

1) The Compass

The compass dashboard indicator is made up of two compasses that depict the flow of money (the trend direction) on the two higher time frames to the current chart we are looking to trade on.

So, for example, if we are looking to trade on the 15 minute time frames, the compass scans the money flow on the 1Hour and 4Hour time frames and shows us their direction.

Let's now look at some images to see some examples of what the compass would depict on our chart.

Example: Upward or **BUY** direction:

Image 2

As you can see in the image above, **both higher time frame compasses point upward** which means that we will be looking for a **Buy** setup ONLY!

Example: Downward or **SELL** direction:

Image 3

As you can see on the image above, **both higher time frame compasses point downward**, which means we will be looking for **Sell** setup ONLY!
