## **Disclaimer**

Trading is considered a high-risk speculative strategy. Only risk capital should be used and the rigid observation of a system for loss control is strongly recommended. Additionally, the use of margin may dramatically increase the risks associated with trading. Hawkeye Traders make no claims whatsoever regarding past or future performance. Past results are no indication of future performance.

Any trade alert is for educational purposes only. Hypothetical or simulated performance results have certain inherent limitations. Unlike an actual performance record, simulated results do not represent actual trading. Also, since the trades have not actually been executed, the results may have under – or overcompensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated trading programs in general are also subject to the fact that they are designed with the benefit of hindsight.

No representation is being made that any account will, or is likely to, achieve profits or losses similar to those shown.

## **Software User Agreement**

IMPORTANT: PLEASE READ THIS AGREEMENT CAREFULLY BEFORE CONTINUING WITH THE INSTALLATION PROCESS OF THE SOFTWARE ("THE SOFTWARE"). BY INSTALLING THE SOFTWARE, YOU AGREE TO BE BOUND BY THE TERMS OF THIS AGREEMENT. IF YOU DO NOT AGREE TO THE TERMS OF THIS AGREEMENT, DO NOT INSTALL THE SOFTWARE.

### ***License***

If you have purchased a license to the Software, Hawkeye Traders grants you a nonexclusive right and license to use the Software and the related documentation (the "Documentation") as set forth in this Agreement. You may use the Software on a single computer. You may also use the Software on a second (portable or home) computer, provided this uses the same account number, or customer number only. Additional and subsequent licenses for other platforms can be purchased at a 50% discount from the original retail price. You may make a single copy of the Software for backup and archival purposes only provided that any copy must contain all proprietary notices included in the original. You may use the Documentation to assist in your use of the Software. If you download the Software without physical delivery of Documentation, you may review the Documentation online, but you may not make further copies of the Documentation. You own the media on which the Software is recorded, but not the Software itself or any copy of it. This license is not a sale of the original or any copy of the Software.

## ***Copying, Transferring or Modifying Software***

The Software contains copyrighted material, trade secrets and other proprietary intellectual property. You may not permit concurrent use of the Software unless each user has an applicable license. You may not permit other individuals to use the Software except under the terms listed above. For the purposes of protecting Hawkeye Traders trade secrets, you may not decompile, disassemble, reverse engineer or otherwise display the Software in human readable form. You may not modify, translate, rent, lease, distribute or lend the Software, and you may not sell to others the right to use the Software on your computer. You may not remove any proprietary notices or labels on the Software. You may not copy, transfer, transmit, sublicense or assign this license or the Software except as expressly permitted in this Agreement.

## ***Term***

If you have purchased a license to the Software, this Agreement and license are effective from the time you accept the terms of this Agreement until this Agreement is terminated. You may terminate this Agreement at any time by destroying all copies of the Software. This Agreement will terminate immediately and without further notice if you fail to comply with any provision of this Agreement. All obligations of confidentiality and restrictions on use, and all other provisions that may reasonably be interpreted to survive termination of this Agreement, will survive termination of this Agreement for any reason. Upon termination, you agree to destroy all copies of the Software. If you have obtained an evaluation copy of the Software, and have not purchased a license to the Software, this Agreement and license are effective for a period of thirty (30) days from the date of installation of the Software.

## ***Warranty Disclaimers***

THE SOFTWARE AND THE DOCUMENTATION ARE PROVIDED "AS IS" AND WITHOUT WARRANTIES OF ANY KIND, EXPRESS, STATUTORY OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON INFRINGEMENT. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE SOFTWARE AND THE DOCUMENTATION IS WITH YOU. SHOULD THE SOFTWARE OR THE DOCUMENTATION PROVE DEFECTIVE, YOU (AND NOT HAWKEYE TRADERS) ASSUME THE ENTIRE COST OF ALL NECESSARY SERVICING OR REPAIR.

HAWKEYE TRADERS DOES NOT WARRANT THAT THE FUNCTIONS CONTAINED IN THE SOFTWARE WILL MEET YOUR REQUIREMENTS OR OPERATE IN THE COMBINATION THAT YOU MAY SELECT FOR USE, THAT THE OPERATION OF THE SOFTWARE WILL BE UNINTERRUPTED OR ERROR FREE, OR THAT DEFECTS IN THE SOFTWARE WILL BE CORRECTED. NO ORAL OR WRITTEN STATEMENT BY HAWKEYE TRADERS OR BY A REPRESENTATIVE OF HAWKEYE TRADERS SHALL CREATE A WARRANTY OR INCREASE THE SCOPE OF THIS WARRANTY.

Notwithstanding the above, you may have certain warranty rights which vary from state to state and which cannot be disclaimed by contract. Any warranties that by law survive the foregoing disclaimers shall terminate ninety (90) days from the date you received the Software as shown by your receipt. Some states do not allow limitations on how long an implied warranty lasts, so the foregoing limitation may not apply to you if prohibited by law.

### ***Limitation of Liability***

YOUR SOLE REMEDIES AND HAWKEYE TRADERS' ENTIRE LIABILITY ARE SET FORTH ABOVE. IN NO EVENT WILL HAWKEYE TRADERS BE LIABLE FOR DIRECT, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM THE USE OF THE SOFTWARE, THE INABILITY TO USE THE SOFTWARE, OR ANY DEFECT IN THE SOFTWARE, INCLUDING ANY LOST PROFITS, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGE. IN NO EVENT WILL HAWKEYE TRADERS' TOTAL LIABILITY TO YOU FOR ALL DAMAGES, LOSSES, AND CAUSES OF ACTION (WHETHER IN CONTRACT, TORT, INCLUDING NEGLIGENCE, OR OTHERWISE) EXCEED THE AMOUNT YOU PAID FOR THIS PRODUCT. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF RELIEF, INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU.

You agree that Hawkeye Traders will not be liable for defense or indemnity with respect to any claim against you by any third party arising from your possession or use of the Software or the Documentation.

## ***Export Control Laws***

You agree to comply with all laws, rules and regulations applicable to the export of the Software or the Documentation. Specifically, you shall not export, re-export or transship the Software or the Documentation, or the direct product thereof, in violation of any United States laws and regulations which may from time to time be applicable.

None of the Software or underlying information or technology may be downloaded or otherwise exported or re-exported (i) into any country to which the U.S. has embargoed goods; or (ii) to anyone on the U.S. Treasury Department's list of Specially Designated Nationals or the U.S. Commerce Department's Table of Denial Order. By downloading or using the Software, you are agreeing to the foregoing and you are representing and warranting that you are not located in, under the control of, or a national or resident of any such country or on any such list.

## ***Government Restricted Rights***

The Software has been developed at private expense and is "commercial computer software" or "restricted computer software" within the meaning of the FARs, the DFARs, and any other similar regulations relating to government acquisition of computer software. Nothing contained herein will be deemed to grant any government agency any license or other rights greater than are mandated by statute or regulation for commercial computer software developed entirely at private expense.

***Entire Agreement***

This Agreement is the complete agreement between Hawkeye Traders and you, and supersedes all prior agreements, oral or written, with respect to the subject matter hereof. If you have any questions concerning this Agreement, you may write to Hawkeye Traders, Customer Service, at [team1@hawkeyetraders.com](mailto:team1@hawkeyetraders.com).

***Your Agreement***

By continuing to read the this user manual, along with the trading rules and guidelines contained in this document, you hereby agree to be bound by the terms of this agreement, and all the conditions and indemnities contained within it.

## Welcome To The Hawkeye Family

Welcome once again to the Hawkeye family, and thank you for investing in Hawkeye, the world's only trading software based on Volume Price Analysis.

The Hawkeye software works in all markets, and in all timeframes allowing you to trade in commodities, indices, stocks, bonds and currencies with equal ease. In addition, Hawkeye provides you with two unique indicators, the Gearbox and the Gearchanger, which reveal each day the

optimal tick charts to trade, giving you the edge you need to trade in harmony with market momentum. So whether you are an intra day trader, or a longer term swing or trend trader, the Hawkeye software has it all.

Trading success of course is based on many things, but one of the guiding principles I believe, is to keep things simple, and this applies both to your trading strategies, and also to your all important trading plan.

Having a simple trading plan, which you follow in each and every trade, is one of the cornerstones of success, and in Hawkeye we are fortunate in having a suite of indicators which tell us when to get in, help us to stay in, and then get out, with a profit ( or a small loss ). We have all come across the phrase, 'the trend is your friend' but this is indeed one of the truisms of trading success. Most traders struggle to master this difficult skill, since our emotions are telling us to exit as soon as we have a small profit in any position. With Hawkeye however, this skill is mastered easily, as we simply follow our simple exit rules, guided by the most powerful indicators available, such as Trend and Stops, which paints our trend for us, and all of course underpinned by the unique Hawkeye algorithms which forecast the market's intent based on Volume Price Analysis.

If the first golden rule of trading success, is to keep things simple, then the second golden rule is to trade without an opinion, and to simply trade what we see on our charts.

As traders, we are bombarded from all sides with news, analysis and comment from all sides and from an increasingly diverse number of channels. So at times this can be hard to achieve, but achieve it we must. Trade only what we see on our chart, and not what the weight of market opinion or the latest expert analysis is advising. They are generally wrong, and have no value, other than to feed the voracious appetite that is the media, in all its forms.

With Hawkeye, you have a unique and powerful suite of tools, which undertake 300 calculations on each and every price bar. These calculations are not influenced by human opinion, political ambition, or natural disaster. Hawkeye simply analyzes the price and volume relationship using a combination of standard deviation and price pattern recognition, which is then coupled with the volume price algorithms to deliver the most powerful trading software in the world.

My own trading journey started with Hawkeye and after spending 20 years learning how to trade and building my personal success on Hawkeye, I would like to give something back.

This is the start of your own trading journey, and I would like to welcome you once again to the Hawkeye family.

It may be a cliched saying, but our success is your success, something I truly believe, and if I can help in any way whatsoever, you only have to ask. Over the years I have built many friendships with traders from around the world, something I would like to continue as Hawkeye reaches an ever larger audience.

So please do keep in touch - I love to hear from customers around the world, and I or a member of the Hawkeye team will always get back to you.

**Kind regards - Nigel Hawkes    Founder, Hawkeye Traders**

## Getting Started

### Download and Installation

The Hawkeye tools and indicators for your MT4 platform will be delivered to you by email, with a download link and installation instructions, once your purchase has been confirmed.

**This email should be kept in a safe place**, as the download link can be used to reinstall the indicators on your system, should you upgrade your hardware in the future. If you are subscribed to one of our complete packages, then you will automatically receive any upgrades free of charge with a new download link, and once again **this should be saved for future use**. The previous download can then be deleted.

These are the installation steps to follow, once you have received your email from us.

