

StartingLots

It is the lot size entered for the first layer

TakeProfit

The EA will modify its TP point to BreakEven point + (TP input) everytimes it enter a trade

Layer_Multiplier

The value of multiplier. The EA will Multiply the lot for the next layer based on this input.

AutoCompound

If the input is True, the EA will recognize its StartingLot based on your equity per 10,000.

$\text{Lot} = \text{StartingLot} \times \text{Equity} / 10000$

MaxTrades

The max layer limit.

Identifier

It is a Magic Number. Magic numbers act like the license plates for EAs. When an expert advisor reads an open trade, called a ticket, it often requests its magic number. If the magic number of the ticket matches the number that the expert advisor expects, then it knows to manage the trade.
