# TDO Pro System

Welcome Forex traders,

In the next few pages, I will show you a proven system, that I have been using through my last six trading years. This system proved for me that it can pass the test of time with good profits.

The "Money Ocean" MT4 Signal

Before introducing my system to you I want to show you one of my trading accounts that I used to test the TDO Pro system, so you can build an idea about what to expect from it.

As you can see, the TDO Pro System kept me inside the market for 11 weeks with a net compound return of 209%. So, I earned 19% on average every week. I used "Bermaui Manual EA" place the trades then I leave it to exit with profits. Here is my capital growth curve:
As you can see, the growth curve is steady and clean without serious drawdowns. Let's analyze this account more:

| Account | Trading history | Statistics | Risks | Slippage | Description | Reviews | What's new | ··· |

Trades:	1 362	Recovery Factor:	9.62
Profit Trades:	968 (71.07%)	Long Trades:	660 (48.46%)
Loss Trades:	394 (28.93%)	Short Trades:	702 (51.54%)
Best trade:	1 327.67 USD	Profit Factor:	2.79
Worst trade:	-1 259.21 USD	Expected Payoff:	15.34 USD
Gross Profit:	32 579.51 USD (120 779 pips)	Average Profit:	33.66 USD
Gross Loss:	-11 693.18 USD (84 005 pips)	Average Loss:	-29.68 USD
Maximum consecutive wins:	26 (164.82 USD)	Maximum consecutive losses:	14 (-2 170.13 USD)
Maximal consecutive profit:	2 236.37 USD (4)	Maximal consecutive loss:	-2 170.13 USD (14)
Sharpe Ratio:	0.14	Monthly growth:	59.98%
Trading activity:	95.11%	Algo trading:	87%
Max deposit load:	49.74%		
Latest trade:	20 hours ago		
Trades per week:	105		
Avg holding time:	16 hours		

Money Ocean made 1362 trades, from which 968 (71.07%) is in profits. My profit factor is 2.79 and my recovery factor is 9.62. My maximum consecutive wins are 26 trades in a row, while my maximum consecutive losses are just 14 in a row. The drawdown was 16.4%.

I traded a lot of currency pairs because the TDO Pro System focus on the trend and it catch profits from any strong movement on the chart.

Sell Buy

So, that is what you can expect from my system. I wanted to be realistic with you and I didn't proclaim that I am a genius or an extra-ordinary trader. If you don't like my system, then it's OK for me. If you can use it to develop a better idea, then I won't regret it. As for me this system is more than enough.

TDO Pro System Components

The system consists of three tools that works together.

1. **Select 28**. This is an indicator that use a special algorithm to help in selecting the currency pair to trade (the most trending pairs in the market).

2. **True Direction Oscillator**. I use TDO to figure out if the currency pair that "Select 28" has chosen have enough momentum to go through or not.

3. **Bermaui Manual EA**. I push the buy/sell button to take the trade and wait for the expert advisor to close it.

Before I talk about each tool with some details I will assume that you already bought or rented my "True Direction Oscillator (TDO)", read the manual to understand the idea behind the indicator, explored all TDO features, read the frequently asked questions blog, and watched the video library. But if not, then I suggest to do it now, and here are the links:
- TDO User's Manual: https://www.mql5.com/en/blogs/post/717970
- TDO F.A.Q & Parameters: https://www.mql5.com/en/blogs/post/722015
- TDO video library: https://www.mql5.com/en/blogs/post/722018
- TDO Demo that works on EURUSD, H1 https://www.mql5.com/en/market/product/43081
- TDO Real for MT4 Only https://www.mql5.com/en/market/product/12914
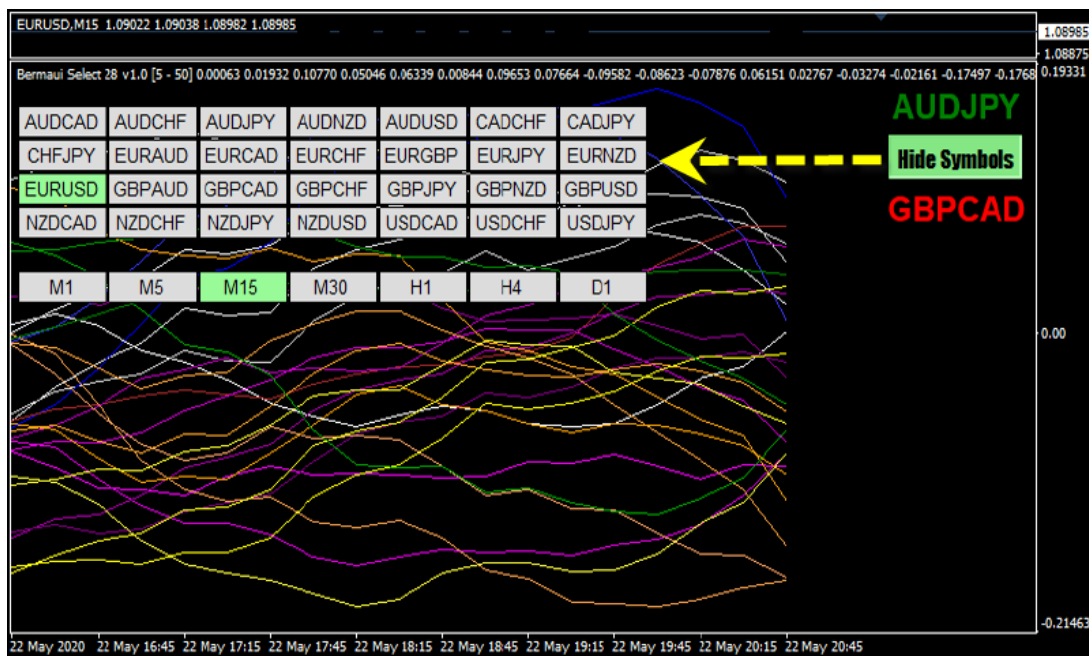