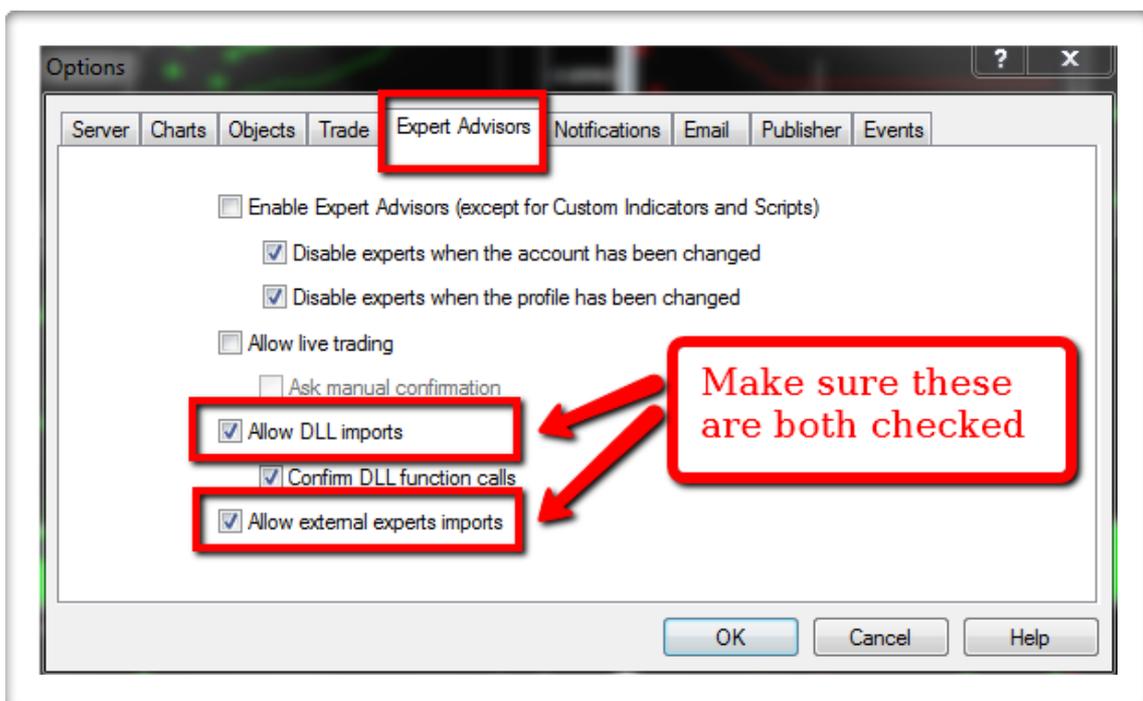

-  Exit your MetaTrader 4 platform
-  Double click the download link in the email
-  Left click on **run**
-  **You may be asked to verify the program publisher by your browser security - if so..**
-  **Left click** on **run** again

- 📌 When the **blue pop up wizard** appears
- 📌 **Left click** on the **Next** button
- 📌 This will start the installation process
- 📌 Follow the prompts in the **wizard** to complete the download and installation

Once you have completed the above steps - restart your MetaTrader4 platform and log in to your account. From the home page navigation bar complete the following steps:

- 📌 **Left click** on **Tools**
- 📌 From the drop down menu **left click** on **Options**

The following window will then appear:

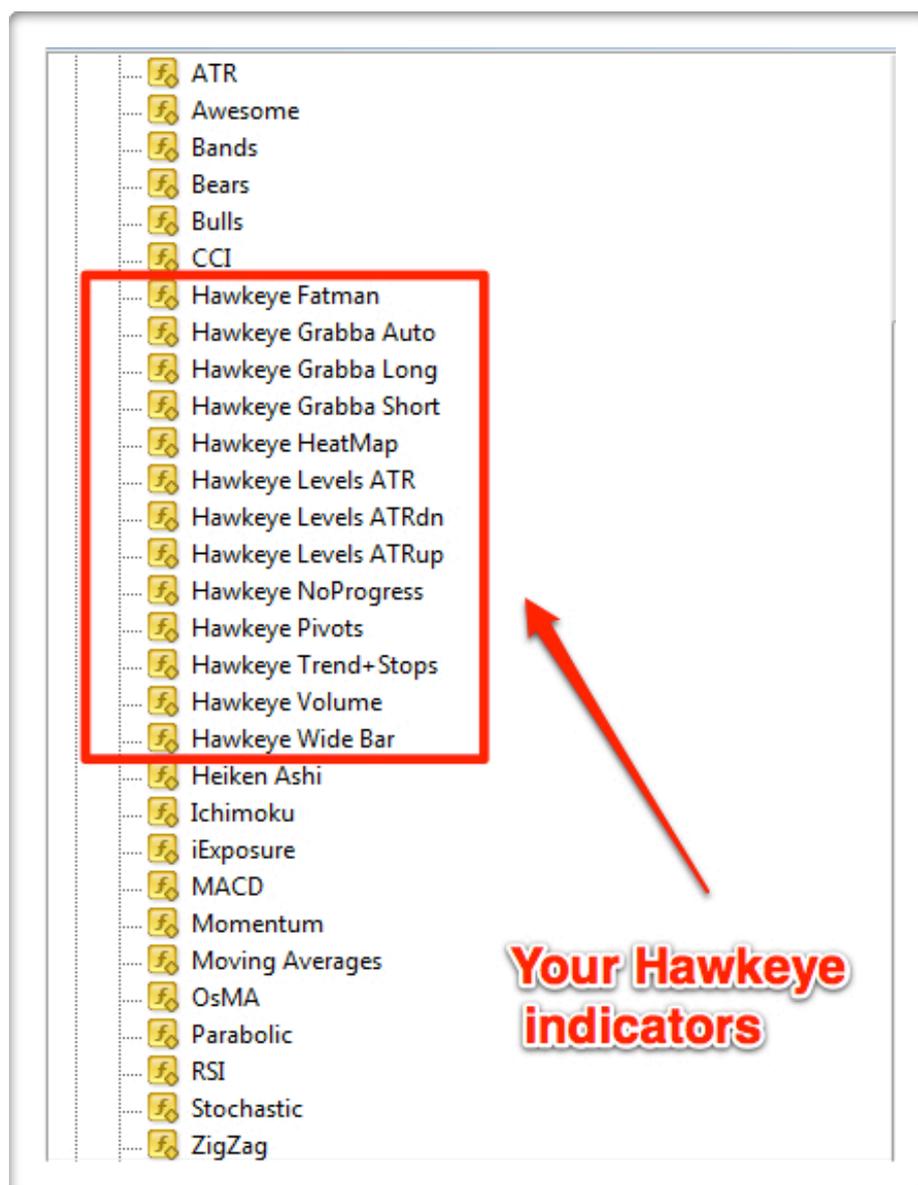

-  **Left click** on the Expert Advisors tab
-  You need to make sure that the following two boxes are checked with a tick
-  **Allow DLL imports**
-  **Allow external experts imports**
  
-  If these boxes do not have a tick, simply **left click** in the box and the tick will then appear
-  **Left click** on the **OK** button to save any changes
-  **Exit** your MetaTrader4 platform again and then restart
-  Your Hawkeye MT4 package of indicators should now be installed on your computer

In order to check that all your Hawkeye tools and indicators have installed correctly :

-  **Left click** on **View** in the top level navigation
-  **Left click** on **Navigator**

The following window will then appear which will list all the Hawkeye indicators contained in your Hawkeye MT4 package.

## Browsers and security

Many popular browsers are increasingly provided with in built security features, which are designed to keep your system secure, and to alert you to potential issues when downloading files and software. As a result your browser may prevent your software package from downloading.

There are several steps you can take to resolve this problem as follows :

-  Go to the Tools section in your browser and disable the 'Pop Up Blocker' which should then allow you to continue with the download and installation
-  If you are using Internet Explorer, our suggestion is to download and install an alternative browser, such as Google Chrome or Firefox. Internet Explorer will continue to block the download even when the Pop Up Blocker has been disabled. This is very common issue with IE7 and above.
-  As part of the download and installation process, our software delivery system automatically places security files in the Systems directory under Windows. This is often a target for virus software, and therefore your security software **may raise a warning**, to alert you to this fact.

This message will normally ask you to confirm that the installation is from a safe source. **THIS IS PERFECTLY NORMAL**, and to continue simply confirm that you are happy to proceed, and the installation should then continue as normal.

## Fast Start With Hawkeye

Can't wait to get started with your Hawkeye indicators, but simply don't have time to read the user manual ? Perhaps you're a little nervous when it comes to computers?

***Don't worry. Help is at hand.***

Sit back and relax while a Hawkeye technical consultant sets up your trading platform with the Hawkeye tools and indicators, all in the comfort of your own home or office, so you'll be up and trading with the minimum of fuss. And it's all done remotely by our own in house experts. SO here's what we offer

-  Direct connect to your computer and do the set up for you
-  Prepare or upgrade your platform for you
-  Set up your data feed if required
-  Install your new Hawkeye indicators and tools
-  Configure your indicators
-  Set up the workspaces and charts for the markets you trade

## Getting To Grips With MetaTrader 4

- ▶ **Getting Started: open Free Demo Account**
- ▶ **Real-time quotes in the "Market Watch" window**
- ▶ **Charts**
- ▶ **Open/close a position**
- ▶ **Stop Loss and Take Profit orders**
- ▶ **Trailing Stop**
- ▶ **Pending Orders**

The following link provides an excellent introduction to the MT4 platform, and will help you to get started quickly and easily with this popular trading platform.

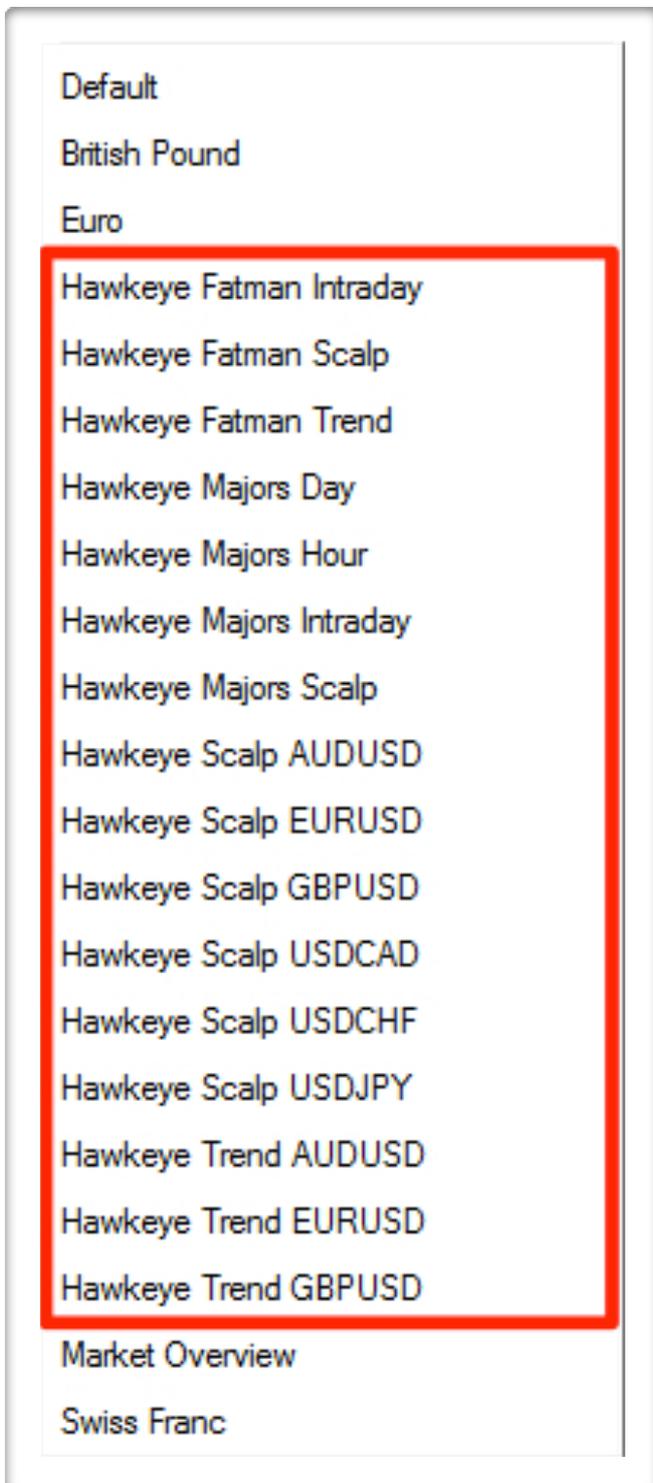

Here you will find all the basic features of the platform explained including real time quotes, setting up and configuring your charts, how to place trades and attach various order types to each position.

