

The relevance of these **Buy** and **Sell** signals will be explained more clearly in other sections below.

The Signal Line alerts us to the type of signal we can trade on current market conditions.

We can have two types of signals:

1. **Conservative**
2. **Aggressive**

Conservative setups arise when market conditions are **optimal** and all the trading rules are met.

Aggressive setups are not as optimal and involve more risk because one or more of the system's conservative trading rules are not met.

When traded correctly however, both Conservative and Aggressive signals can make you a lot of pips, and I do mean.... A LOT.

NOTE: Later in this manual we will cover the exact rules for Conservative and for Aggressive setups.

5) The Settings

The Settings are part of your trading assistant. They are programmed to simplify your trading once you are alerted to a setup. The image to the right shows how this will appear on your dashboard:

We have several features in the settings zone:

- **Lot Size**
- **Risk**
- **Risk in \$**
- **SL to BE**

SETTINGS	
Lot Size	0.25
Risk	1.0%
Risk \$	101.8
SL to BE	OFF
