Remember to show all pairs in the list of pairs or the EA could not update itself during **SCANNER** use.

FxIB : Send notification to mobile MT4

If you want to send notification to mobile just open Tools > Options and go to Notification TAB and put into METAQUOTES ID your ID of MT4 Android/IOS app (you can find it on setting of mobile app)

This is the main menu of FxOB where to start the EA working on chart and show up analysis.

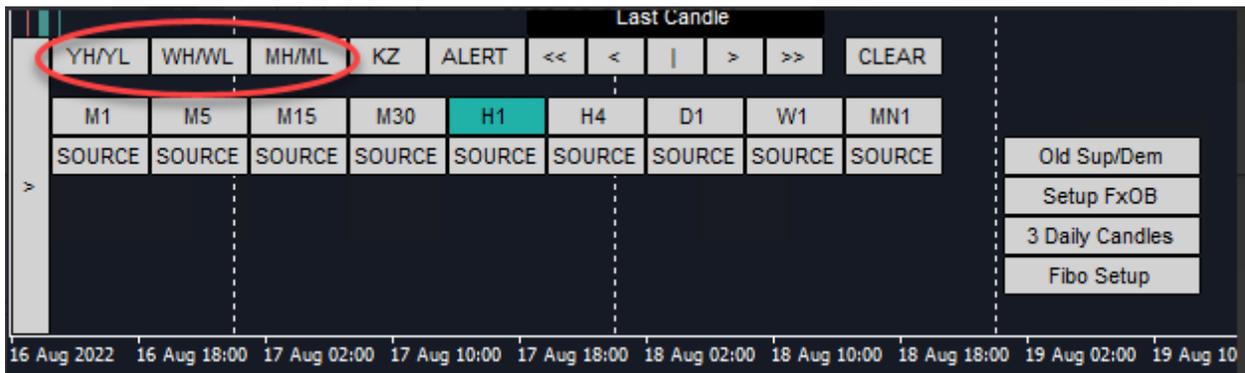

This menu let you visualize the :

YHL : Previous Day High / Low

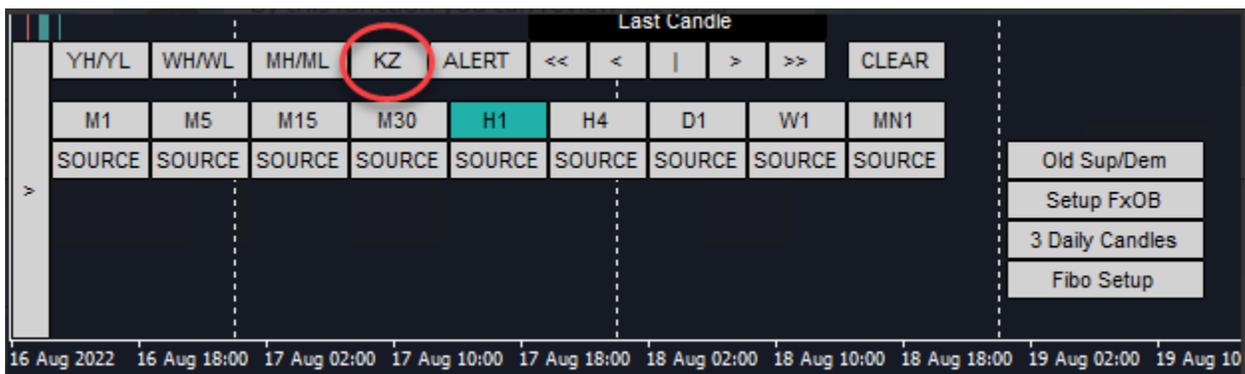

WHWL : Previous Weekly High / Low

MHML : Previous Monthly High / Low

Why we use it? Cause outside ranges the liquidity is sitted and on that zones we could expect flip zone, reversals, pullbacks etc.

This KZ button shows the Sessions Asia / London / US and if pressed again shows the KillZones based on US OPEN TIME.. ICT knowledge for DXY and USD trades correlations.

This is a complex function.

By this function you can review the past going back and stopping the EA analysis to the candle where the violet line is positioned. You can check the behavior on how the source (supply and demand) and the EA analysis change candle by candle.