**MetaTrader 4**

**[Getting started with MT4](#)**

## Getting Started With Your Hawkeye Indicators

There are several ways to add the Hawkeye indicators to your charts, and in addition we have also supplied your MT4 package with several pre-configured profiles and templates which will help you to get started, quickly and easily.

You can find these in several different ways as follows :

 **Left click on File**

 **Left click on Profiles** from the drop down menu

 The pop up menu shown here will then appear with a choice of pre-configured profiles available to help you get started quickly.

Here you will find a selection of profiles which contain pre-configured charts, based on different trading styles and strategies, and with the following Hawkeye indicators already installed for you. These are detailed below:

-  *Hawkeye Heatmap*
-  *Hawkeye NoProgress*
-  *Hawkeye Pivots*
-  *Hawkeye Trend and Stops*
-  *Hawkeye Volume*
-  *Hawkeye Widebar*

In addition you will also find several profiles where we have installed the Hawkeye Fatman indicator, either separately or with other charts, based on various timeframes for different trading strategies. This should help you get started quickly and easily.

The two remaining indicators included with your package are the Hawkeye Levels ATR and the Hawkeye Grabba. Both of these indicators are installed from the Navigator function and this is described later in the user manual.

Alternatively, your Hawkeye indicators can be accessed in a different way, using the **Templates** feature as follows:

-  **Left click** on **File**
-  **Left click** on **New Chart** from the drop down menu
-  **Left click** on a currency pair from the drop down window
-  **Right click** anywhere on the chart
-  **Scroll down** to **Template** and hover
-  **Scroll down** to **Hawkeye Full** from the drop down menu
-  **Left click** on **Hawkeye Full**

This will automatically add the following Hawkeye indicators to your chart :

-  *Hawkeye Heatmap*
-  *Hawkeye NoProgress*
-  *Hawkeye Pivots*
-  *Hawkeye Trend and Stops*
-  *Hawkeye Volume*
-  *Hawkeye Widebar*

If you would like to create a chart with the Hawkeye Fatman indicator, simply follow these steps :

-  **Left click** on **File**
-  **Left click** on **New Chart** from the drop down menu
-  **Left click** on a currency pair from the drop down window
-  **Right click** anywhere on the chart
-  **Scroll down** to **Template** and hover
-  **Scroll down** to **Hawkeye Fatman** from the drop down menu
-  **Left click** on **Hawkeye Fatman**

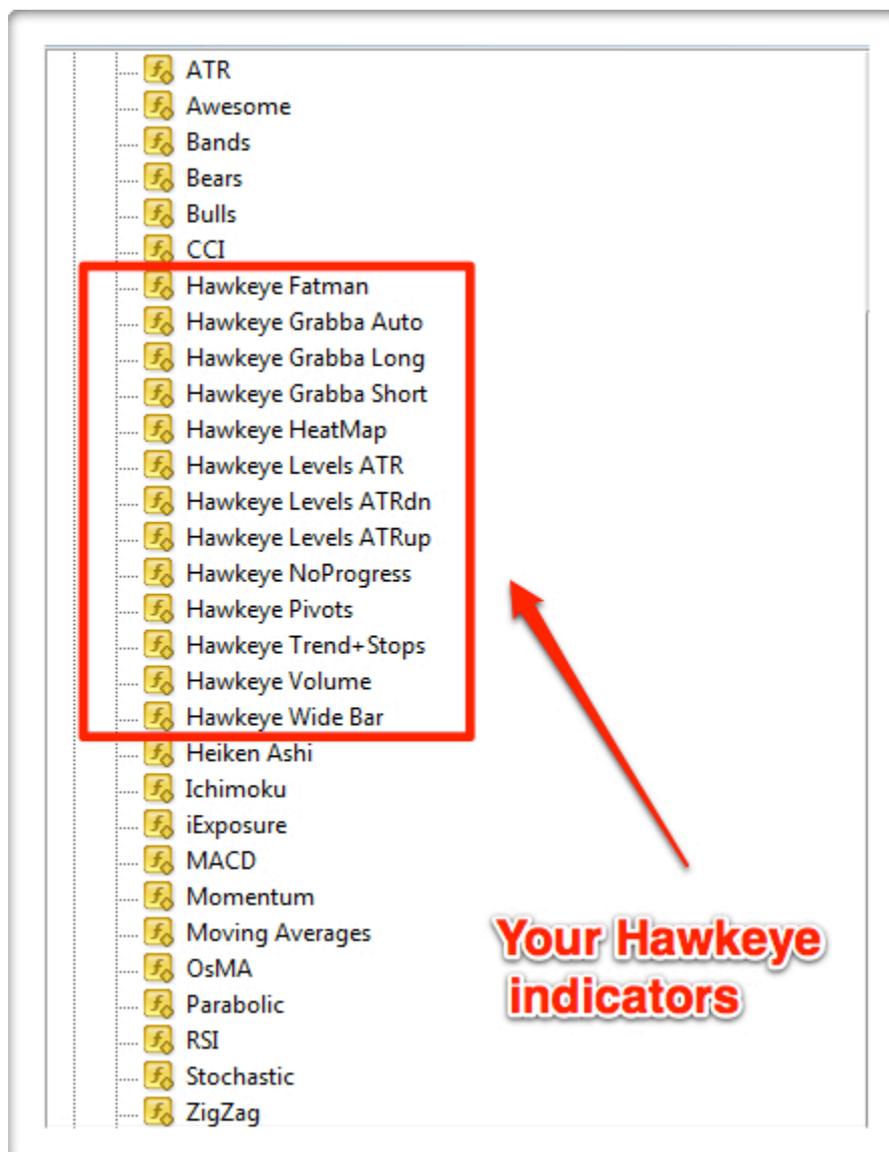

This will then display the Hawkeye Fatman indicator on your chosen timeframe.

Finally there is another way to add your Hawkeye indicators to your charts, using the Navigator function.

The Navigator window will appear in the left hand pane of your workspace and to remove it from view, simply **left click** on **View** in the top level navigation again, and **left click** on **Navigator**, and the Navigator pane will then simply disappear.

- 📌 Left click on **View** in the top level navigation
- 📌 Scroll down to **Navigator** from the drop down menu
- 📌 Left click on **Navigator**
- 📌 Left click on the small **+** alongside Custom Indicators

This will display the following window with all your Hawkeye indicators listed in alphabetic order.

To insert one of the Hawkeye indicators into an existing chart, simply follow these steps :

- 🖱️ **Left click** on the Hawkeye indicator you wish to add to your chart
- 🖱️ This will highlight the indicator in **blue**
- 🖱️ **Left click** and **HOLD** then drag the indicator across to the chart
- 🖱️ Your pointer will display a small box
- 🖱️ Once you are hovering over the chart then **RELEASE**

The following pop up window will then appear:

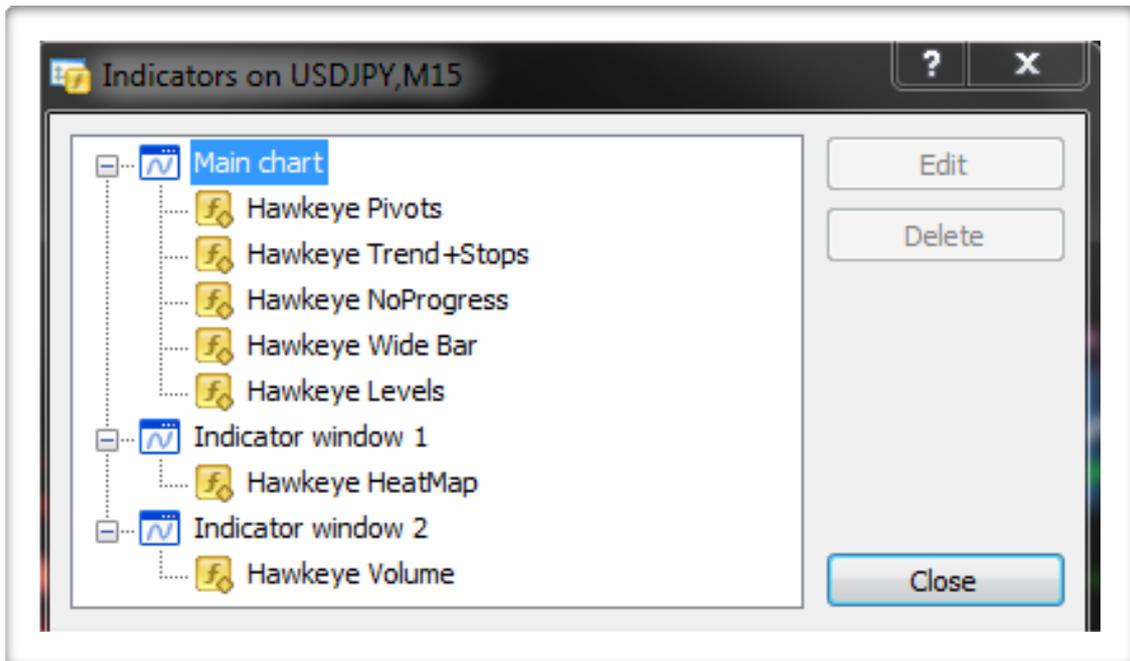

**Left click** on the **OK** button and the indicator will be added to your chart.

To see which indicators are currently active on any chart simply follow the steps below :

-  **Right click** anywhere in the chart window and the following window will then pop open
-  Scroll down to **Indicators List**

- 📌 **Left click** on **Indicators List** and the following window will then open, and here you will find all the active indicators for this chart.

If you would like to remove an indicator from those listed on the chart, simply follow these steps :

- 📌 **Left click** on the indicator you wish to remove
- 📌 This will then highlight in **blue**
- 📌 **Left click** on the **Delete** button on the right of the window
- 📌 **Left click** on **Close** to complete

Alternatively, if you simply want to edit an indicator's setting, **left click** on the **Edit** button to access all the configuration settings such as **Input** values and **Colors**. This is described in more detail for each individual indicator later in the user manual.

