

Please note :

-Recommended install at FRESH New Installation of MT4.

-The authentication codes for the indicators are in the indicators folder.

(Tradeonix A.TPL)

But I'm attaching a template with the codes already filled in to make it easier.

Please note:

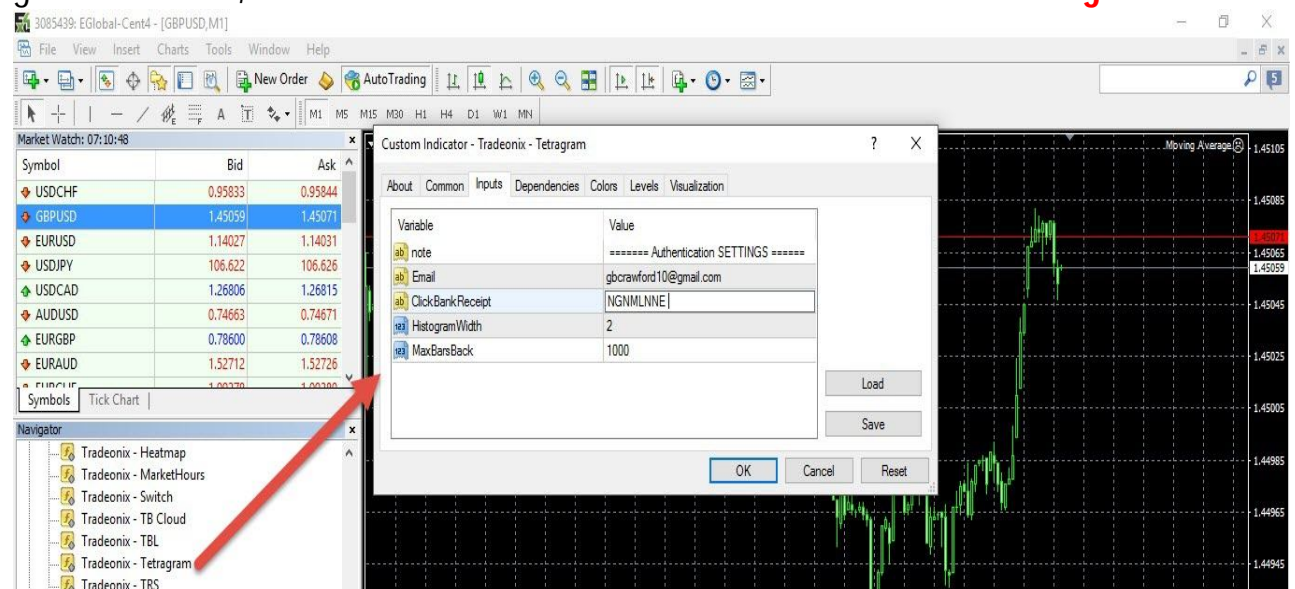

(Tradeonix A.TPL) can only be use after you follow steps below.

**You must authenticate manually via the instructions down below,
for the first time !!!**

**Also, please watch Russ's install video in the indicators
folder.**

I'm also including authentication instructions below.