<< Go back quick

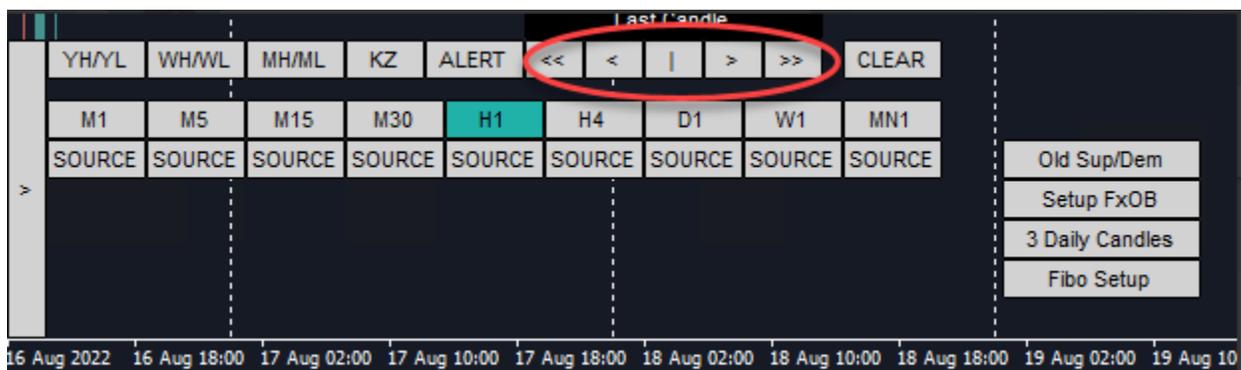

< Go back 1 candle

| Go forward 1 candle

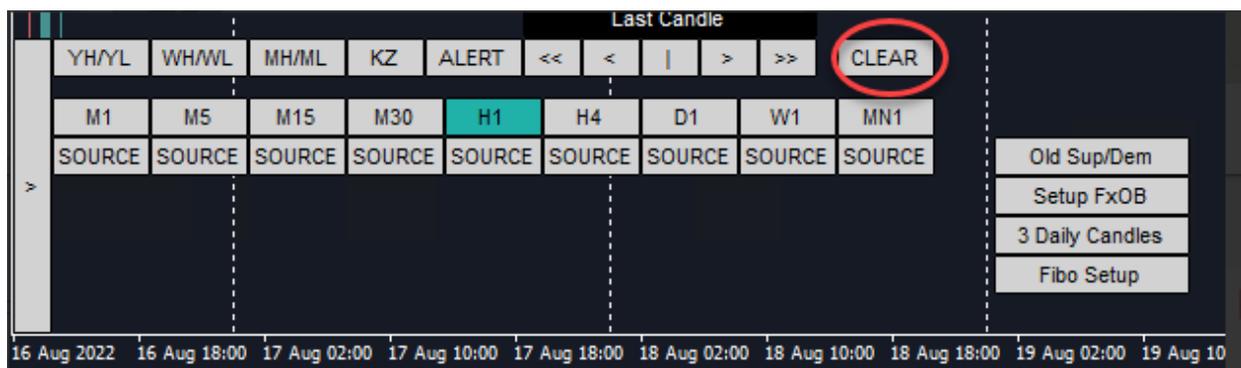

> Go forward 1 candle

>> Go forward quick

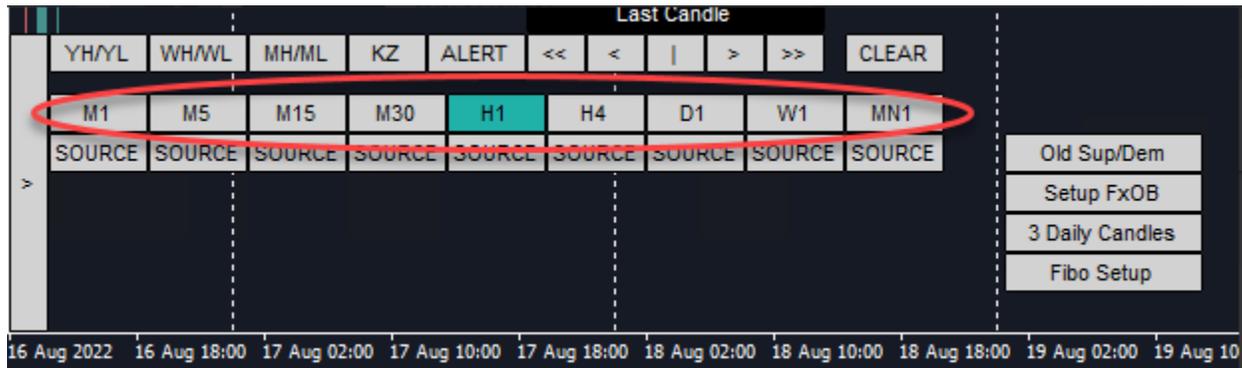

Once you moved the EA back from the current candle, remember to come back by pressing | or the EA won't update itself but will stay freezed on the candle selected.

Turn off all the Functions enabled and clean the chart.