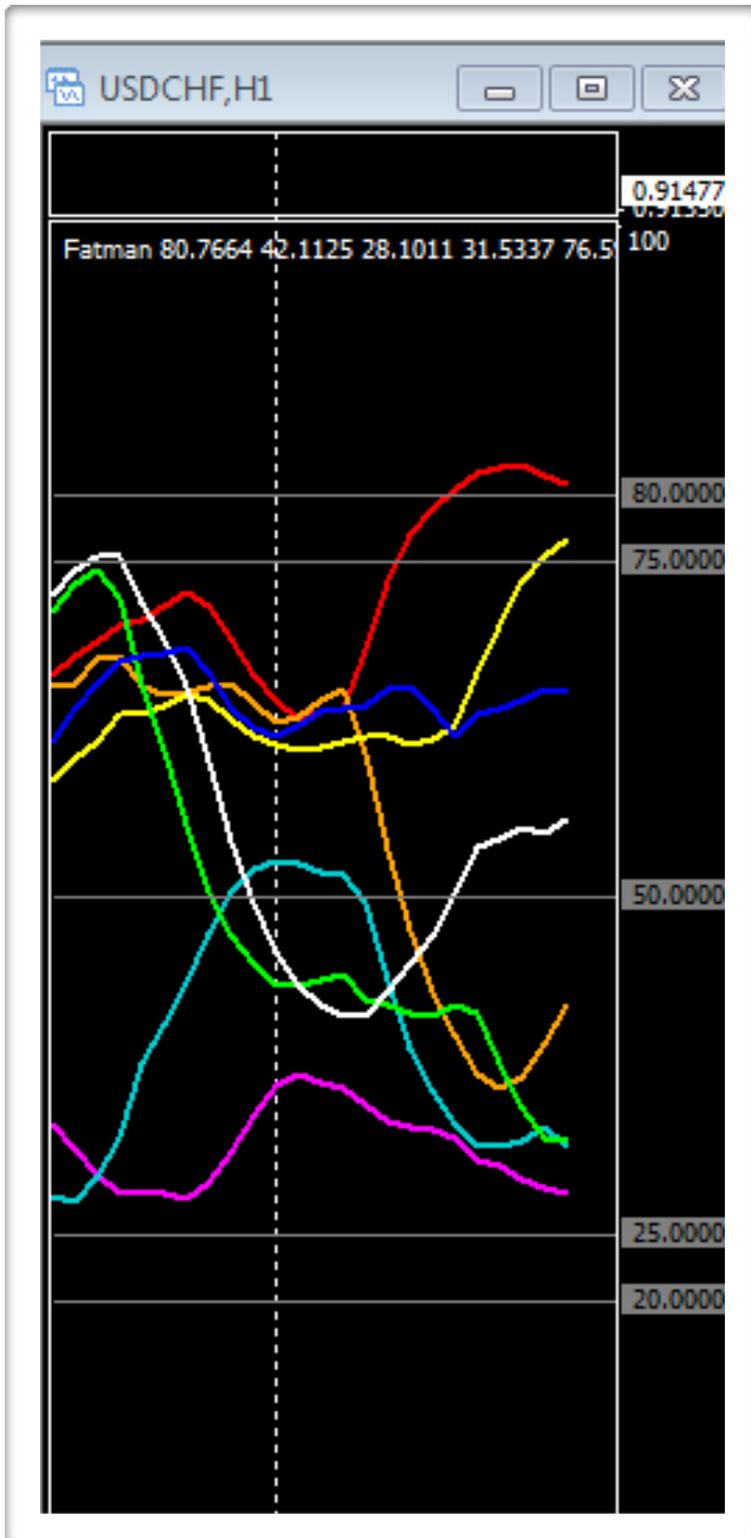

## The Hawkeye Tools & Indicators

-  The Fatman indicator
-  The Grabba indicator
-  The Heatmap indicator
-  The Levels ATR indicator
-  The No Progress indicator
-  The Pivots indicator
-  The Trend and Stops indicator
-  The Volume indicator
-  The Widebar indicator

## Hawkeye Fatman Indicator

The Fatman indicator is only used when trading forex. It looks at 13

currencies which are divided into each and which are then weighted according to the Hawkeye algorithm. Only the following currencies are displayed on the indicator :

📍 EURO : green

📍 AUD : red

📍 GBP : orange

📍 CAD : yellow

📍 USD : cyan

📍 NZD : blue

📍 JPY : magenta

📍 CHF : white

The indicator looks at strength and weakness in each currency and what you are looking for with the Fatman is when a currency is overbought or oversold. In other words, the extremes on the indicator, therefore giving you advance warning of an imminent change in trend.

A currency is **OVERBOUGHT** when it is at the top of the indicator, and **OVERSOLD** when it is at the bottom of the indicator. Success in trading currencies is all about understanding which currencies are strong and which are weak. This is the power of the Fatman indicator.

The steepness or angle of incline or decline of each of the currencies is telling you several things as follows :

-  That currency's strength or weakness. The instantaneous strength can be seen at the far right edge of the indicator
-  The currency's strength history. What it's been doing in the most recent past
-  The steeper the angle, then the stronger the change over time. In other words the steepness of the line signals the momentum in the currency

## Inserting and configuring

There are three simple ways to insert the Fatman indicator into your MT4 workspaces. These are as follows:

### 1. *Use the MT4 Template Feature*

**Left click** on **File**

**Left click** on **New Chart** from the drop down menu

**Left click** on a currency pair from the drop down window

**Right click** anywhere on the chart

**Scroll down** to **Template** and hover

From the drop down menu **scroll down** to **Hawkeye Fatman**

**Left click** on **Hawkeye Fatman**

This will then load the Hawkeye Fatman indicator into the existing chart.

**The Fatman can be loaded into ANY CURRENCY PAIR - this has NO EFFECT on the display of the indicator.**

## 2. Use the MT4 Profiles Feature

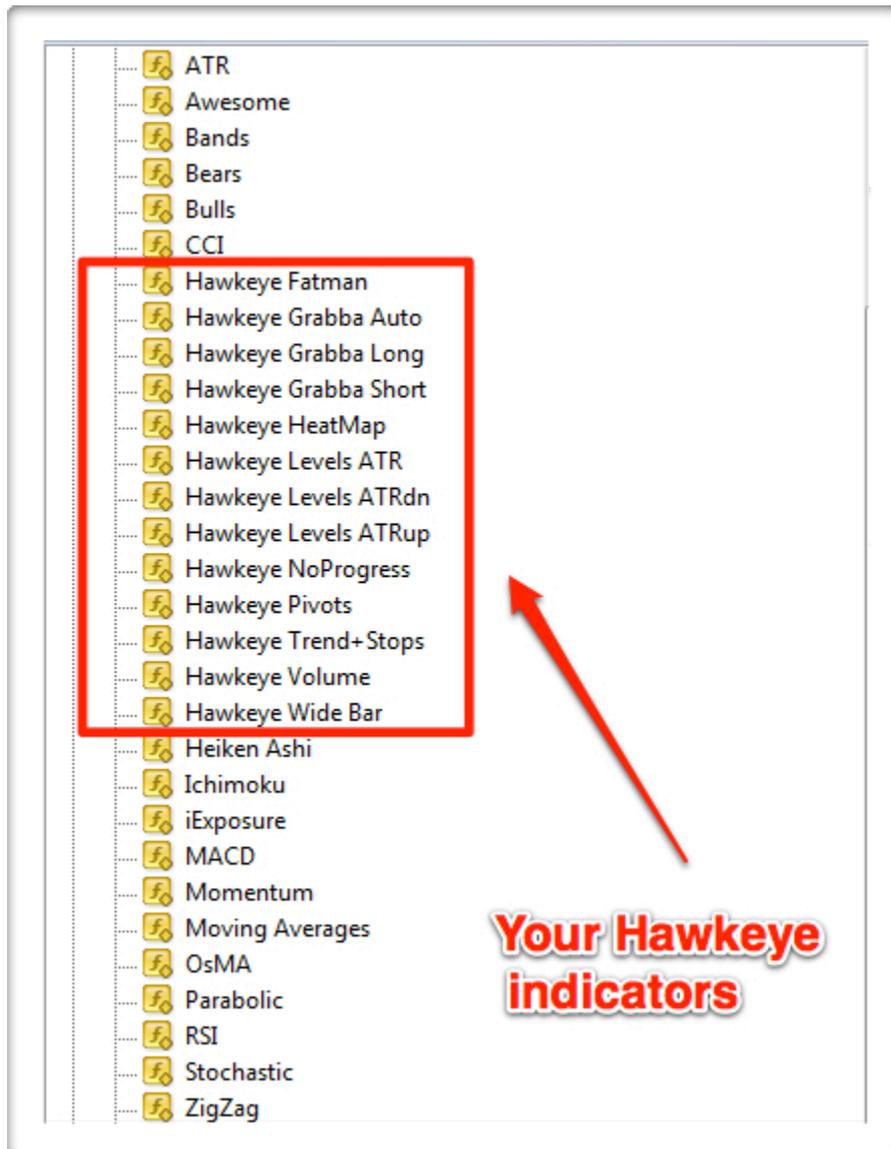

-  Left click on **File**
-  Left click on **Profiles** from the drop down menu
-  Left click on **one of the Hawkeye Profiles** from the drop down menu of pre-configured profiles

This will load a chart with the Fatman indicator already installed along with several charts with the remaining Hawkeye indicators.

