

Introducing the EASIEST way to trade pullbacks IMO:

This New "Pullback Solution" Indicator Could Help You Find WINNING Pullback Trades In Less Than 5 Minutes...

**As Close As It Gets To A Complete, AUTOMATED Trading Solution:
The Indicator Shows You High-Probability Entries and Exactly Where
To Place Your Stop Loss & Take Profit...**

Check out these amazing backtest results of a "Proof Of Concept" trading system we've built around this Pullback Solution indicator:

GBP/USD backtest results:

- Initial deposit: \$10,000
- Total net profit: \$14,860.50
- Maximal drawdown: 22.14%

Winning rate: 73.77%

EUR/USD backtest results:

- Initial deposit: \$10,000
- Total net profit: \$6,374.50
- Maximal drawdown: 17.59%
- Winning rate: 72.13%

S&P500 backtest results:

The strategy only takes long trades when trading indices. Here's a tip: You should consider taking only long trades when trading indices to increase your winning rate.

- Initial deposit: \$10,000
- Total net profit: \$16,137
- Maximal drawdown: 23.39%
- Winning rate: 84.75%

NASDAQ 100 backtest results:

The strategy only takes long trades when trading indices. Here's a tip: You should consider taking only long trades when trading indices to increase your winning rate.

- Initial deposit: \$10,000
- Total net profit: \$47,649
- Maximal drawdown: 26.69%
- Winning rate: 76.56%

Here's a teaser photo of Pullback Solution in action. Read below for the full details about this awesome indicator:

Hi there,

This would have been my dream strategy when I started out as a trader. It involves only 2 simple steps:

Step 1: Identify the current market trend.

Step 2: Wait for a pullback (you may call it retracement, or dip/rally, they're all the same thing). And then enter the market in direction of the current market trend.

Simple, isn't it? And if I had to guess, 90% of retail traders would get better results if they stick with this simple pullback strategy, instead of chasing that one elusive "magic" system.

Today we're taking pullback trading to a whole new level. Here's why:

We've just put the finishing touch to the all-new Pullback Solution indicator.

I might be biased, but I really think:

Pullback Solution is probably the best indicator ever developed for trading pullbacks.

Let me show you the last 7 trade setups that Pullback Solution gave me on GBP/USD. And then I'll explain exactly how it works:

First, the Pullback Solution indicator automatically identifies the current market trend.

If the current trend is up, then Pullback Solution will only look for buy (long) trade setups.

On the other hand, if the current trend is down, then Pullback Solution will only look for sell (short) trade setups.

This "Trend Filter" criteria may sound simple, in principle. But don't underestimate it. Because, as you will see in a moment, this principle can single-handedly make or break a trading strategy.

Second, once the current trend has been determined, Pullback Solution will scan the pair for high-probability entries for trading pullbacks.

And then the indicator will print on your chart the very best trade entries that have the highest probability of winning.

Next... and here's where it gets REALLY interesting:

There's a reason we aptly name this indicator "Pullback Solution".

Because it's as close as it gets to a COMPLETE, AUTOMATED solution for trading pullbacks:

Once a trade entry is triggered, the indicator will show you **the best place to place your stop loss and take profit.**

In other words, Pullback Solution gives you EVERYTHING on a silver platter: High-probability trade entry, stop loss, take profit...

It does all of the hard work for you. You no longer have to guess when to enter or where to set your stop loss & take profit. Everything's taken care of. You don't have to lift a finger.

And if you ask me...

Pullback Solution is the EASIEST way to profit from trading pullbacks IMHO...

To illustrate its power, we've developed a simple trading strategy built around Pullback Solution as our "Proof of Concept". We would enter whenever the Pullback Solution indicator gives us an alert. And we would exit the trade when the market price closes above/below a short-term moving average.

Below are the backtest results of this stupid simple strategy on GBP/USD, EUR/USD, S&P 500, and NASDAQ 100:

But first, **our full disclaimer:** These are backtest HYPOTHETICAL results. We don't control the future. We don't know how this strategy will perform in the future. Trading is very hard and risky. Most traders lose money.

GBP/USD backtest results:

- Initial deposit: \$10,000
- Total net profit: \$14,860.50
- Maximal drawdown: 22.14%
- Winning rate: 73.77%

EUR/USD backtest results:

- Initial deposit: \$10,000
- Total net profit: \$6,374.50
- Maximal drawdown: 17.59%
- Winning rate: 72.13%

S&P500 backtest results:

The strategy only takes long trades when trading indices. Here's a tip: You should consider taking only long trades when trading indices to increase your winning rate.

- Initial deposit: \$10,000
- Total net profit: \$16,137
- Maximal drawdown: 23.39%
- Winning rate: 84.75%

NASDAQ 100 backtest results:

The strategy only takes long trades when trading indices. Here's a tip: You should consider taking only long trades when trading indices to increase your winning rate.

- Initial deposit: \$10,000
- Total net profit: \$47,649
- Maximal drawdown: 26.69%
- Winning rate: 76.56%

Now you understand why I love trading pullbacks so much!

And while we're at it, here's an important tip I'd tell my younger self:

When you first start out as a trader, focus on these 4 instruments only: GBP/USD, EUR/USD, S&P500, and NASDAQ 100.

These instruments are well-known for their tendency to trend AND their smooth price action. That's the reason why it's a lot easier to trade.

By the way, did you notice that...

The default settings for our stop loss and take profit ALWAYS ensure that the Reward:Risk ratio of EVERY trade is 2:1.

Which means, when you lose, you'll lose only a little. But when you win, you'll win BIG.

And that also means you only need to win less than 50% of the time in order to make a profit!

Next, let's analyze how the Pullback Solution indicator works on multiple currency pairs as well as other instruments:

GBP/USD:

Russell 2000:

S&P500:

EUR/USD:

Anyway, my favorite part about Pullback Solution is that...

Since pullback is a UNIVERSAL trading concept, and it works on ANY timeframe and ANY currency pair (any financial instrument for that matter)...

The Pullback Solution indicator works equally well for day traders, swing traders, and long-term traders...

Here's another important feature that you need to be aware of:

Our indicator filters out a lot of false signals,

so you'll get the VERY BEST trade setups.

And by the way, it's very very easy to trade with Pullback Solution because...

**The indicator gives you all kinds of alerts:
Pop-up, Sound, Email, and Push
Notifications as soon as a setup appears...**

Plus... you're in total control. For example, you can change the color of any text, entry, stop loss & take profit.

In addition, the indicator is extremely flexible: Works on ANY currency pair... ANY time-frame.

It also works on indices, stocks, commodities, and futures. Virtually any instrument you could think of.

But Hang On... We're Not Done...

Further down this page, you'll notice there are TWO purchase options you can choose. You can get Pullback Solution indicator alone for an insanely generous price I'm giving the first 200.

Or... you can invest a little more and get the **Indicator Vault& Premium package.**

So What's Inside The "Premium" Package?

First off, you get the Pullback Solution indicator. And on top of that, you'll also get access to **the ENTIRE collection of 49+ top-rated custom indicators.** Including Pullback Solution, Trend Focus, Swing Force, Scientific Scalper, Logic Day Trading, Candle Meter, Precision Strength Meter, Drag & Drop Volume Profile and more.