Switch the Timeframe by pressing one you want to see.

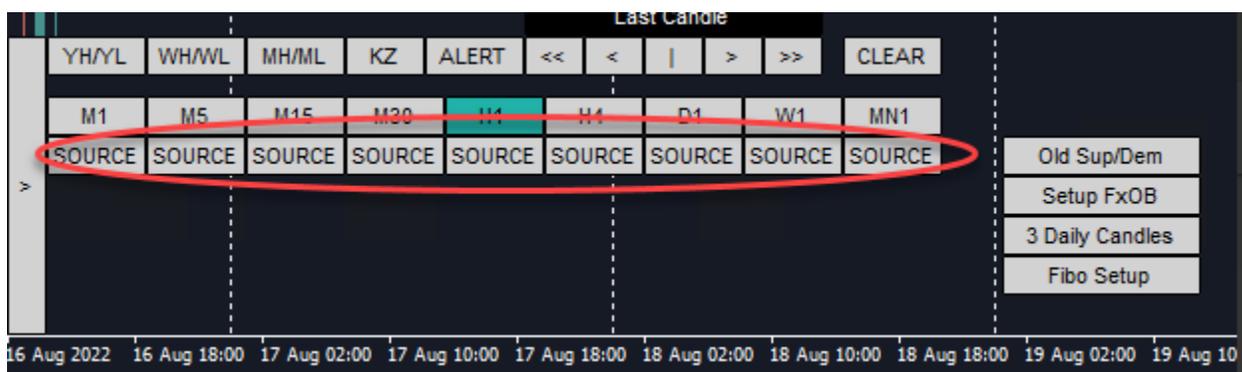

SOURCE is the main button that let the EA start the complex analysis.

SOURCE once press gives the evidence of a first history of premium/discount zone and so the equilibrium line, dotted if mitigated, solid if never touched.

The two dots are the current High and Low that determine the last Supply and Demand and the bias of the current leg.

After pressing the **SOURCE** button, you can see a new button list appear below it.

D or P and a % is the level of price into the LEG (RANGE)