## 3. Use the MT4 Navigator Feature

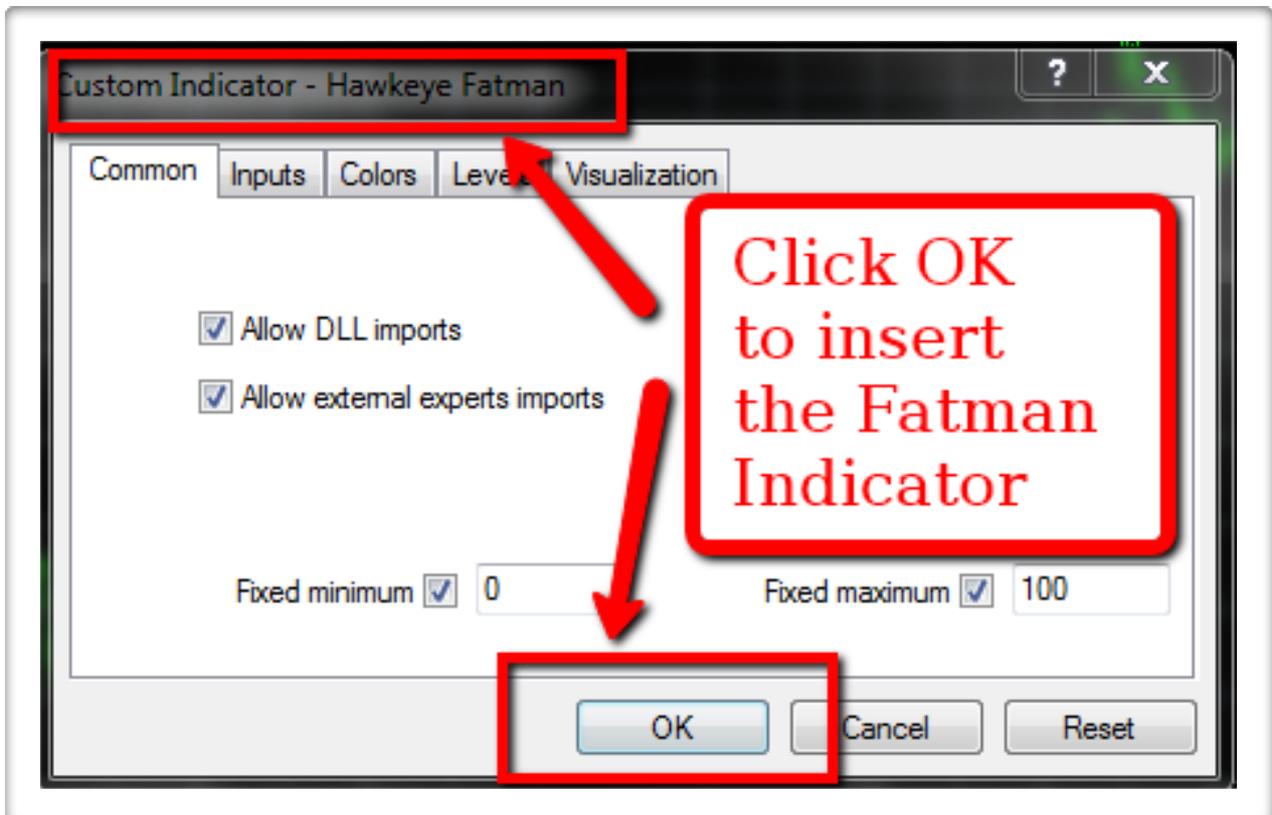

-  Left click on **View** in the top level navigation
-  Scroll down to **Navigator** from the drop down menu
-  Left click on **Navigator**
-  Left click on the small **+** alongside **Custom Indicators**

This will display the following window with all your Hawkeye indicators listed in alphabetic order.

- 🖱️ **Left click** on the Hawkeye Fatman indicator
- 🖱️ This will highlight the indicator in **blue**
- 🖱️ **Left click** and **HOLD** then drag the indicator across to the chart
- 🖱️ Your pointer will display a small box
- 🖱️ Once you are hovering over the chart then **RELEASE**

The following pop up window will then appear:

**Left click** on the OK button to install the Fatman indicator on your chart.

You may need to move the chart to the top of the window in order to expand the view to full size within the chart. To do this, simply hover over the border of the window between the chart and the Fatman indicator:

-  **Hover** over the border
-  When the icon with two small parallel lines appears

- 📌 Left click and HOLD, then DRAG AND DROP to the top of the window

Your Fatman indicator should now be at full size in the chart window. To change the timeframe on the Fatman indicator

- 📌 **Left click** on the chart to make this the active window
- 📌 **Left click** in the MT4 toolbar on one of the pre-configured timeframes such as M15, M30, H1 etc

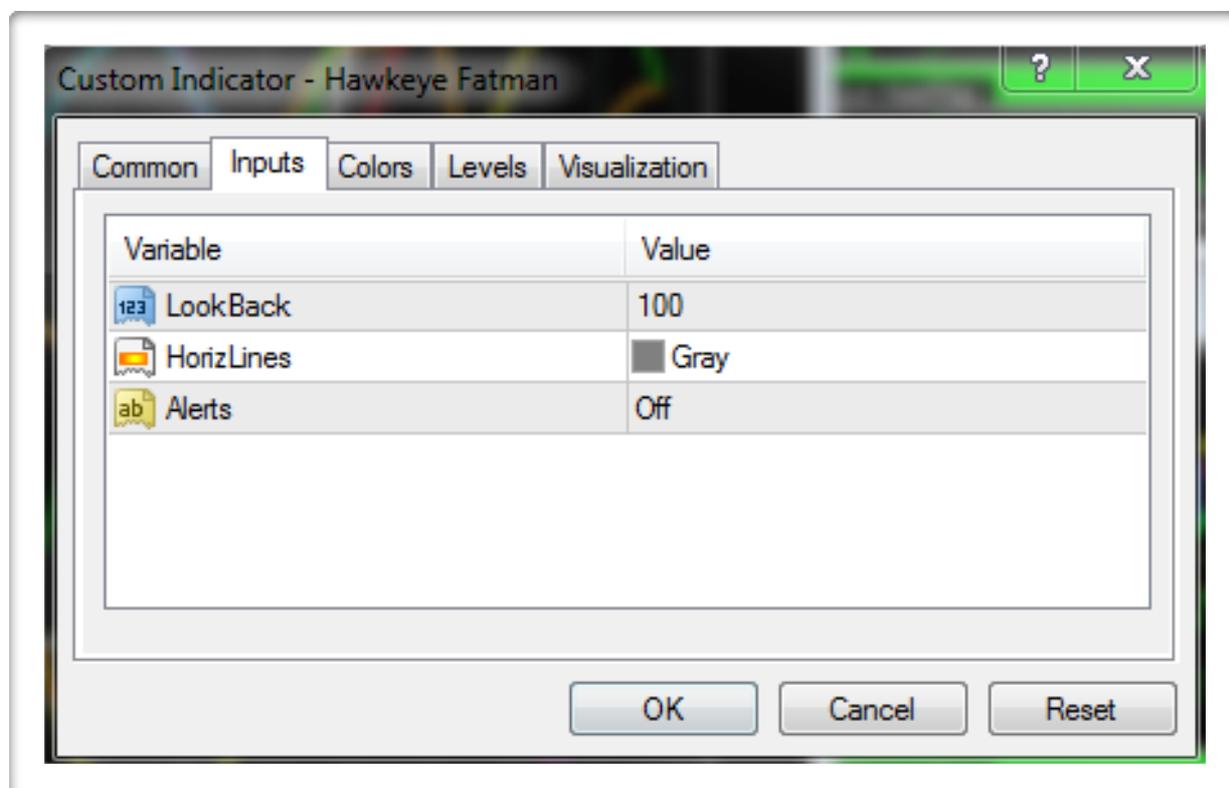

This will then change the Fatman to the timeframe of your choice.

There are various inputs that you can change within the Fatman indicator, and these are accessed as follows:

- 📌 **Hover your cursor** on **ONE** of the currencies on the Fatman indicator until you see a small window appear
- 📌 This will display as Hawkeye Fatman, the time and the currency ( USD, CAD etc)
- 📌 **Right click**, and the following window will then appear as shown below

- 📌 **Left click** on Fatman properties and the following window will appear

- 📌 **Left click** on the **Inputs** tab in the navigation to access the settings for the indicator
- 📌 **Lookback** = n - this is the number of bars that the Fatman indicator looks back over in order for the calculations within the algorithm. The default is 100, but please remember that the greater this number, then the more bars of history, but also the longer it will take to perform the calculations when you switch timeframes. Once the calculations are complete, the time to calculate updates is negligible. To change this setting simply **double left click** on the **Value** and enter a new value.

-  **HorizLines** - these are the lines at the top and bottom of the Fatman indicator. You can change these to the color of your choice. Simply **double left click on the Value**, and a drop down arrow will appear alongside the default color Gray. **Left click** on the drop down, **select** a new color from the color palette, and this will then appear in the color icon as selected.
-  **Alerts** - **left click** on the Alerts selection which will highlight in blue. **Double left click** on the **Value** and change from **Off** to **On**. This will then enable the alerts function for the indicator.

To change the colors of the Fatman indicator simply **left click** on the **Colors tab** in the above window. Here you can change both the color and style of all the individual currencies.

You can set any currency to the same color as your background, effectively turning off the display of that currency. You may want to do this if you're trading only the Asian session, for example, to see only those pairs that are active during that session.

Or, if you don't trade a certain currency, set the color to your background color and you won't see it.

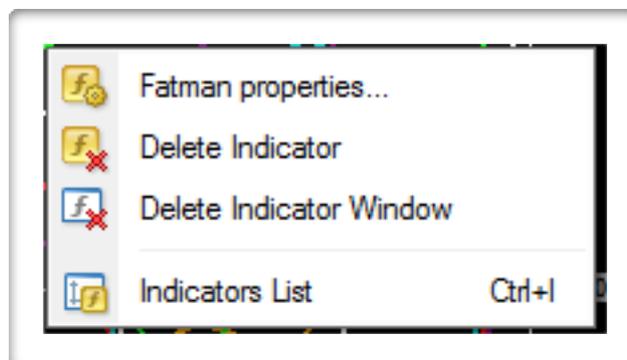

The default settings for **Visualization** are for All timeframes. You may change this if you wish by simply selecting an alternative setting using the tick box feature.

When you have finished **left click** on the **OK** button and your Hawkeye Fatman will display with the amended settings.

