The contents of this material are for general information and educational purposes only (contents shall also mean the website <http://www.rapidresultsmethod.com> or any website the content is hosted on, and any email correspondence or newsletters or postings related to such website). Every effort has been made to accurately represent this product and its potential. There is no guarantee that you will earn any money using the techniques, ideas and software in these materials. Examples in these materials are not to be interpreted as a promise or guarantee of earnings. Earning potential is entirely dependent on the person using our product, ideas and techniques. We do not purport this to be a "get rich scheme."

Although every attempt has been made to assure accuracy, we do not give any expressed or implied warranty as to its accuracy. We do not accept any liability for error or omission. Examples are provided for illustrative purposes only and should not be construed as investment advice or strategy.

No representation is being made that any account or trader will or is likely to achieve profits or losses similar to those discussed in this report or anywhere on <http://www.rapidresultsmethod.com>. Past performance is not indicative of future results.

By purchasing any content, subscribing to our mailing list or using the website or contents of the website or materials provided herewith, you will be deemed to have accepted these terms and conditions in full as appear also on our site, as do our full earnings disclaimer and privacy policy and CFTC disclaimer and rule 4.41 to be read herewith. So too, all the materials contained within this course, including this manual, whether they appear on our domain(s) or are in physical form, are protected by copyright. "Warning: The unauthorized reproduction or distribution of this copyrighted work is illegal. Criminal copyright infringement, including infringement without monetary gain, is investigated by the authorities and is punishable with imprisonment and a fine."We reserve all our rights in this regard.

Old Tree Publishing CC, in association with <http://www.rapidresultsmethod.com>, the website, content, and its representatives do not and cannot give investment advice or invite customers or readers to engage in investments through this course or any part of it.

The information provided in this content is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation or which would subject us to any registration requirement within such jurisdiction or country.

Hypothetical performance results have many inherent limitations, some of which are mentioned below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and actual results subsequently achieved by any particular trading program and method.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk and no hypothetical trading record can completely account for the impact of financial risk in actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program or system in spite of the trading losses are material points that can also adversely affect trading results. There are numerous other factors related to the market in general or to the implementation of any specific trading program, which cannot be fully accounted for in the preparation of hypothetical performance results. All of which can adversely affect actual trading results.

We reserve the right to change these terms and conditions without notice. You can check for updates to this disclaimer at any time by visiting <http://www.rapidresultsmethod.com>.

Your use and reliance on the materials is based on your acceptance of such Terms and Conditions and policies as appear on the site.

Forexatron

In this report, I will teach you a trading system I invented, that picks swing points like nothing else. It uses trading mechanics to profit from market dynamics.

Many traders these days are trying to recognize swing points, where the market turns and goes in the opposite direction. This is a very easy task when we look back on our charts, but it is extremely difficult for most traders when doing it in real time. That's why I started to investigate and think about something that can pick those reversal points with razor sharp accuracy because I knew it can be done. And that's how I have come to invent the Forexatron.

I combined two of the most useful indicators when it comes to identifying reversal points and put them into a Trade Assistant, so it will be easier for you to spot the best possible trades without a doubt. All you need to do once you get a signal is pull the trigger and collect profits. It's that easy.

This system is purely mechanical because of the indicators it uses and the way I have combined them.

Ok, now we are ready to move onto the system explanation.

System Components & Indicators

Timeframe:

The Forexatron system can be traded on almost every timeframe available starting from 15 minute straight to the Monthly charts. Lower timeframes like 1 and 5 minutes aren't used here because there's too much noise from the market. We want only the best results.

Currency Pairs:

Every currency pair can be used, but bear in mind that for timeframes like 15 and 30 minutes, it is better to stick to trading the pairs with lower spreads. Big spreads could take up a big part of your profits.

Indicators:

1. ForexAtron Trade Assistant
2. ForexAtronindicator
3. Stochastic Oscillator indicator

Chart Setup

1. ForexAtron Trade Assistant

To set up your Forexatron Trade Assistant, watch the installation video at the top most portion of the download page.

2. ForexAtron Indicator

1. Click on the **Navigator** button to open the Navigator widow.
2. Click on **Custom Indicators** to expand the list of indicators.
3. Find **ForexAtron** on the list and double click on it.
4. Leave all settings as they are by default.
5. Click on the OK button for the ForexAtron indicator to appear on your chart.