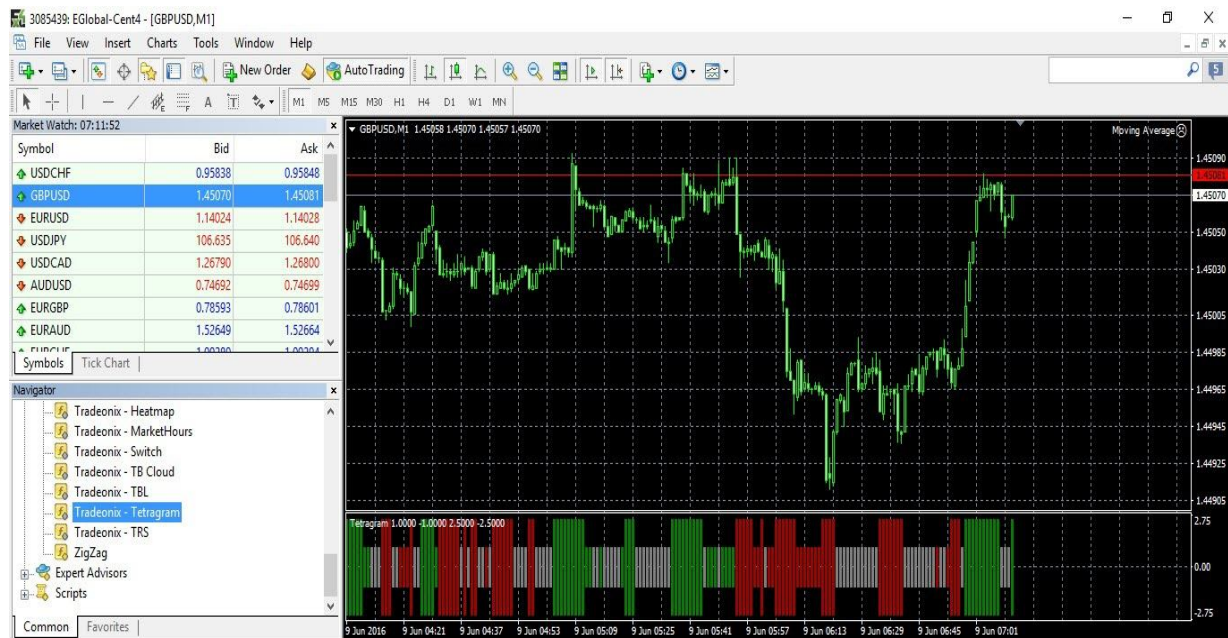

Once you've installed from the TradeonixIndicators exe file,
go to the chart, then the list of indicators and look for **Tradeonix-Tetragram**.

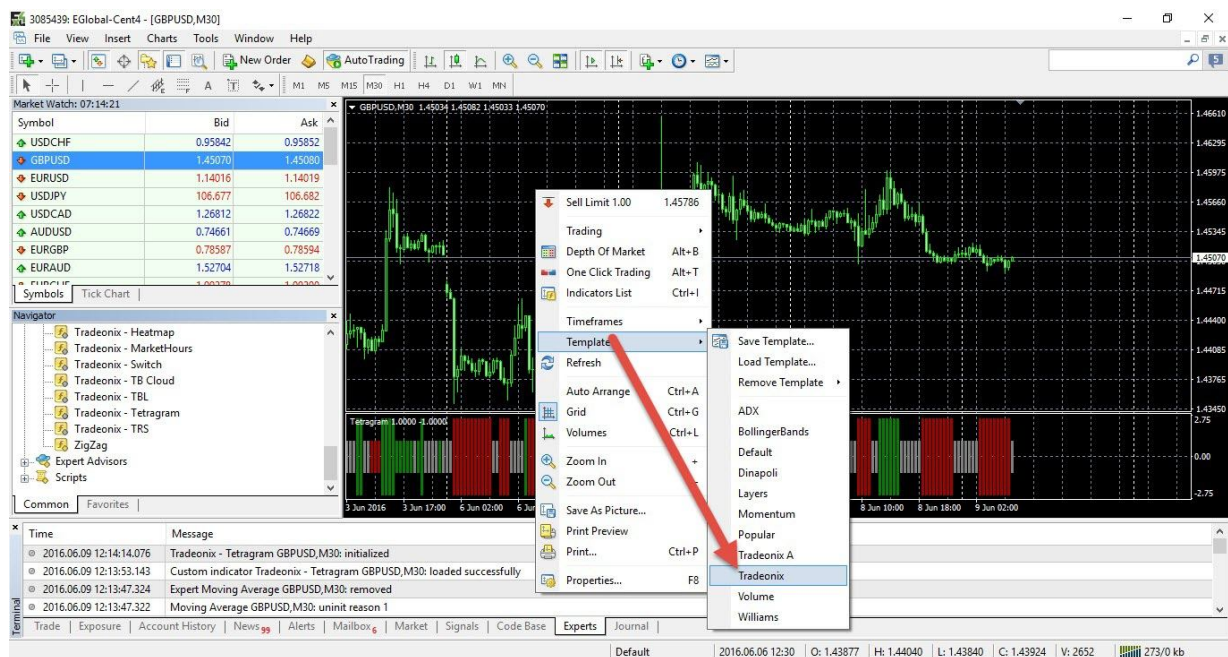

To authenticate: go to the COMMON tab make sure Allow DLL imports and Allow external imports are check.

Then go to the INPUTS tab, enter email address & Clickbank receipt **manually**.
(see Tradeonix Authentication.png)
click **OK**.

After the **Tradeonix-Tetragram** indicator load successfully.

Then you can go to templates,
choose TRADEONIX (**Original**) Not (**Tradeonix A.TPL**)

and you will see that the indicators are all on your charts.

Once done you can now use the (**Tradeonix A.TPL**) in the future without put the Authentication code again.

But once again,before you can use the (**Tradeonix A.TPL**):

You need to follow the instruction above and authenticated/load the TradeOnix program **manually** for the **first time !!**

Also, please see Russ's Authentication video.

If you have any questions, let me know.

Updates will usually go out and sent to you by the Monday-Wednesday after 1 week they are released.

Note:

If you have problem/still confuse,

I will help you install by remoting your PC using Teamviewer.