**Please note - the Hawkeye Fatman should ONLY be displayed in a window on it's own.**

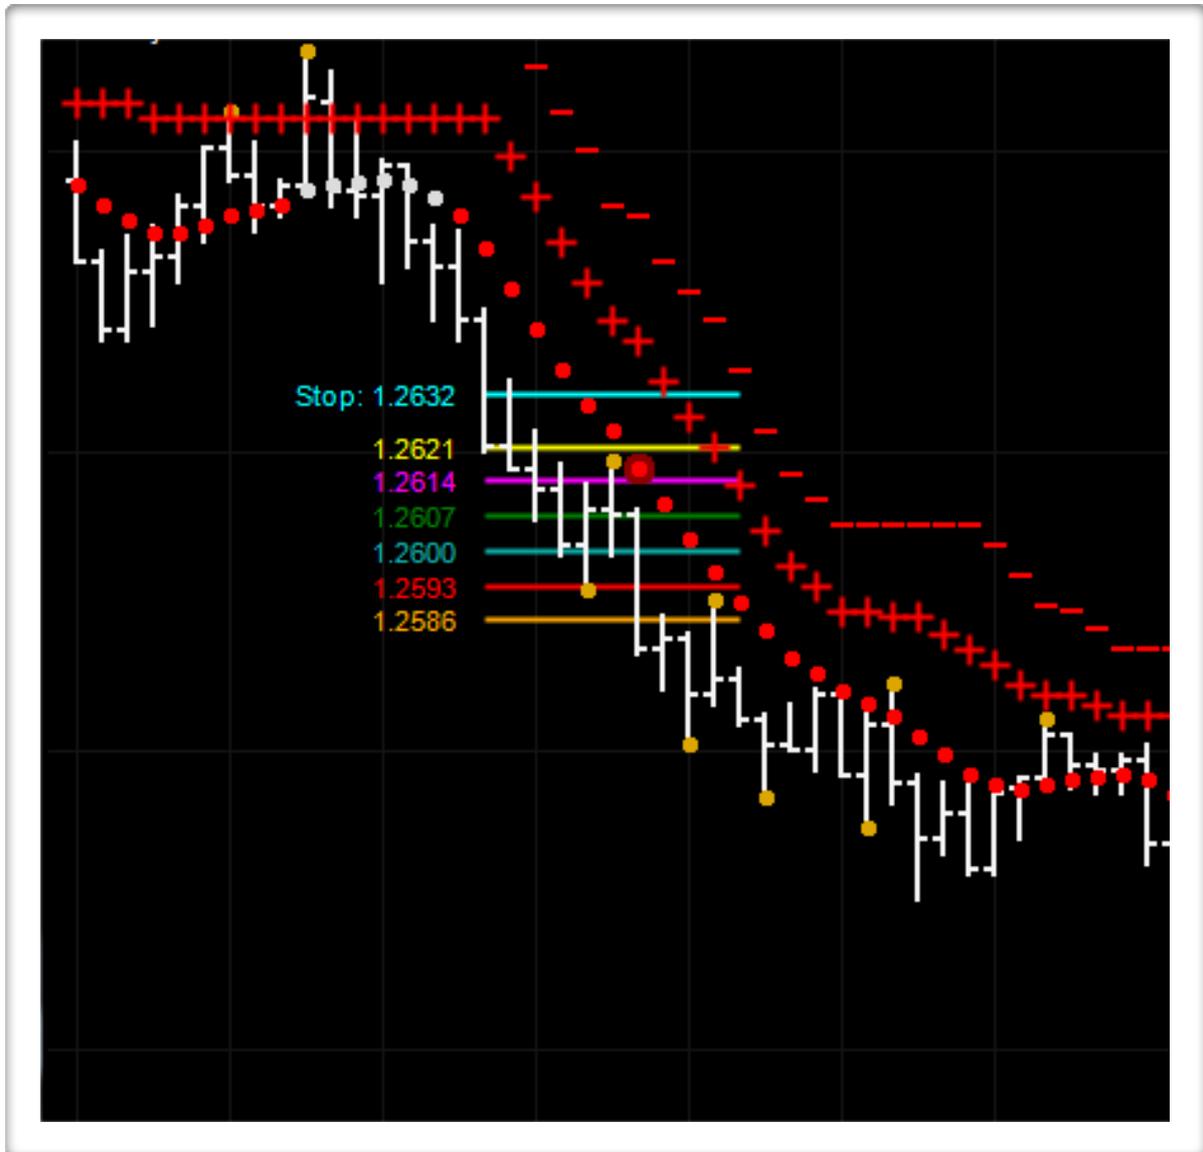

To remove the indicator from the chart completely:

- 📍 **Hover your cursor** on **ONE** of the currencies on the Fatman indicator until you see a small window appear
- 📍 This will display as Hawkeye Fatman, the time and the currency as shown below
- 📍 **Right click**, and the following window will then appear as shown below

- 📍 **Left click** on Delete indicator and the Fatman will be removed from your chart.

## Hawkeye Grabba Indicator

This is a very simple tool which you can use to define how many pips or points that you want to take in each scalping position. The indicator is entirely manual, and gives you a simple and quick way to see your profit targets on the chart.

The levels of the profit targets are user defined along with a user defined stop loss, giving a flexible risk reward ratio to suit your level

of risk. So for example, if you enter 10 in the user set up, then this will define your levels in 10 pip or point increments on the chart. You can exit wherever you like and is a totally user defined profit target indicator.

So you define the settings, both for your profit targets as well as the level of risk you are prepared to take on each trade. This helps establish a strong risk reward ratio that is an extremely important aspect to successful trading.

In the above example the levels have been set in 7 tick increments with a stop loss multiplier of 1.5 and the levels are then displayed visually on your chart.

The Hawkeye Grabba is supplied in three versions as follows :

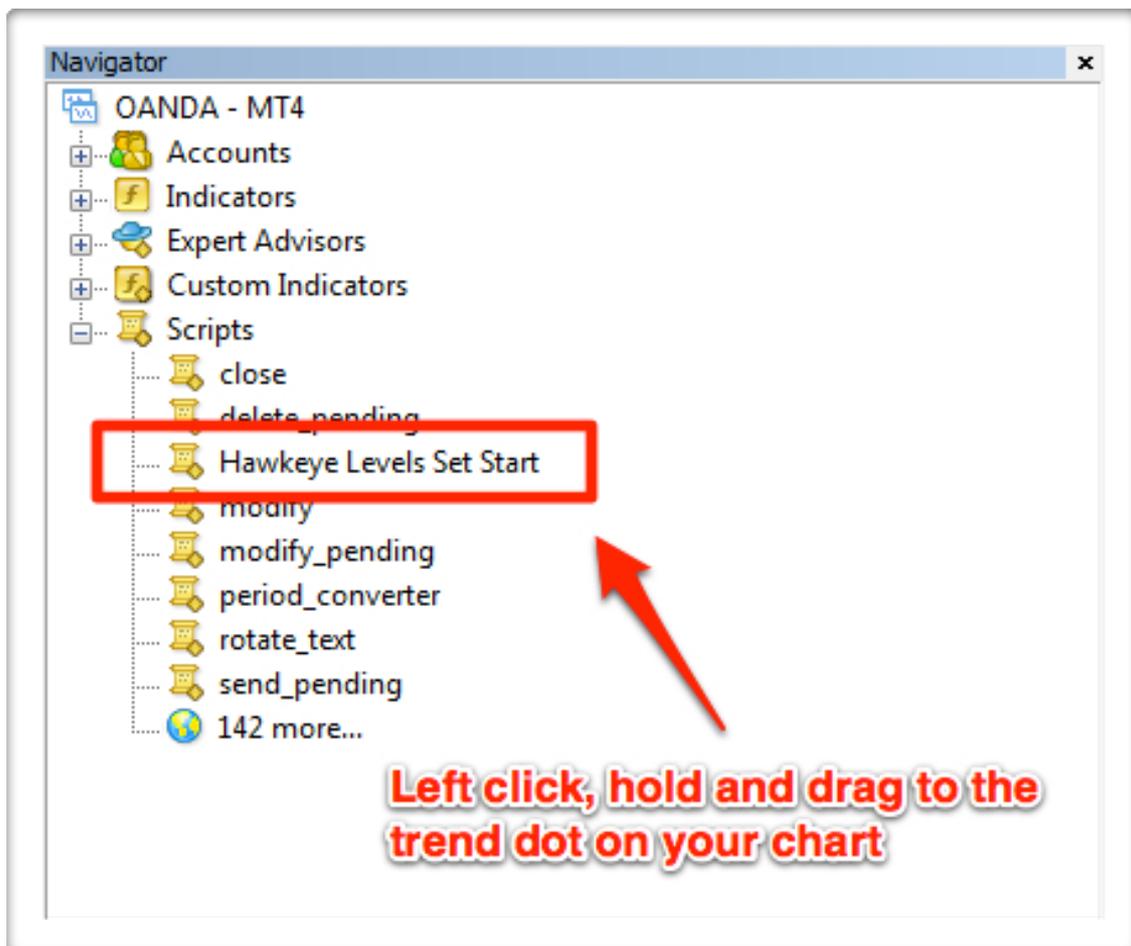

-  The Grabba Auto
-  The Grabba Long
-  The Grabba Short

The auto version of the Grabba will automatically detect whether the trend is bullish or bearish once the indicator has been applied to the chart. The Grabba Long will only work in a bullish trend, whilst the Grabba short will only work in a bearish trend.

We would suggest using the Grabba Auto for your trading.

## Inserting and configuring

In order to insert the Grabba indicator on a chart, you will first need to activate the trend dot/price bar where you would like to place the indicator on the chart.

To activate the trend dot/price bar on your chart :

-  **Left click** on **View** and **left click Navigator** in the top level navigation
-  **Left click** on the **+** alongside **Scripts**
-  The following pop up window will open

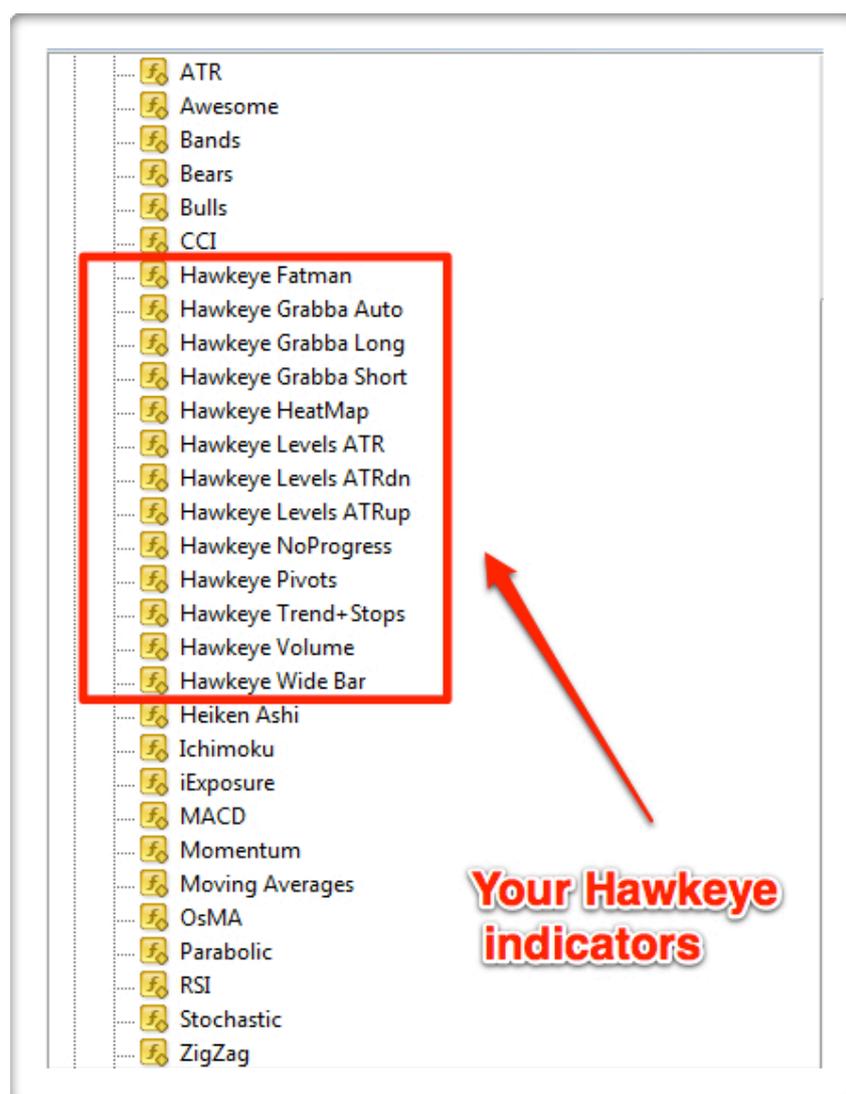

-  **Left click** and **hold** on the **Hawkeye Levels Set Start** script
-  Drag the small script icon to the trend dot/bar where you would like to place the Grabba indicator
-  **Release** to drop the script onto this trend dot/price bar
-  There will be **NO VISUAL SIGNAL** that you have enabled this point on the chart

Having set the starting point on your chart, you are now ready to place the Grabba indicator at this point.

To insert the Grabba indicator on an existing chart simply follow the steps below, using the MT4 Navigator:

-  Within the **Navigator** window
-  **Left click** on the small **+** alongside Custom Indicators

This will display the following window with all your Hawkeye indicators listed in alphabetic order.

