The contents of this material are for general information and educational purposes only (contents shall also mean the website <http://www.tradeology.com/> or any website the content is hosted on, and any email correspondence or newsletters or postings related to such website). Every effort has been made to accurately represent this product and its potential. There is no guarantee that you will earn any money using the techniques, ideas and software in these materials. Examples in these materials are not to be interpreted as a promise or guarantee of earnings. Earning potential is entirely dependent on the person using our product, ideas and techniques. We do not purport this to be a "get rich scheme."

Although every attempt has been made to assure accuracy, we do not give any express or implied warranty as to its accuracy. We do not accept any liability for error or omission. Examples are provided for illustrative purposes only and should not be construed as investment advice or strategy.

No representation is being made that any account or trader will or is likely to achieve profits or losses similar to those discussed in this report or anywhere on <http://www.tradeology.com/>. Past performance is not indicative of future results.

By purchasing any content, subscribing to our mailing list or using the website or contents of the website or materials provided herewith, you will be deemed to have accepted these terms and conditions in full as appear also on our site, as do our full earnings disclaimer and privacy policy and CFTC disclaimer and rule 4.41 to be read herewith. So too, all the materials contained within this course, including this manual, whether they appear on our domain(s) or are in physical form, are protected by copyright. "Warning: The unauthorized reproduction or distribution of this copyrighted work is illegal. Criminal copyright infringement, including infringement without monetary gain, is investigated by the authorities and is punishable with imprisonment and a fine." We reserve all our rights in this regard.

Old Tree Publishing CC, in association with <http://www.tradeology.com/>, the website, content, and its representatives do not and cannot give investment advice or invite customers or readers to engage in investments through this course or any part of it.

The information provided in this content is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation or which would subject us to any registration requirement within such jurisdiction or country.

Hypothetical performance results have many inherent limitations, some of which are mentioned below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and actual results subsequently achieved by any particular trading program and method.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk and no hypothetical trading record can completely account for the impact of financial risk in actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program or system in spite of the trading losses are material points that can also adversely affect trading results. There are numerous other factors related to the market in general or to the implementation of any specific trading program, which cannot be fully accounted for in the preparation of hypothetical performance results. All of which can adversely affect actual trading results.

We reserve the right to change these terms and conditions without notice. You can check for updates to this disclaimer at any time by visiting <http://www.tradeology.com/>.

Introduction

Welcome to the Forex Cash Cloud trading system.

This trading system is based on the concept of always following the Trend. The system is unique in the sense that it relies on signals generated by a set of custom indicators. These custom indicators have been specifically developed to identify the perfect market conditions for entering trades.

The Forex Cash Cloud trading system can be traded on all time frames and all available currency pairs. The system itself is extremely user friendly and quite visual too, so it is easy to learn and would be ideal for both beginner and experienced traders.

The system has been designed to identify new emerging trends and the best conditions for a trader to join an existing trend. After all, if you can identify a powerful new trend as early as possible you can take advantage of it and ride the crest of the wave all the way to the shore.

I enjoy trading this system on the 30 Minute, 1 Hour and the 4 Hour time frames. These are the time frames that work best for me and they tend to generate the best results. However, the system itself works across all time frames so you're welcome to apply it to the time frames that work best for you.

There are also times when I am short on time (or simply looking for a challenge) that I opt to trade the system on smaller time frames like the 5 minute and 15 minute charts. The results on the lower time frames can also be consistent and quite favorable.

The system indicators and chart template are included in an auto installation wizard that accompanies this report. Simply double click on the EXE file to start the installation wizard then follow the prompts to install the system on to your MT4 trading platform.

