Examples in these materials are not to be interpreted as a promise or guarantee of earnings. Earning potential is entirely dependent on the person using the product, ideas and techniques. We do not purport this to be a "get rich scheme."

Although every attempt has been made to assure accuracy, we do not give any express or implied warranty as to its accuracy. We do not accept any liability for error or omission. Examples are provided for illustrative purposes only and should not be construed as investment advice or strategy. All materials are an educational aid only.

No representation is being made that any account or trader will or is likely to achieve profits or losses similar to those discussed in this report or on the sites. Past performance is not indicative of future results.

By purchasing any content, subscribing to our mailing list or using the website or contents of the website or materials provided herewith, you will be deemed to have accepted these terms and conditions in full as appear also on our site, as do our full earnings disclaimer and privacy policy and CFTC disclaimer and rule 4.41 to be read here with. So too, all the materials contained within this course, including this manual, whether they appear on our domain(s) or are in physical form, are protected by copyright. "Warning: The unauthorized reproduction or distribution of this copyrighted work is illegal. Criminal copyright infringement, including infringement without monetary gain, is investigated by the authorities and is punishable with imprisonment and a fine." We reserve all our rights in this regard.

Alaziac Trading CC, in association with http://www.russhorn.com or http://www. mastermethodevolution.com, the sites, content, and its representatives do not and cannot give investment advice or invite customers or readers to engage in investments through this course or any part of it.

The information provided in this content is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation or which would subject us to any registration requirement within such jurisdiction or country.

Hypothetical performance results have many inherent limitations, some of which are mentioned below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and actual results subsequently achieved by any particular trading program and method.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk and no hypothetical trading record can completely account for the impact of financial risk in actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program or system in spite of the trading losses are material points that can also adversely affect trading results. There are numerous other factors related to the market in general or to the implementation of any specific trading program, which cannot be fully accounted for in the preparation of hypothetical performance results. All of which can adversely affect actual trading results.

We reserve the right to change the set terms and conditions without notice. You can check for updates to this disclaimer at any time by visiting http://www. mastermethodevolution.com

Your use and reliance on the materials is based on your acceptance of such Terms and Conditions and policies as appear on the site.

Introduction

Welcome, and I appreciate thatyou took the time to check out my new trading system. I am positive that you will quite like this system. It's easy to use and you will like the results you can acheive with it.

This is the Forex Profit Nexus trading system.
The system is pretty user friendly, and by looking at a chart, you can pretty quickly get an idea of how the system works.. I will get into the components and the rules in a moment, but right now, let's take a look at the parts.

Here is the same image with it's components labled.

It is composed of 4 main indicators:

1. Wave
2. Arrows
3. Oscillator
4. CCIHisto
The wave and the arrows indicators work together as part of the same indicator.
The wave is a short term trend direction indicator, and it's this indicator that we will be getting out major trade signals from. The CCIHisto that is at the bottom of the chart will give us early, more aggressive entry signals as well as secondary signals in cases where the overall trend is strong.

The Oscillator indicator is a "price oscillator", it uses the difference between 2 different moving averages to determine a market bias. It's important to have an idea what direction the market has its strongest momentum, and the Oscillator is the tool that tells us.

We have tools to:
- Determine the market bias.
- Give us major entry signals.
- Give us minor, secondary entry signals.

Targets and stops will be evaluated by the market and by the size of our stop losses. We have everything we need to get started..
Bias

Before anything else, we want to know what direction we should be looking to trade.
The Nexus Oscillator is the tool for that job.

The Oscillator will either be blue or orange . A blue Oscillator is going to be "positive", meaning it will be above its zero line (center line), and an orange Oscillator will be negative, meaning it will be below the zero line.

- When the Oscillator is blue, we only look to take long (buy) trades.
- When the Oscillator is orange, we only look to take short (sell) trades.

In the image below, we can clearly see when the Oscillator is in buy mode or in sell mode.

It's important to have a market bias. The overall market direction will have stronger momentum in one direction over another, and to have an indicator like the Oscillator helps in determining that momentum.

Most market moves in the opposite direction will be smaller pullbacks, or corrections. These are often small, insignificant moves that can lead to losses if traded. The market movement in the direction of the Oscillator will generally be stronger and have a greater potential to move farther.

Wave Signals

The Nexus Wave and the Nexus Arrows work together to give us trading signals.
It's the Wave that generates the trade signal, the Arrows make the signal very visible and easy to see.

