?)
- Ignore all signals against a current GLOBAL trend!

Example:

Trend is up – but you get a “sell” signal (Ignore it and wait for a “buy” signal to enter)

This is the most important rule, if you follow it you will have almost no losing trades at all.

Rule #2

The next highly important rule: Do not trade and do not use the indicator on a sideways trend. This is a “MUST follow” rule.

If you DON'T follow or ignore the rules above – good results are NOT guaranteed!

Stop Loss

Place your stop loss according to the popup alert SL number.
In most trades stop loss is calculated with this formula:
Previous bar high or low + extra number of pips.

You can adjust the SL extra number of pips in the indicator INPUTS.
IMPORTANT: Set stop loss for ALL your trades and DO NOT deviate from it.

Once the trade has touched your stop loss, be disciplined and close the trade.

This will protect you from major capital losses.

Exiting Trades

Option 1 Exit trades when the Double Trend Profit issues the opposite trading signal. This ensures that you trade with maximum profits and right before the market reverses.

Option 2 Exit trades according to the popup alert TP number.
Remarks: You can adjust TP and SL levels depending on your trading style. This can be done at the indicator inputs.

Option 3 Another exit mechanism which is highly effective is to exit near strong support or resistance levels. It is a method that generates exits earlier, so you take profits early.

Time Frames and Pairs

- 15 min, 30 min, 1 hour, 4 hours
 - All major pairs
- (Try it on EUR/USD and GBP/USD 1 hour timeframe)

Signal Popup Alert Window:

Alert Buy/Sell Signal - current entry price
 TakeProfit – take profit level
 StopLoss – stop loss level

Input Parameters:

All the Inputs are ready to use/trade by default. You don't have to change anything.

If you wish you may change SL/TP according your trading style and you can also change the sound (aAlerts) and email (EmailOn) alerts to true/false.

The two most important indicator inputs are SignalPeriod1 and SignalPeriod2. I highly recommend NOT to change these settings, as they work very tightly together and each one is depending on the settings and inputs of the other.

A Stop Loss (and aTake_Profit) – preset extra number will be added to the previous bar high or low and displayed in your popup alert. I also highly recommend to use the default values for SL and TP, however you can change them according to your personal preference.

Special offer for V.I.P. members only **Highly recommended by Karl Dittmann:**

"100 Pips Daily SET & FORGET"

Exclusively for members
(manual Autopilot trading system):

<http://www.karldittmann.com/100pipsdaily-set-and-forget.html>

The very best SET & FORGET Forex manual system ever!

PERFECT FOR PEOPLE WITH FULL TIME JOB!

Attention: this system is a totally different product and has
no connection of any type with "Double Trend Profit"

EMAIL alert setup:

The indicator can automatically send email alerts to any of your devices:

Setup your metatrader4 to send email:

Email alert is already activated in the Double Trend Profit INPUTS, all you have to do is setup your own mail server info...

Email setup can be done in: Tools => Options => Email

If you need more info on how to setup an email alert, go to [youtube.com](https://www.youtube.com) and search for "mt4 email setup" there are plenty of free video samples.

Recommendations

Try to use the indicator ONLY during ACTIVE market ONLY!

Do not use the indicator on a weak/slow market – outside recommended trading hours (London or US sessions). Signals never work well on a weak market, this has been proven many times...

The London session is the largest market and opens at 8.00GMT or 3AM EST and closes at 17.00 GMT or 12 PM EST.

Trading is best between 7.00am GMT and 10am GMT.

The New York session opens at 13.00 GMT or 8 AM EST and closes at 22.00GMT or 5 PM EST.

The best trades occur in the first 2-3 hours.

IMPORTANT: It is extremely important to trade only following the current trend! It will cut ALL bad trades! Never place a trade against a trend.

Example:

If the current trend is up and the indicator shows “BUY” signal – place a trade.

If the current trend is up and the indicator shows “SELL” signal – NO TRADE!

Wait for the next “BUY” signal...

Stay away from using the signals and open trades on unclear trends or sideways trends – example:

Money Management

Money management is a very important concept that has an enormous effect on draw downs and margin calls. The cardinal rule of money management is the following:

You should only risk 1-3% of your account on any single trade. You may have heard this rule a hundred times before, but it is amazing to see how many good traders fail to comprehend this concept – and don't understand why they are wiped out again and again, despite great entries and timing of trades.

Another important concept that is related to your **stop loss**: In this strategy you learned how to place a stop loss for each setup.

This stop loss is calculated regardless of your level of risk or your equity, and is based solely on price-action.

After a stop loss is set, calculate your trade size so you achieve the right percent of risk for your trades.

For example: your stop loss is 10 pips, and your equity is 10,000\$, you wish to risk 2% of your equity in this trade, so you enter a trade with 2 lots – so your risk is 200\$, or 2%.