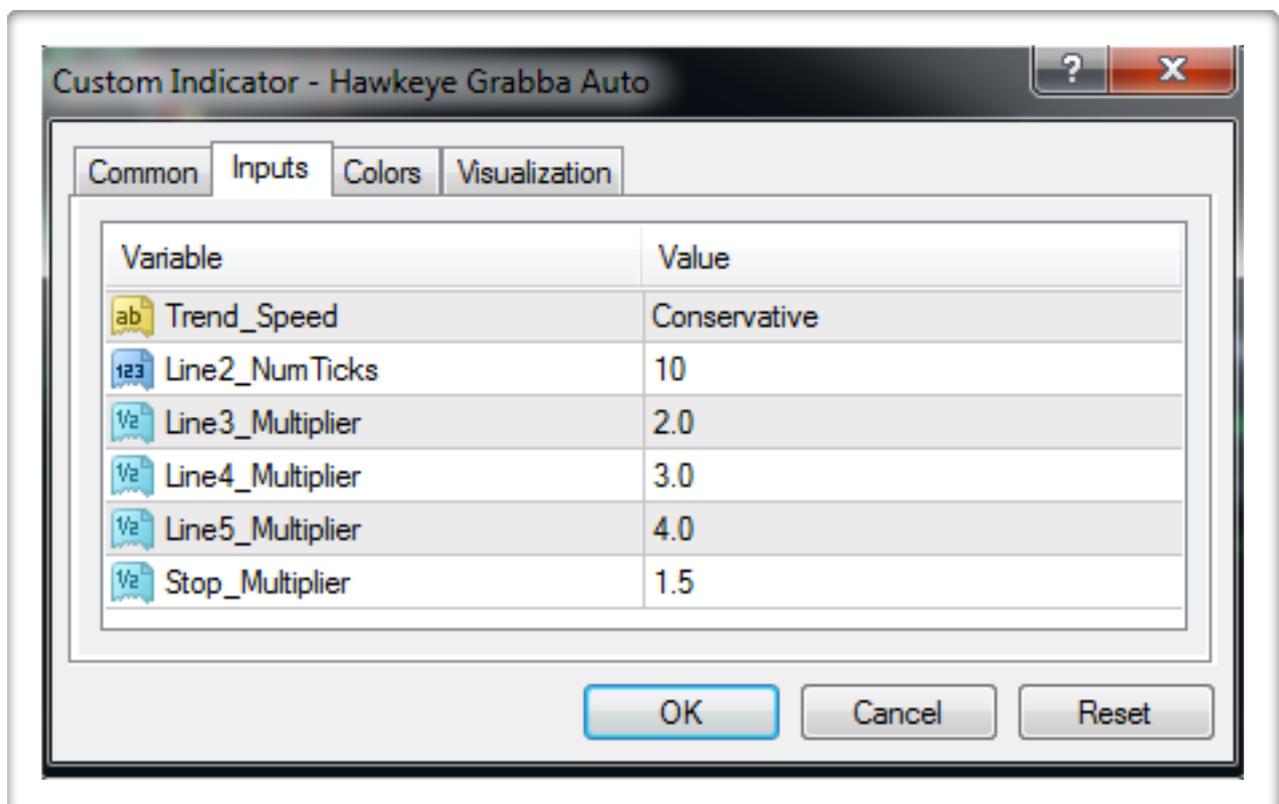

To insert the Hawkeye Grabba indicator:

-  **Left click** on the **Hawkeye Grabba Auto** indicator
-  This will highlight the indicator in **blue**
-  **Left click** and **HOLD** then drag the indicator across to the chart

- 📍 Your pointer will display a small box
- 📍 Once you are hovering over the trend dot/price bar selected using the Levels Set Start Script - then **RELEASE**

The following pop window will then appear and a **left click** on the **Inputs** tab will display the following window:

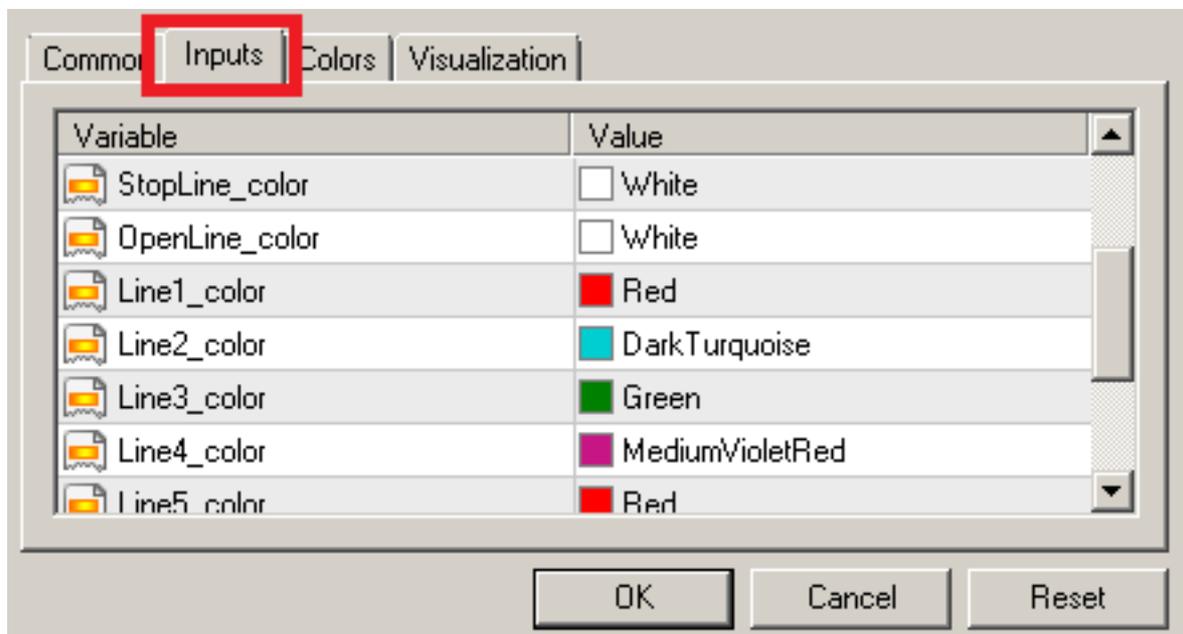

There are a number of user inputs that you can change in the Grabba indicator, and these can be found under the **Inputs** tab in the above window. These are as follows :

-  Trend Speed - this **MUST BE SET** to the Trend and Stops speed on your chart. There are three speeds in Hawkeye. Conservative ( c), Aggressive (a) and Normal (n). You can learn more about these settings in the Trend and Stops indicator section. To change the setting left click on the Trend Speed **Variable** and double left click in the **Value** field. The value can then be changed to one of the above. Left click to another **Variable** to save or left click **OK** to complete.
  
-  Line 2\_Num Ticks - this is where you enter the number of pips, you would like to take at each level. In this case the Grabba has been set to 10, so the levels on the indicator will be built in 10 pip increments
  
-  Line 3 multiplier - will multiply this number by the step increments set on line 2. So in this case the next level would be set at 2 x 10 or 20 pips from the entry price
  
-  Line 4 multiplier - will multiply this number by the step increments set on line 2. So in this case the next level would be set at 3 x 10 or 30 pips from the entry price
  
-  Line 5 multiplier - will multiply this number by the step increments set on line 2. So in this case the next level would be set at 4 x 10 or 40 pips from the entry price

- 📍 Stop multiplier - will multiply this number by the step increments set on line 2, to arrive at your stop loss. In this case your stop loss would then be set at  $10 \times 1.5$  or 15 pips below the open price.

The style and color of the Grabba indicator can be changed in the **Inputs** tab below.

**Left click** on the **Inputs** tab, then select any of the line colors.

Double left click on the Variable field, and then **double left click** on the Value field. A full selection of colors will then appear. **Scroll down** to the color of your choice, **left click**, and continue to the next line. Repeat this process if you wish to change the **Width** and **Style** of the remaining levels.

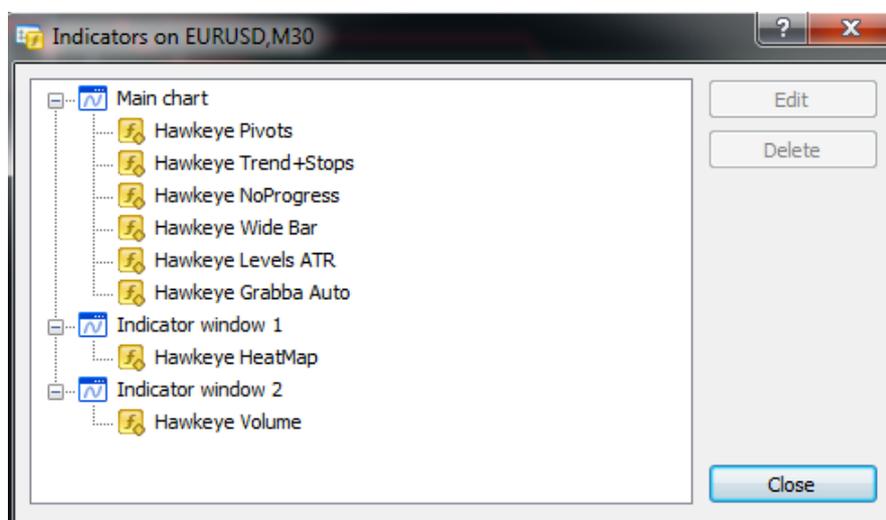

The Grabba displays seven lines on the chart. The stop loss is shown in **cyan**, above the entry level which is shown in **yellow**. Below this is a **magenta line** which is the first target price, the initial profit target. Below this is a solid **green line** followed by **blue**, **red** and **orange**, which define the steps in higher level profit targets, and multiples of the original. These can be changed as above.

When you have finished simply **left click** the **OK button** at the bottom of the window to save and exit, and apply the Grabba indicator at the **Levels Set Start Script** trend dot/price chart point selected.

**NOTE - you can use long and short but these only work in those trends!**

To remove the indicator from the chart completely:

- 🖱️ **Right click** on the chart
- 🖱️ **Left click** on **Indicators List** which will display the following window

-  **Left click** on the **Hawkeye Grabba Auto**
-  **Left click** the **Delete** button to remove the indicator from your chart

## Hawkeye Heatmap Indicator

The Hawkeye Heatmap indicator gives us a visual signal of market sentiment, and at any time will reflect one of four colors. The two most important are bright green for bullish sentiment and bright red for bearish market sentiment. When the markets are in transition or consolidating sideways, then the Heatmap will display as a dark red or a dark green.

The Heatmap indicator is a graphical example of what all three trend speeds, conservative, normal & aggressive are doing on a

single timeframe. When all three trends are in place, then the trend is either bright green or bright red. When one or two of the trends click out, then the Heatmap indicator goes to a dark green or dark red color. It's called the Heatmap because it is an immediate graphical representation of the strength of the trend, and therefore whether the market momentum is in your favor for a low risk trading opportunity.

