This indicator can be used to identify the trend as well as a kind of dynamic support and resistance in entering and exiting the transaction.

7: Moving Origin indicator 100-200 and the purpose of its use: It is a trend indicator that can be used to identify the trend and also as dynamic support and resistance in entering and exiting the transaction.

8: MACD oscillator and the purpose of its use: a type of oscillator that is used to detect trends, strength, divergence, detect major and minor pivots in combination with Fibonacci, and as a trigger to enter into a transaction.

9: H bull N bear oscillator and the purpose of its use: it is a kind of oscillator to detect the strength between buyers and sellers and can be used as a trigger to enter the transaction.

10: OBV indicator and the purpose of its use: This indicator is not calculated based on prices, but based on trading volume. The idea behind this indicator is that we have two types of traders in the market, large traders and small traders. The strength of OBV is that based on trading volume, future trends and reversal points can be predicted to some extent. When major players buy or sell stocks, the volume changes a lot, but the price reacts immediately. It doesn't give, but after some time these volume changes affect the price and trend and can be used as a trigger to enter the transaction.

11: Chaikin Money Flow indicator and the purpose of its use: CMF indicator, which is one of the most important indicators of technical analysis and means measuring the amount of money flow in a certain period of time. It is used as a trigger to enter the transaction.

12: Cumulative Delta indicator and the purpose of its use: The unique indicator is used to have a correct view of the side ratio and volume bias of the buyer and seller, to detect divergence and as a trigger to enter the transaction.

13: Volume Profile indicator and its purpose: Volume Profile is an indicator that shows volume in price (Volume Profile shows what price levels are important for large trading institutions. Therefore, it shows you strong support and resistance areas. or in other words, it shows the volume at a price level). No other indicator like volume profile can show you where the big trading institutions have been willing to buy and sell! 99% of all standard indicators are calculated with only two variables: price and time. Profile volume is calculated with three variables: price, time and volume. It can be used to detect important price levels, targets and entry and exit triggers.

14: Order block indicator and the purpose of its use: a professional indicator to specify the areas of order blocks in different times, it is better to use it in Rejection mode.

15: SUP & DEM BOX indicator and the purpose of its use: to determine the supply and demand areas in different time frames

16: M-Candle indicator and the purpose of its use: to show the box candle with the desired time frame in lower time frames and to help better understand the market movement through multi-time frames, as well as help to have a simultaneous view of swing and scalp in the chart

17: Pipe Value Indicator and the purpose of its use: to show the maximum movement range of the current candle based on the pipe

18: XU-SEMAFOR indicator (strategy 1) and the purpose of its use: It is an auxiliary tool and a warning of a change in the direction of the chart by Arrow.

19: Forex Prediction indicator and the purpose of using it: a unique indicator to know the volume delta in candles and also to know the percentage of buyers and sellers instantly, this indicator is used in the 1 minute time frame and in the Watch List and for The final confirmation when entering the position is very useful. Using this indicator causes some indicators to not work and some problems in drawing areas and lines, that's why we use this item on a separate template called Watch List Template.

20: Tick On Chart Histogram indicator and the purpose of its use: a unique indicator to show the smallest bias and changes in volume at the moment, this indicator is used in the 1 minute time frame and in the Watch List and is very useful for final confirmation when entering a position LT is.

21: Fibo golden zone indicator and the purpose of its use: To show Fibonacci levels and help determine how much a wave is moving relative to the previous wave

Trading expert:

1: Expert Auto SL & TP and the purpose of using it: Expert to determine the profit limit, loss limit and stop trail automatically in each transaction. The purpose of using this expert is to make it easier to set the profit limit, loss limit and stop trail compared to the manual mode, calculated entry into the transaction taking into account the ratio of risk to initial reward and reducing the risk of the transaction due to the setting of the stop upon entry, as well Help discipline and stress control in trade. One thing that needs to be said about this expert is that due to the difference in the number of numbers in the symbols, it is necessary to define the PIPE DECIMAL section in the expert. For example, for gold, you should set PIPE DECIMAL=0.1 and in currency pairs like EURUSD, set PIPE DECIMAL=0 so that the expert works correctly.