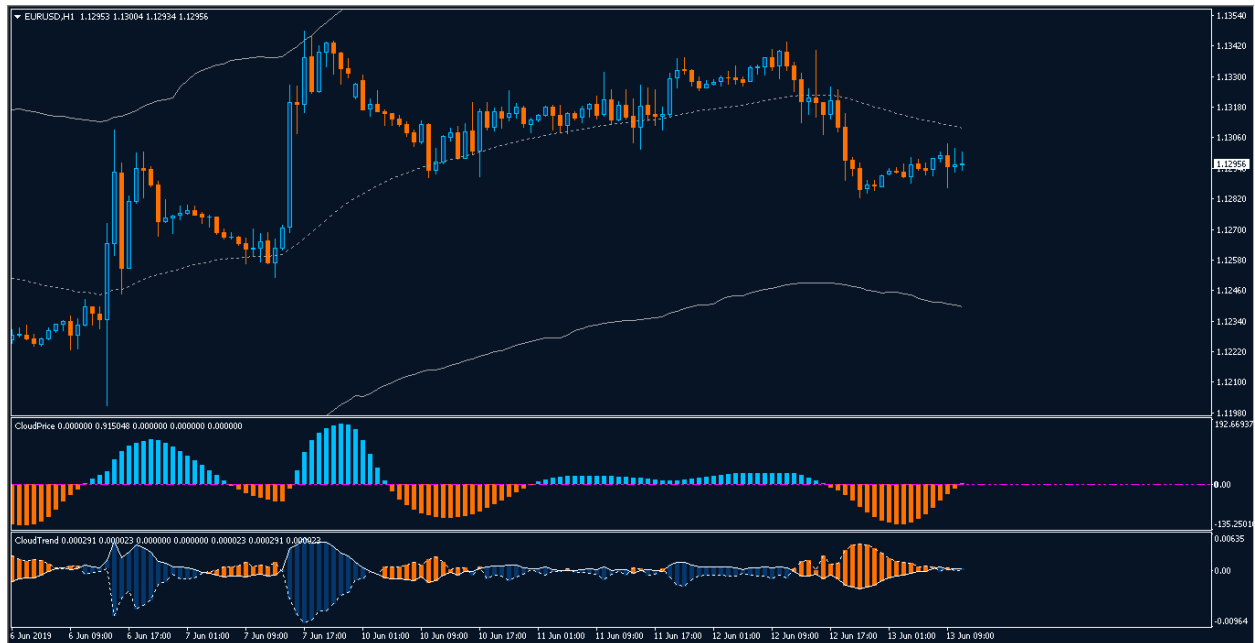

This system relies on three unique custom indicators that you won't be able to find anywhere else. The custom indicators used in this system have been named as follows: the CloudTMA indicator, the CloudPrice indicator and the CloudTrend indicator.

The rules of the Forex Cash Cloud trading system are easy to understand and put into practice. Once you are familiar with the rules you will find it easy to identify valid trading conditions. By the time you have completed reading this manual you will know exactly how to identify valid Buy and Sell trades with clearly defined entry and exit points.

Before we get into the finer details of trading this system, let's take a closer look at the different components of the system, in particular the system indicators.

At First Glance

This is what the Forex Cash Cloud trading system looks like once it has been applied on an MT4 chart. As you can see, the chart is clean. Everything that you need to trade the system can be found on a single chart as shown below.

We'll be using this chart setup to make decisions on whether to enter the market with a Buy or a Sell trade every time we trade the system. There is no need to flip between multiple charts or time frames and once you are familiar with the rules of the system you will start seeing valid trade setups on your charts in a single glance.

Our system uses 3 main indicators, i.e. the CloudTMA indicator that appears on top of the candlesticks, the CloudPrice indicator which appears below the price chart on the upper window pane and the CloudTrend indicator which appears on the bottom window pane. Our system indicators allow us to easily determine:

- The Trend direction
- The Trade direction
- The Entry level
- The Stop Loss level
- The Take Profit level

This information will be useful when we monitor our charts and attempt to identify valid trade signals. In the following chapter, we'll take a closer look at each of the Forex Cash Cloud indicators then see how it all comes together to generate valid Buy and Sell trade alerts.