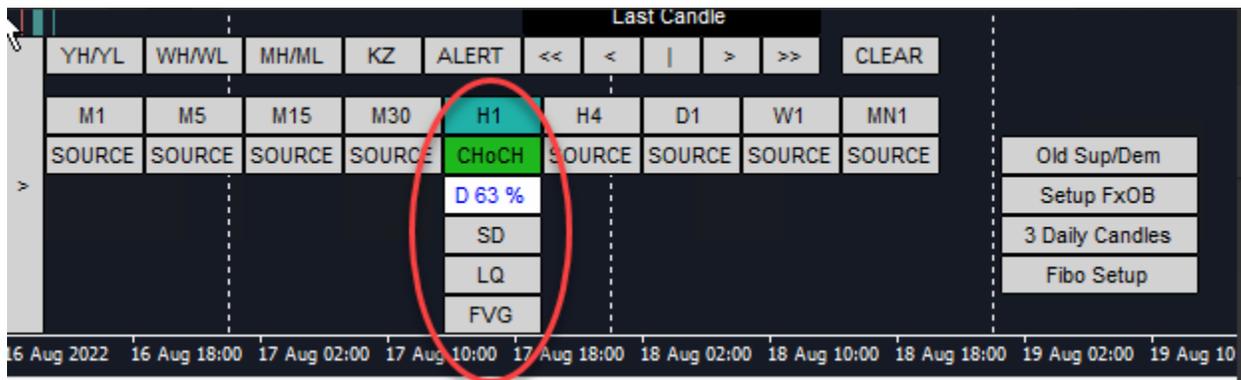

P = Premium Zone

D = Discount Zone

SD = Supply and Demand module

LQ = Liquidity module

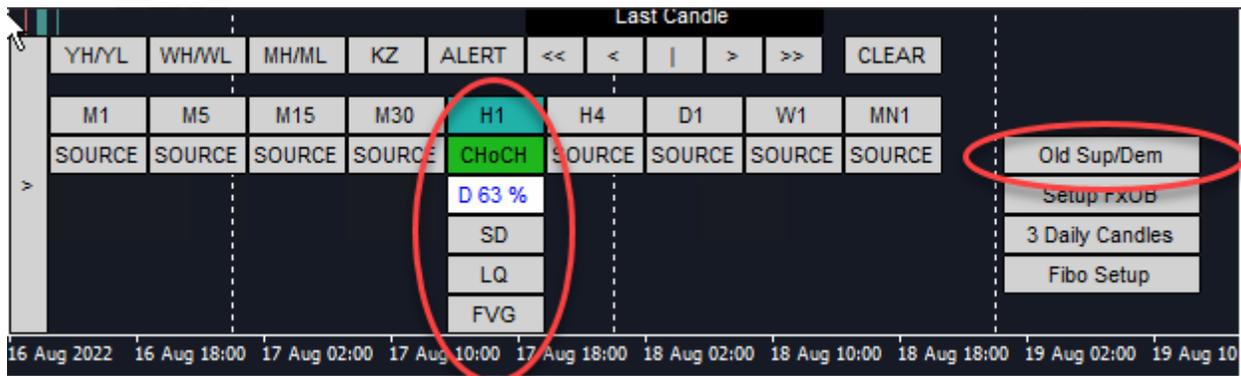

FVG = Inefficiency module

By SD button you could get from the EA the chart with the Market Structure analysis in front to your eyes.

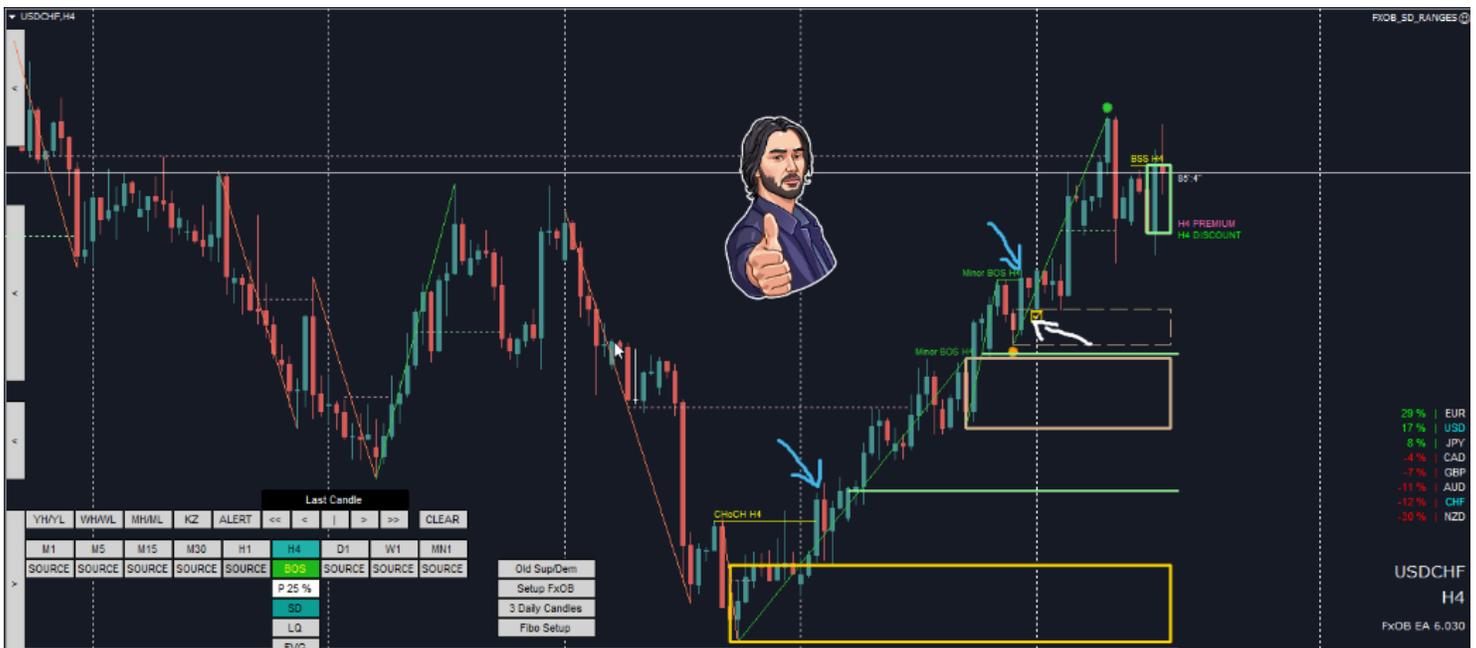

The analysis includes: Supply / Demand, BOS, CHoCh, orderflow, mitigated and unmitigated zones.

The button you see on the right, OLD supply/demand extend the analysis finding the closest Supply or Demand opposite to the current one you are

So if you are on bullish trend, and have the demand well intact, you could see, according to the history of the price, the view of the Supply / Premium zone / Inefficiency zone that could stop the price to go up, taking a pause, making a swing, or drop back.

This is how the Market Structure appears by pressing Source and SD for example on the chart you see as example.

And by OLD Sup/Dem enabled you could see also the old valid supply that can stop the rally.