3. Stochastic Oscillator Indicator

1. Open the Navigator widow.
2. Click on **Indicators** to expand the list of indicators.
3. Find **Stochastic Oscillator** on the list and double click on it.
4. Set the **%K period** at 8.
5. Set the **Slowing** at 3 (default).
6. Set the **%D period** at 3 (default).
7. Set the **Price field** at Low/High (default).
8. Set the **MA method** at Simple (default).
9. Click on **Colors** to set the color settings.
10. Click on **Main** LightSeaGreen as the color of the Main Stochastic line (default).
11. Click on **Signal** and select Red for the color of the Signal line (default).
12. Leave the style and the width of the main Stochastic line at default values.
13. Leave the style and the width of the Signal line at default values.
14. Click on **Levels**.
15. Double click here and type 30 for the first level value. By default it is set to 20.
16. Double click here and enter 70 for the second level value. By default it is set to 80.
17. Leave the level line color, style and width as they are by default.
18. Click on the **OK** button for the Stochastic indicator to appear on your chart.

And here's how your chart will look with all the indicators loaded.

Next, I will explain the entry conditions that must be met in order to open a trade.

Long Entry Rules

1. Price must touch or go below the Lower ForexAtron Band.
2. Stochastic must decline below the 30 level and then cross back up.
3. A bullish candle must close above the Lower ForexAtron Band.
4. When the above conditions are met, place a buy order.
5. After that, set the stop loss just below the most recent Swing low.
6. Set the take profit equal to the stop loss (1:1 risk to reward ratio).
7. Another exit option is closing the trade when there's a reversal signal. In this situation, we will not be setting a take profit level. Instead, when price moves in our favor at the same amount as the stop loss, we need to move the stop loss to break even. Then we wait for reversal signal before closing the order. This way, we can get the maximum profits from strong trending markets.

The chart below shows long trade conditions being met.

Let's have a look at a long trade example on the next page.

Long Trade Example

Here's a EUR/JPY trade on the H4 chart. Three candles before the actual entry price has declined below the Lower Forexatron band and Stochastic crossed under the 30 level. This was a sign to start looking for a long entry opportunity.

Then there was a strong push upwards and a bullish candle crossed the Lower Forexatron band from below and closed above it. At the same time, Stochastic crossed the 30 level upwards.

Those 2 conditions gave the long entry signal and a buy order was placed at the open of the next candle at 100.804 (DodgerBlue horizontal line). Immediately after the trade was placed, a stop loss of 56 pips was set at 100.244 (Red horizontal line). Then, a take profit of 56 pips was set above the entry, at 101.364 (Lime horizontal line).

As you can see, the take profit was easily hit a few candles later.

If the second exit option was used here, as soon as the price hit the 101.364 level, we would move our stop loss to break even at 100.804. Then, we would close our long position with 238 pips of profit at 103.184 when an opposite signal was seen (Second Lime horizontal line).

Now let's take a look at Short trade conditions.

Short Entry Rules

1. Price must touch or cross above the Upper ForexAtron Band.
2. Stochastic must cross above the 70 level and then cross back down.
3. A bearish candle must close below the Upper ForexAtron Band.
4. When the above conditions are met, a sell order can be placed.
5. Set the stop loss just above the most recent Swing high.
6. Then set the take profit equal to stop loss (1:1 risk to reward ratio).
7. Another exit option is closing the trade when there's a reversal signal. In this situation, we will not be setting a take profit level. Instead, when price moves in our favor at the same amount as the stop loss, we need to move the stop loss to break even. Then we wait for reversal signal before closing the order. This way, we can get the maximum profits from strong trending markets.

Below, you can see the signals for a sell trade.

Let's take a look at a short trade example.

Short Trade Example

Here's a trade on the EUR/USD M15 chart.

Two candles before the actual entry, price has moved above the Upper ForexAtron band and Stochastic crossed above the 70 level. This was a sign to start looking for a short entry opportunity.

Then the next bearish candle crossed under the Upper ForexAtron band and closed below it. At the same time, Stochastic crossed under the 70 level. These 2 conditions gave the short entry signal and a sell order was placed at the open of the next candle at 1.31172 (DodgerBlue horizontal line). The stop loss of 9 pips was set at 1.31262 (Red horizontal line).

As soon as price hit the 1.31082 level, which is equal to the stop loss and is the first possible exit, the stop loss was moved to the break even (Lime horizontal line).

Five hours later, this short position was closed with 48 pips of profit at 1.30692 after a reversal signal was seen.

I have just shown you one of the best trading systems you can use to identify the exact turning points, where the market turns and goes in the opposite direction. For many traders, those swing points are the best possible entry levels because they have the biggest profit potential.

I have combined 2 very strong indicators in a unique way for you to have a greater advantage against most traders out there. I have also created the Forexatron trade assistant to make your trading easier in recognizing the exact entry signals.

With this system, it's my sincere hope that you will be as profitable as possible. Thank you very much for your time!

Best Regards,