Components of the System

There are 3 custom indicators used in the Better Profits trading system:

1. The CloudTMA indicator
2. The CloudPrice indicator
3. The CloudTrend indicator

1. CloudTMA Indicator

The CloudTMA indicator is our primary indicator used with this system. The indicator draws 3 lines on your price chart, i.e. the upper, middle and lower CloudTMA lines. When you install the system on your trading platform the default settings will be automatically configured for you. There's no need to make any edits to the indicator at any stage. In the following chapters I will give you all the information you need to trade with this indicator.

2. CloudPrice Indicator

The CloudPrice indicator is the secondary custom indicator that is part of our system. It works to identify Bullish and Bearish trends by drawing Blue (Bullish) and Orange (Bearish) colored bars in a Histogram. We will use this indicator to confirm the trend direction before we enter any potential trades. Again, the installation software will configure the settings for you automatically.

3. CloudTrend Indicator

The CloudTrend indicator is the tertiary custom indicator that is part of our system. Similar to the CloudPrice indicator, it works to identify Bullish and Bearish trends by drawing Dark Blue (Bullish) and Orange (Bearish) colored bars in a cloud pattern. We will also use this indicator to confirm the trend direction before we enter any potential trades. Again, the installation software will configure the settings for you automatically.

The CloudTMA Indicator

The CloudTMA indicator is designed to highlight areas on a price chart where we may encounter reversals and new emerging trends. On the image below you can see an example of this indicator together with a few of the key points you will need to be familiar with in order to use it successfully.

The first thing you will notice is that the indicator sits on top of your price chart and is made up of 3 individual lines, i.e. the upper, middle and lower CloudTMA lines.

When price encounters the lower line you will usually see price reverse and start moving upwards. On the other hand, when price encounters the upper line you will usually see price reverse and start moving downwards. For the purposes of trading the Forex Cash Cloud system we will focus on crossovers of the middle line which signal the beginning of new emerging trends.

On the image above at the Bullish Crossover point you can see that price has moved away from the reversal point at the lower line and gone on to cross above the middle line. This is a signal that the market is Bullish and we may see price continue moving upwards towards the upper line. In these scenarios we may consider looking for opportunities to enter the market with a Buy trade.

Alternatively, at the Bearish Crossover point you can see that price has moved away from the reversal point at the upper line and gone on to cross below the middle line. This is a signal that the market is Bearish and we may see price moving downwards towards the lower line. In these scenarios we may consider looking for opportunities to enter the market with a Sell trade.

The CloudPrice Indicator

The CloudPrice indicator is the secondary indicator used in the Forex Cash Cloud system. It's main purpose is to confirm the direction of the market to ensure that we are always entering trades in the right direction.

On the image below you can see an example of the way we will be using the CloudPrice indicator when trading this system. Reading this indicator is actually very simple. I'm basically looking to see whether there are Blue or Orange bars being formed above or below the middle zero line.

The zero line refers to the center line that runs through the middle of the indicator. Also commonly referred to as the waterline. When there are Blue colored bars being formed above the 0 line we may consider the trend to be Bullish and only look to enter the market with Buy trades. On the other hand, when there are Orange colored bars being formed below the 0 line we may consider the trend to be Bearish and only look to enter the market with Sell trades.

The CloudTrend Indicator

The CloudTrend indicator is the tertiary indicator used in the Forex Cash Cloud system. Similar to the CloudPrice indicator, its main purpose is to confirm the direction of the market to ensure that we are always entering trades in the right direction.

When there are Dark Blue colored bars being formed we may consider the trend to be Bullish and only look to enter the market with Buy trades. Alternatively, when there are Orange colored bars being formed we may consider the trend to be Bearish and only look to enter the market with Sell trades.

Now that you have a better idea of how the individual custom indicators work, let's take a closer look at how they all come together to generate valid Buy and Sell trade signals.

