A GUIDE THROUGH THE WORLD OF INTERBANK TRADING CONCEPTS

MARKET STRUCTURE MASTERCLASS

In Market Structure MasterClass Discussion:

- ICT Market Structure Essentials
- The Higher Time Frames Protocol
- ICT Market Structure Advanced
- ICT Advanced Market Structure with Order Blocks
- Swing Projections for Market Structure Targets
- High Probability Trading vs Low Probability Trading

THE CODE BEHIND TRADE IDEAS

The Code Behind Trade Ideas:

There are only two kinds of trades we can take, a low-probability trade and a high-probability trade.

HPT is a trade that is in alignment with the Long-term Perspective and Intermediate-term Perspective.

LPT is a trade that is against the Long-term Perspective and when Intermediate-term Perspective Retraces.

We treat these two kinds of trades differently hence the code behind trade ideas.

High Probability Trades:

Since these trades are in alignment with the Long-term Perspective and Intermediate-term Perspective, it is in your best interest to let the entire trade run instead of closing half of it or closing it all out entirely.

In terms of a target, High Probability Trades have a further target.

A black and white photograph of a sniper in silhouette, aiming a rifle from a wooden crate. The sniper is wearing a helmet and a uniform with a patch on the sleeve. The background is a large window with a grid pattern, showing a blurred outdoor scene. The text "ONE SHOT ONE KILL TRADE EXAMPLE" is overlaid in white, bold, sans-serif font across the center of the image.

Braveheart Trading

Dedicated to Freedom and for Reaching Your Full Trading Potential.

Low Probability Trades:

Since these trades are against the Long-term Perspective, it is in your best interest to pay yourself partials around logical areas..

Since at any moment the Intermediate-term Perspective can snap back into alignment with the Long-term Perspective, it makes sense and to close partials and pay the Trader.

Whether that be 10% or 50% is up to you; the point is to pay yourself sooner rather than later.

In terms of a target, Low Probability Trades should have a closer target.

Trades back in alignment with the Long-term Perspective.

POOR PERFORMING TRADING HABITS

1. Framing your trades without any context of the Long-term Perspective

As mentioned previously, to find success with Interbank methods and concepts... everything needs to be following the Long-term Perspective.

A Fair Value Gap or Order Block doesn't hold because of the name

Everything needs to be framed under the right context and narrative. Only then these Interbank patterns will unlock for ultimate precision.

Draw on Liquidity

With Context!

You can now see how these A+ Trading setups are expected to fail.
 With your trust in Institutional Sponsorship, even if the opposing setup is A+, we expect it to fail.

2.Rushing Entries at Weekly Open

Trading is not like any other business, more trading hours do not amount to better trading results.
You can't force a trading setup when the price is not bound to move.

Banks and Financial Institutions understand that Retail Traders are in a hurry to find trades on Market Opens.
Knowing this, prices will stay stuck and trap as many Retail Traders inside the range.
This is to accumulate as much Retail Liquidity in the market above and below.

Banks and Financial Institutions will then use the Retail Liquidity for their entries and exits.

Think like a Market Maker.

3.Trading Outside of Kill Zones

Similar to any real-world business, the financial markets have their respected operating hours.

Assets that include the Euro or Pound will move during London hours.

Assets that include the Australian Dollar, New Zealand Dollar, and Yen, will mostly be during Asian Hours.

Aspiring Traders fall victim to thinking that the markets move 24 Hours a day, 5 days a week.

The truth is, the highest amount of market volume is generated within selected hours a day, but candlesticks will print 24 hours a day, 5 days a week regardless.

Since the highest amount of volume is generated during these peak hours, important highs and lows also form within them.

If you want to see a fast response, you must execute your trade during these peak hours.

Friday

13:30 12 May '22 15:00 16:30 18:00 19:30 21:00 22:30 13 May '22 00:00 01:30 03:00 04:30 06:00 07:30 09:00 10:30 12:00 13:30 13 May '22 15:00 15

A close-up, low-angle shot of a chess king piece on a checkered board. The king is a light-colored piece, possibly white or light grey, with a tall, tiered crown. It stands on a dark square of the board. The board itself is made of alternating light and dark squares, creating a strong geometric pattern. The background is dark and out of focus, emphasizing the king and the board. The lighting is dramatic, coming from the side, casting a soft shadow of the king onto the board.

