Candles

Dedicated to Freedom and for Reaching Your Full Trading Potential.

| Group                     | Pre-Test | Post-Test | Follow-Up |
|---------------------------|----------|-----------|-----------|
| Control Group (Green)     | ~55      | ~65       | ~60       |
| Experimental Group (Blue) | ~60      | ~75       | ~70       |
| Comparison Group (Black)  | ~65      | ~80       | ~75       |

The chart displays price data over time. The y-axis is labeled with values 0, 20, 40, 60, 80, and 100. The x-axis shows the years 1999 and 2001. In 1999, there are three green candles. The first green candle has a high of approximately 85 and a low of approximately 45. The second green candle has a high of approximately 95 and a low of approximately 75. The third green candle has a high of approximately 100 and a low of approximately 85. A red horizontal line is drawn at a price of approximately 45 in early 2000. In 2001, there is a large black candle with a high of approximately 100 and a low of approximately 0.

The chart displays three candlesticks. The first is green, indicating a bullish session. The second is also green, showing another bullish session. The third is black, indicating a bearish session. A red horizontal line is drawn across the chart at the level of the first bar's close, likely representing a support or resistance level.

# Why do people fail with Order Blocks?

An ICT Order Block is a candlestick pattern.

All candlestick patterns such as Fair Value Gaps or Retail Chart Patterns will fail if they are opposing the Institutional Order Flow. Therefore, the reason traders fail with ICT Order Block is because they are **failing to trade aligned with the Banks and Financial Institutions.**

If you are trading an ICT Candlestick Pattern or a Retail Chart Pattern that is aligned with the Banks and Financial Institutions, the pattern will have success.

# The Key to Selecting Order Blocks

By understanding that Candlestick Patterns succeed if they are following Institutional Order Flow, the key to selecting Order Blocks is within [determining what the current Institutional Order Flow is](#).

Are we seeing Bullish Institutional Order Flow?

Are we seeing Bearish Institutional Order Flow?

We can determine the Institutional Order Flow by determining what the Narrative is.

Narrative can be found from a Long-term Perspective since the Banks and Financial Institutions Operate on the Higher Time Frames.

ICT MARKET STRUCTURE WITH ORDER BLOCKS:

# NARRATIVE CREATES FRAMEWORK

# NARRATIVE AIDS FRAMEWORK

A high-contrast, black and white photograph of a whale's tail fluke emerging from the ocean. The tail is dark and textured, with water droplets visible on its surface. The background is a dark, rippling sea under a dark sky. The text 'NARRATIVE AIDS FRAMEWORK' is overlaid in a bold, white, sans-serif font across the center of the image.

Dedicated to Freedom and for Reaching Your Full Trading Potential.

## Narrative aids Framework

The Market Structure Shifts you see then have context.  
The Imbalances and Displacements you see then have context.  
The Order Blocks you see then have context.

# Narrative aids Framework

All of these Candlestick Patterns follow the Institutional Order Flow generated from the Long-term Perspective. We can ONLY then start classifying swing points and selecting the correct levels to take action on.

FRAMEWORK SELECTS ORDER BLOCKS

# Framework selects Order Blocks

With help from Narrative, we have directional bias and can classify our swing points.

## Framework selects Order Blocks

Intermediate-term Swing Points give us a Framework.

When choosing Order Blocks, we want Price to establish an Intermediate-Term Swing Point first

# Framework selects Order Blocks

After an Intermediate-Term Swing Point has been established, we can use Order Blocks to get in sync with Institutional Order Flow.

## There is a Hierarchy to Order Blocks.

There is a Parent Order Block (The OB that creates the Swing) and Subordinate Order Blocks (Speed Bumps)

The purpose of a **Parent Order Block** is to create the **Intermediate-Term Swing Point**.  
The purpose of **Subordinate Order Blocks** is to send prices toward the Draw on Liquidity.

# INTERMEDIATE-TERM SWING POINT AND INSTITUTIONAL ORDER FLOW

Clean Highs

Rebalance

## Intermediate-Term Swing Point and Institutional Order Flow

Intermediate-Term Swing Points create swings that lead to Higher Time Frame Objectives.

## Important Reminder!

The closer we get to our objectives, the lower probability the subordinate Order Blocks become. This is because price trades more and more into Oversold/Overbought Conditions. It's Important to always be aware of the Premium vs Discount conditions.

ICT MARKET STRUCTURE WITH ORDER BLOCKS:

# FRAMING A SETUP WITH HIGH PROBABILITY ORDER BLOCKS

A dramatic sunset over the ocean with two orcas in the foreground. The sun is low on the horizon, creating a golden glow that reflects on the water. The sky is a mix of orange, yellow, and dark blue. In the foreground, two orcas are visible, their dark bodies and white patches contrasting with the dark water. The orca on the right is more prominent, with its dorsal fin clearly visible. The overall mood is serene yet powerful.

**FRAMEWORK & NARRATIVE**

**=**

**HIGH PROBABILITY ORDER BLOCK**

## Framing a Setup with High Probability Order Blocks

Before we start finding setups on the Short-term Perspective, we must use the framework from the Intermediate-term perspective.

Therefore, violation of an Intermediate-term low will become a cost of business with logic and reasoning.