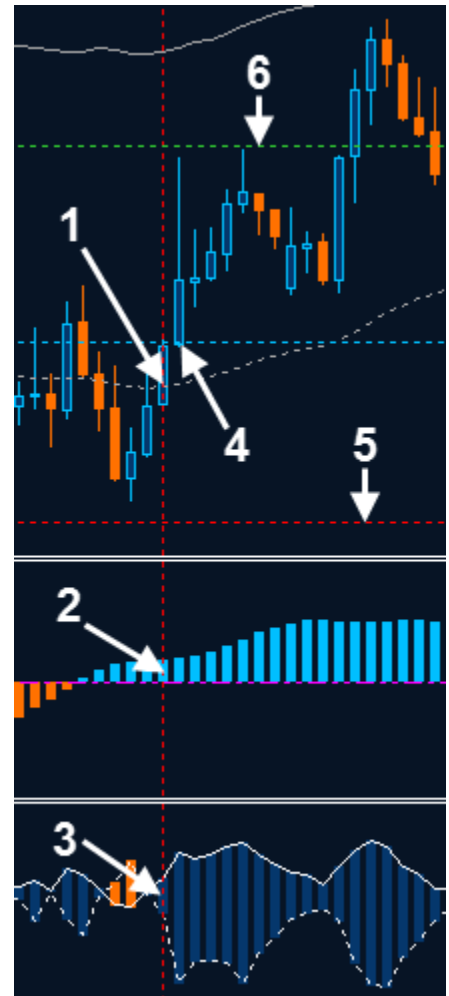

Buy Trade Rules

Setup

1. Wait for price to cross and close above the middle Cloud TMA indicator line.
2. Check and confirm that the Cloud Price indicator has formed a Blue colored bar above the 0 level.
3. Check and confirm that the Cloud Trend indicator is Blue in color.
4. Enter a Buy trade at the open of the next candle.
5. Place your Stop Loss a few pips below the most recent Swing Low or at a maximum of 20-30 pips away from your entry level.
6. Place your Take Profit the same distance away from your entry as your Stop Loss, i.e. 1:1 Risk/Reward Ratio (a 1:2 Risk/Reward Ratio is also acceptable).

NOTE: Sometimes the Cloud Price and Cloud Trend indicators may not turn Blue in color and confirm the Buy trade on the close of the crossover candle.

In these cases, you may still consider entering a Buy trade if the Cloud Price and Cloud Trend indicators turn Blue on the very next candle after the crossover candle has closed.

Sell Trade Rules

Setup

1. Wait for price to cross and close below the middle Cloud TMA indicator line.
2. Check and confirm that the Cloud Price indicator has formed an Orange colored bar below the 0 level.
3. Check and confirm that the Cloud Trend indicator is Orange in color.
4. Enter a Sell trade at the open of the next candle.
5. Place your Stop Loss a few pips above the most recent Swing High or at a maximum of 20-30 pips away from your entry level.
6. Place your Take Profit the same distance away from your entry as your Stop Loss, i.e. 1:1 Risk/Reward Ratio (a 1:2 Risk/Reward Ratio is also acceptable).

NOTE: Sometimes the Cloud Price and Cloud Trend indicators may not turn Orange in color and confirm the Sell trade on the close of the crossover candle.

In these cases, you may still consider entering a Sell trade if the Cloud Price and Cloud Trend indicators turn Orange on the very next candle after the crossover candle has closed.

Trade Examples

Buy Trade Example

If you're looking to master a new trading system you need to go through as many trade examples as possible. So, in this chapter I'm going to get you started with a few examples that will help re-enforce the system rules you have just learned.

On the right hand side you can see an example of a Buy trade that was taken on the EURUSD currency pair.

At the time I was monitoring the 1 Hour time frame when I spotted the valid trade signal. At Point 1 you can see that there is a crossover above the CloudTMA middle line.

At this moment in time I checked the CloudPrice indicator to confirm that it was Blue in color. As it turns out, at Point 2 the CloudPrice indicator confirmed the Buy trade signal with a Blue bar above the zero line.

Next, I checked the CloudTrend indicator to confirm that the market was indeed Bullish. At Point 3 you can see that the indicator is Dark Blue in color confirming the Bullish trend.