HIGH PERFORMING TRADING HABITS

1.Framing Trades on Higher Time Frame Levels

After following this video series, it must be clear at this point that the Long-term Perspective has the biggest influence on Price Action. Therefore, make it a habit to frame your trading ideas around a Higher Time Frame level before you maneuver into the Lower Time frame.

Trading based on a Higher Time Frame level will also provide Higher Risk to Reward setups. If you focused solely on trading based on Higher Time Frame levels... you would only need to be correct 30% of the time if focusing on 3:1 Reward to Risk setups.

Develop patience for the price to trade at these areas. Once a Higher Time Frame level becomes activated, expect large range candles for multiple days due to the bulk of the volume being generated from it.

It's then your duty as a Trader to navigate that Order Flow from Intermediate-term and Short-term Perspectives.

2.Choosing key levels that align with Institutional Order Flow

After a Higher Time Frame level becomes active, that will become the Parent Order Flow for all the subordinate moves to come. You must select levels that align with that Order Flow.

First, wait for confirmation that the level is active with a Market Structure Break.

Second, wait for an Intermediate Swing Point following that aligns with the Parent Order Flow

Third, frame your trade idea on that Intermediate Swing Point, then look for trading setups from the Short-term Perspective.

Next, we will talk about High Performing habits from a Short-term Perspective.

3. Trade based on Confirmation, not Anticipation.

With the context and framework from the Long-term Perspective and Intermediate-term Perspective, execution from the Short-term Perspective should be the easiest part.

These 2 perspectives do the anticipation and the short-term perspective does the confirmation.

The job of the Short-term Perspective is to find your Entry Pattern Fractal within a Kill Zone.
That's it.

You must know your exact Entry Pattern.

Do you prefer a Stop Run into a Fair Value Gap? Stick with that.

Do you prefer Order Blocks with a Fair Value Gap? Stick with that.

We do not gamble, we execute on solid setups.

Know and study your Entry Pattern to the point where you understand and trust its characteristics.

INTERBANK ROUTINE & SCHEDULE

Every Sunday, you want to do the following:

Step one: Find The Market Narrative

This starts with a Proper Analysis of the Long-term Perspective and finding Higher Time Frame Levels

1. Start with the Dollar, then make your way into pairs you trade.
2. Find a Draw on Liquidity for Price
3. Wait for these Higher Time Frame Levels to become active before formulating any Trade Plan on the Lower Time Frames

Step Two: Create a Framework

Study the Economic Calendar and mark out the main News Drivers for Dollar.

- 1.If News is late in the week, anticipate mid-week consolidation and expansion Wednesday New York Session, Thursday, and Friday.
- 2.If News is early in the week, anticipate for Weekly Highs/Lows to form Monday, Tuesday, or Wednesday.

Step Two: Create a Framework

After building an idea of when Weekly Highs and Lows will form, it's time to find where.

Identify Price levels that align with Institutional Order Flow from the Intermediate-Term Perspective.

1. Mark out Market Structure Breaks if any.
2. Mark out Intermediate-term Swing Points if any
3. Mark out where Prices will be in a Premium VS Discount
4. Mark out potential Intermediate-term Swing Points if any.

Ask Yourself the Following: Monday through Friday, what News Events can cause volatility to activate these levels?

Step Three: Scheduling the when to be active.

After building a narrative and framework, you should see clearly where the price will want to trade towards next.

Its either:

- 1.To a Higher Time Frame level which is untested
- 2.Retracing within a Dealing Range on the Intermediate-term Perspective

You now have a plan for where and when the price will print important highs and lows.

You now must be active from the short-term perspective to participate in entries.

Schedule those days and specific hours and ONLY be trading then.

This is exactly when the markets WILL move, and therefore any time spent in front of the charts, not in those hours is a waste of precious time.

Action Step:

Create your Interbank Trading Routine and Schedule to use it EVERY Sunday.
