

Trading setup:

You need three screens to work

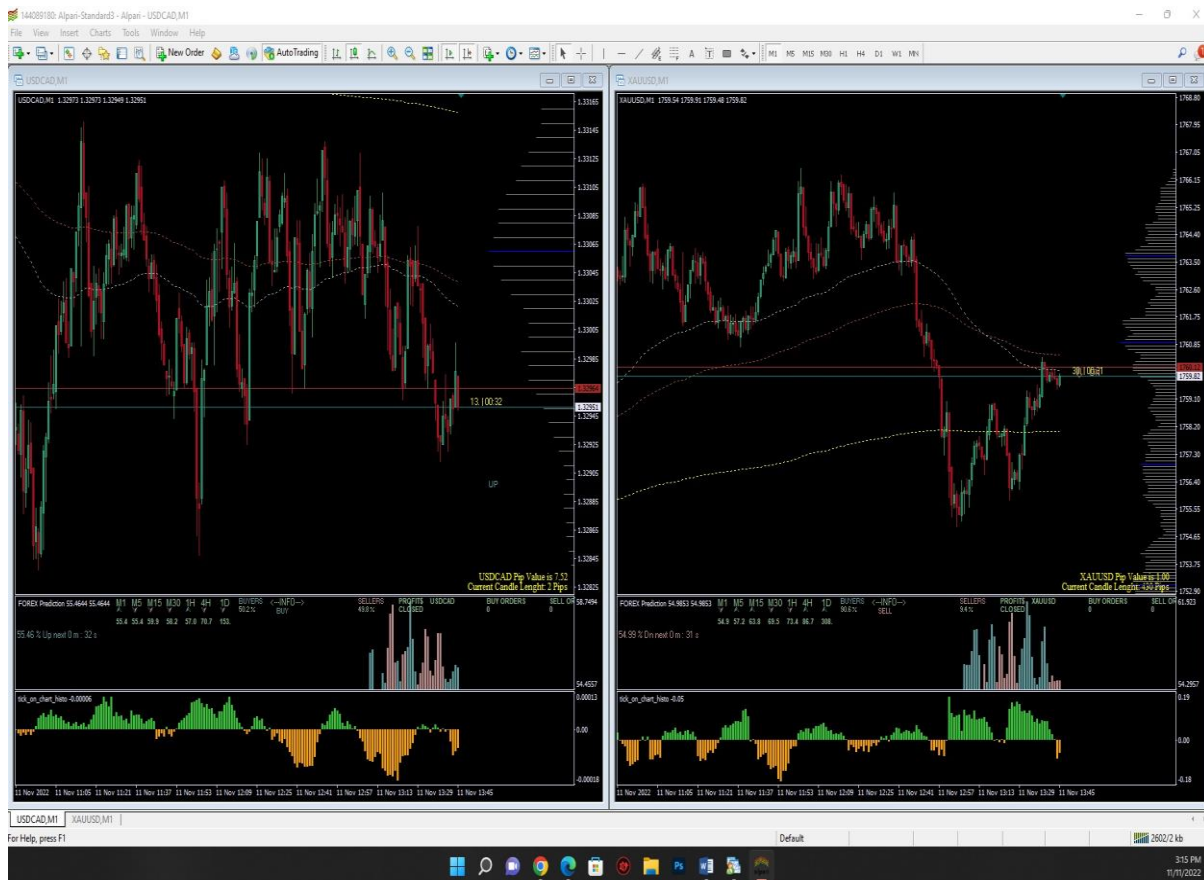

Screen 1: showing the terminal window.

Screen 2: It is our main chart , You can see the trading symbol in 5 minutes and 1 minute at the same time

Screen 3: It is our watch list , and it shows a trading symbol in 1 minute and an asymmetric currency in 1 minute

How to create a watch list:

You will need two Metatrader 4 accounts to have a watch list, which of course you will need two accounts to log into Metatrader, so first go to your broker and open another trading account on Metatrader 4. To create two Metatraders, first right-click on Metatrader 4 in Windows and select the properties option and write down the installation location, then go to the installation location and copy the Metatrader folder and paste it with a new name. Enter the folder and launch the new Metatrader. Then we log in with the new business account and run the steps to set up the template for the second Metatrader