- The first candle close to print a blue Wave and a blue Arrow is a signal to go long (buy).
- The first candle close to print an orange Wave and an orange Arrow is a signal to go short (sell).
Sometimes the Wave can be narrow and difficult to see clearly, so the Arrows will help out.

The signals themselves aren't the whole picture, they are just one piece of the puzzle. If we were to take the signals as they pop up, without the confirmation of the Oscillator, we would experience more losing trades than we would like.

Filtering

Using the Oscillator as a trend filter is a wonderful way to reduce the number of losers we would experience. Putting the Wave signals together with the Oscillator, we can filter out many of the signals that would result in losing trades.

There are a couple of ways to go about looking to take filtered trades.
- Look for a signal to either buy or sell and then look to the Oscillator to see if it agrees with the direction.
- Observe the Oscillator color and only wait for a signal in that direction.
-

Either way, you will get the same result. I have found that traders do prefer one way over the other, so you will want to decide which way you like best.
In the examples above, you can see how the Oscillator has filtered the trade signals out. Taking either the long or short trades in the above image would have resulted in losing trades.

Profit Nexus Wave Trades

Let's take a look at the trade setups for the Profit Nexus Trades using the Wave / Arrows. The Wave trade is considered the conservative type of trade.

Wave Long Trade

Setup
- Oscillator must be blue.
- Wave must be orange.

Signal
- Oscillator is blue.
- On the close of a candle, the Wave turns blue and a blue Arrow shows up.

Stop Loss
- Place initial stop loss below the most recent swing low made by the market.

Target
- Place target same distance as stop loss (1:1 reward to risk ratio).

Wave Short Trade

Setup
- Oscillator must be orange.
- Wave must be blue.

Signal
- Oscillator is orange.
- On the close of a candle, the Wave turns orange and an orange Arrow shows up.

Stop Loss
- Place initial stop loss above the most recent swing high made by the market.

Target
- Place target same distance as stop loss (1:1 reward to risk ratio).

CCIHisto For Aggressive Entries

For the more aggressive trader, we can use the CCI Histogram for earlier entry signals.

The CCIHisto can give us both an earlier entry and an entry signal into a trade where the Wave doesn't change color first.

The CCIHisto is a sensitive indicator when it comes to changes in the market, and it's this sensitivity that we want to make use of.

The CCIHisto signals are considered aggressive entries as the market hasn't proven its commitment to the change in direction like we would see with the Wave indicator. The trade setups are still good setups, and the earlier entries can make up for the additional losing trade we might experience due to its tenacious nature.

*Just to be clear, an earlier entry means that we can get a long signal before the Wave indicator turns blue, or a short signal before the Wave indicator turns orange.
Profit Nexus CCIHisto Trades

Let's take a look at the trade setups for the Profit Nexus Trades using the CCI indicator.

CCIHisto Long Trade

Setup
- Oscillator must be blue.
- Wave can be orange or blue.
- CCIHisto is orange.

Signal
- Oscillator is blue.
- Wave can be orange or blue.
- CCIHisto turns blue on candle close.

Stop Loss
- Place initial stop loss below the most recent swing low made by the market.

Target
- Place target same distance as stop loss (1:1 reward to risk ratio).

CCI Short Trade

Setup
- Oscillator must be orange.
- Wave can be orange or blue.
- CCI Histogram is blue.

Signal
- Oscillator is orange.
- Wave can be orange or blue.
- CCI turns orange on candle close.

Stop Loss
- Place initial stop loss above the most recent swing high made by the market.

Target
- Place target same distance as stop loss (1:1 reward to risk ratio).

Conclusion

The Forex Profit Nexus system is a powerful and complete trading system than you can use to take profits from the market on a regular basis.
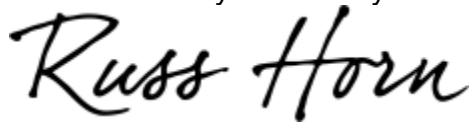

Please don't confuse the fact that it's free with a system that doesn't work, the Forex Profit Nexus system works incredibly well. Try it out on a demo for several trades, get a feel for it and then once you are satisfied, trade it live.

The Forex Profit Nexus system uses the essential components to a great system:

- Trend Direction (market bias).
- Clear entry signals.
- Clear exit criteria.

Once you have mastered the system, you shouldn't need another trading system for as long as you trade. Regardless, try it out and see what you think, I know you will be pleasantly surprised.

Best of luck to you and in your trading career!

Russ Horn