1. Select 28 Indicator

This indicator uses a special algorithm to measure the pure momentum for each of the 28 currency pairs, then it displays the strongest and weakest between all of them.

When you will attach the indicator to your chart it will draw 28 lines with different colors that represent the pure momentum of those currency pairs.
What is important here is the strongest and the weakest currency pairs. The indicator will display their names on the right corner.

Once you know the strongest and the weakest pairs you can open their charts by clicking on the symbols form the "Symbols Panel".

By this the "Select 28" will help you to find the trendiest currency pairs between all of them. Those with the lowest number of false breakouts and the highest return to risk ratio.

After that we have to judge those currency pairs to see if the trend is still strong to gain some profits from it and here, we come to the TDO rule.

2. True Direction Oscillator

In this section I will assume that you already read the TDO Manual and understand how to set its parameters. TDO is full of capabilities that can help traders to make a good fortune in the FOREX market if they used them well. It is a very important tool for traders who trade manually by their hands without using automatic trading tools like Expert Advisors.

In TDO we have one important parameter that we will use. That is "**First TDO Period**" found in the first section from TDO parameters:

We will change the TDO 1st period from the default to **three**. By doing so TDO line will have the cycle of **48** candles.

From my point of view, I think that FOREX markets follow a cycle of 50 candles on average. I use the 50 candles cycle for more than six years until now and it gives me good results.

What I mean by this is that I give a special interest to indicators with 50 days of calculations. Like the 50 days moving average or the RSI 50% Level.
That is why we will set the "TDO First Period" parameter to 3. So, we make the TDO Line calculated through 48 candles, which is almost 50 candles cycle.

Now all you have to do it to make sure that price candle moves in a trending motion.

If "Select 28" suggested a strong pair then make sure that it builds higher highs and higher lows like this:

If "Select 28" suggested a weak pair then make sure that it builds lower highs and lower lows like this:

After that use the "Bermaui TDO EA" to pull the trigger to buy or to sell.

3. Bermaui Manual EA

The expert advisor parameters are designed to be user friendly. It works depending on the grid system.

When you add it to your chart it will show like this:

Use the buttons to buy or sell depending on the TDO Pro System. The expert advisor will use the averaging mothed to exit from the trade on profits.

Conclusion

From all the technical analysis proverbs and words of wisdom that I heard and read about trading through my life, there is one sentence that has proven itself. That is "*The trend is your friend*". Classifying the charts that we trade depending on their trending activity is a very important element in determining any trading success. Charts that move in a clear trend should be treated with trend following systems. But how can we sort charts depending on their trending behavior?

One of the best and easiest ways that I found to do so is to scan the whole market or the trading basket of charts with the "Select 28" indicator.

After that, the trader examines the selected charts with True Direction Oscillator (TDO) to figure out if the trend is still healthy to make some profits from it.

The last thing to do is to pull the trigger depending on Bermaui TDO EA which works as a money machine that extracts money from the Forex market.

By practicing on how to use the three tools a trader can achieve his trading goals by making a good compound return.

I hope that you can find this trading system a good investment tool for you.

Enjoy the game

Muhammad Al Bermaui, CMT