Since all the conditions for a Buy trade were met, I waited for the candle to close and at the open of the next candle I decided to enter the market with a Buy trade. The Entry level can be seen at Point 4. Immediately after entering the trade I went ahead and set my Stop Loss at Point 5 so that it was below the most recent Swing Low.

Next, I went ahead and set my Take Profit level at Point 6. Note that the distance from my Entry level to my Take Profit is the same distance of my Stop Loss to my Entry level giving me a 1:1 Reward to Risk Ratio. In this case my Stop Loss was 20 pips away from the Entry level and my Take Profit level was also 20 pips away from the Entry level.

As you can see, the trade goes on to hit my Take Profit within a few candles and I am taken out of the trade with a healthy profit.

Sell Trade Example

Here's another example trade but this time around, I'll be trading in the Short or Sell direction. On the right hand side you can see an image of a Sell trade signal that was taken on the EURUSD currency pair. I was monitoring the 1 Hour time frame when I spotted this trade signal. Everything lined up perfectly and I decided to jump in on this trade immediately.

At Point 1 you can see there is a clear crossover below the dotted CloudTMA middle line that signals a Sell trade. At the same time I checked the CloudPrice indicator to confirm that it was Orange in color.

As you can clearly see at Point 2 the CloudPrice indicator has confirmed the Sell trade signal with an Orange colored bar below the zero line. Next, I checked the CloudTrend indicator to confirm that the market was indeed Bearish. At Point 3 you can see that the indicator is Orange in color confirming the Bearish trend.

Since all the conditions for a Sell trade were met, I waited for the candle to close and at the open of the next candle I decided to enter the market with a Sell trade. The Entry level can be seen at Point 4. Immediately after entering the trade I went ahead and set my Stop Loss at Point 5 so that it was above the most recent Swing High.

Finally, I set my Take Profit level at Point 6. Note that the distance from my Entry level to my Take Profit is the same distance of my Stop Loss to my Entry level giving me a 1:1 Reward to Risk Ratio. In this case my Stop Loss was 25 pips away from the Entry level and my Take Profit level was also 25 pips away from the Entry level. The trade goes on to hit my Take Profit and I am taken out of the trade with a fair profit.

Conclusion

By now you should have a good idea of how to go about trading the Forex Cash Cloud system and I'm going to leave you with a few final thoughts that will help you get the most out of trading this powerful system.

When learning to trade a new system it is generally considered good practice to start out on a demo account and practice placing trades by simply following the rules.

This does not need to be a complicated procedure, simply apply the system indicators on your chart and scroll back in time and walk through as many valid trade setups as you possibly can. Take your time in demo mode so that you get comfortable with the system. This will help give you a better idea of how the system performs in a variety of different market conditions.

The next step is to actually trade the system live on a demo account until you have mastered it. It won't be too long before you are able to spot a 100% valid trade with a single glance. Aim to achieve consistent results over an extended period of time and if you can achieve this, you can be sure that you are ready to go live.

As always, start trading live on a small account and once you have mastered the system you may consider increasing the size of your trades. Remember that there is no such thing as a perfect trading system and you will experience losses.

Sometimes you will get signals in very quiet market conditions. In these scenarios you will find that price is moving horizontally and there is very little movement in an upward or downward direction. Be wary of placing too many trades during these times.

You will usually find that the best trades will be found on the higher time frames. Although these setups may take a bit longer to form they usually produce a better result.

I personally prefer trading this system on the 30 Minute, 1 Hour and 4 Hour time frames and I tend to stick to the Major currency pairs. The currency pairs that I favor are as follows: EURUSD, USDCHF, GBPUSD, USDJPY, AUDUSD, USDCAD, EURJPY, GBPJPY

This trading system has been a closely guarded secret of mine for a very long time and I am extremely proud to be able to share this with you. It has served me well and I am sure that it will have a dramatic impact on your trading too.

I wish you success in your trading career!