## Inserting and configuring

There are three simple ways to insert the Heatmap indicator into your MT4 workspaces. These are as follows:

### 1. *Use the MT4 Template Feature*

-  **Left click** on **File**
-  **Left click** on **New Chart** from the drop down menu
-  **Left click** on a currency pair from the drop down window
-  **Right click** anywhere on the chart
-  **Scroll down** to **Template** and hover
-  From the drop down menu **scroll down** to **Hawkeye Full**
-  **Left click** on **Hawkeye Full**

This will then load the chart with ALL the Hawkeye indicators installed, along with the Hawkeye Heatmap.

## 2. *Use the MT4 Profiles Feature*

Left click on **File**

Left click on **Profiles** from the drop down menu

Left click on a **Hawkeye profile** from the drop down window

Again, this will load a chart with ALL the Hawkeye indicators already installed along with the Heatmap indicator

## 3. *Use the MT4 Navigator Feature*

If you want to add the Heatmap indicator to your chart, then use the Navigator feature as follows :

Left click on **View** in the top level navigation

Scroll down to **Navigator** from the drop down menu

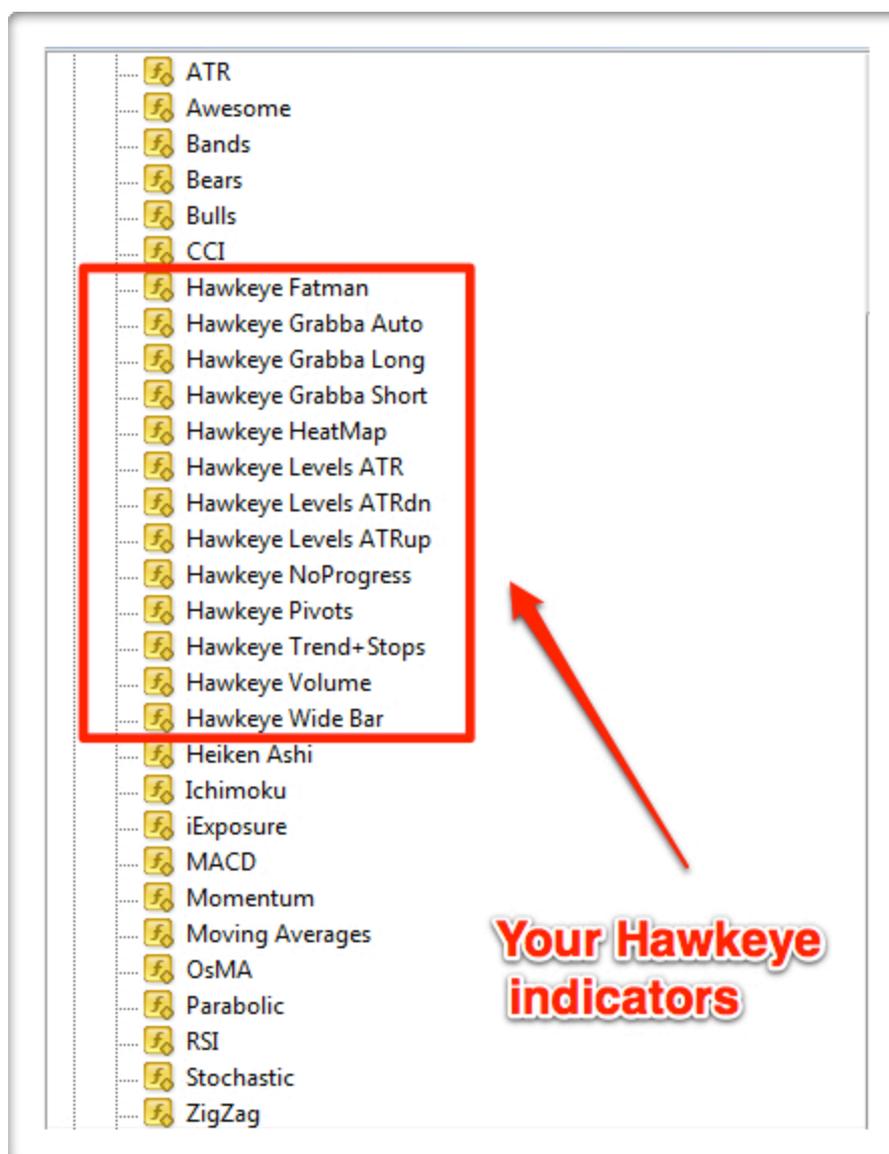

Left click on **Navigator**

Left click on the small **+** alongside Custom Indicators

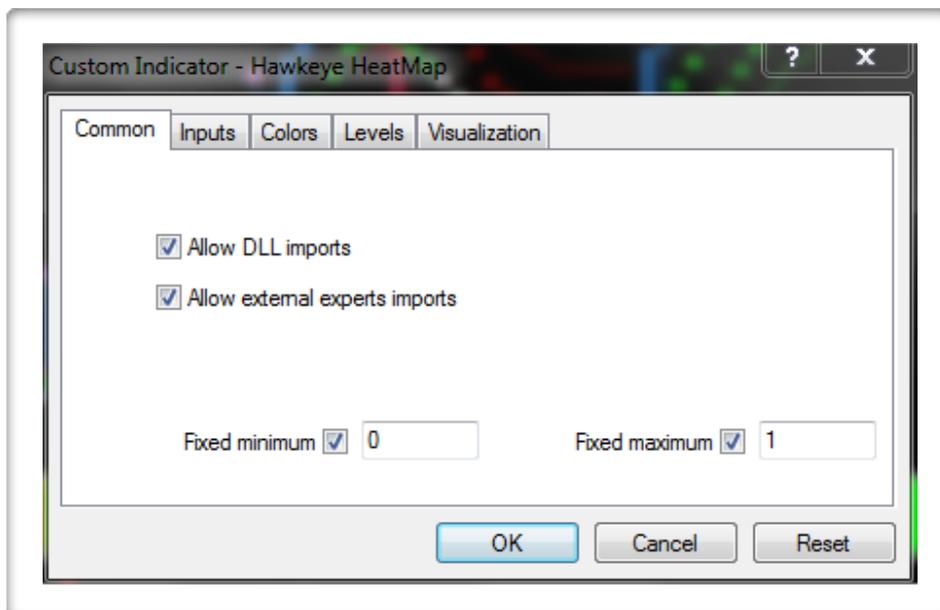

This will display the following window with all your Hawkeye indicators listed in alphabetic order.

- 📌 **Left click** on the Hawkeye Heatmap indicator
- 📌 This will highlight the indicator in **blue**
- 📌 **Left click** and **HOLD** then drag the indicator across to the chart

- 🖱 Your pointer will display a small box
- 🖱 Once you are hovering over the chart then **RELEASE**

The following pop up window will then appear:

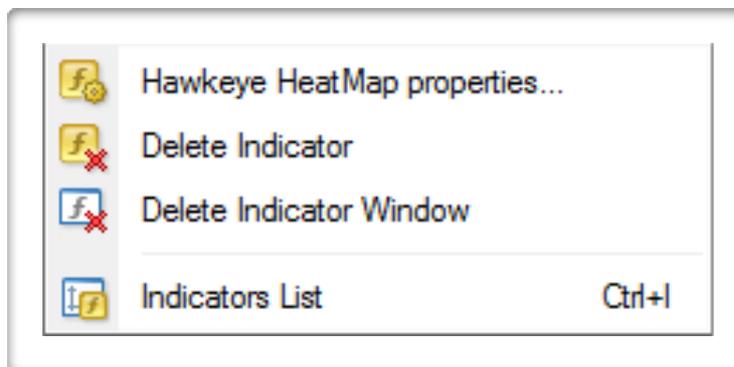

**Left click** on the OK button to install the Heatmap indicator on your chart.

### Format and Input settings

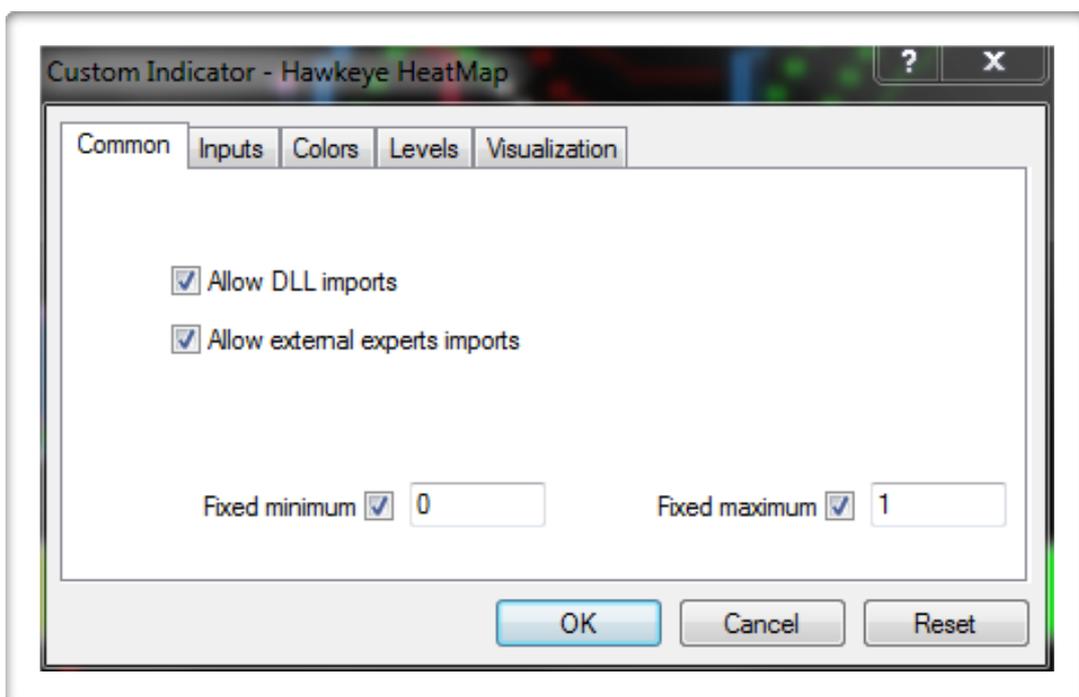

There are **NO** user inputs for the Hawkeye Heatmap indicator. You do have the option to change the color and style of the indicator under the **Colors tab** in the window above, along with setting the alerts.

To change the settings for the indicator follow these steps :

- 📍 Navigate to your chart
- 📍 **Right click** on the Hawkeye Heatmap
- 📍 The following pop up window will appear:

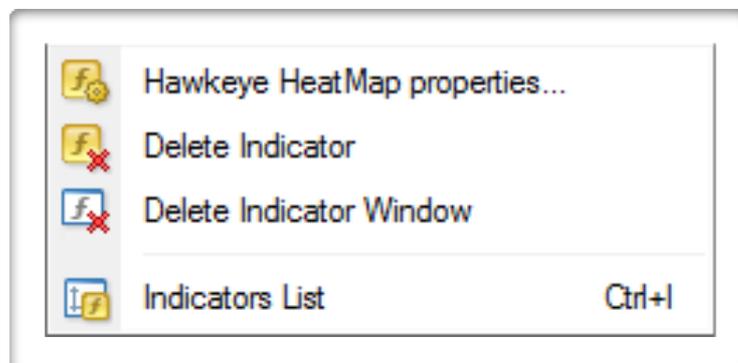

- 📍 **Left click** on Hawkeye Heatmap properties
- 📍 The following pop up window will appear:

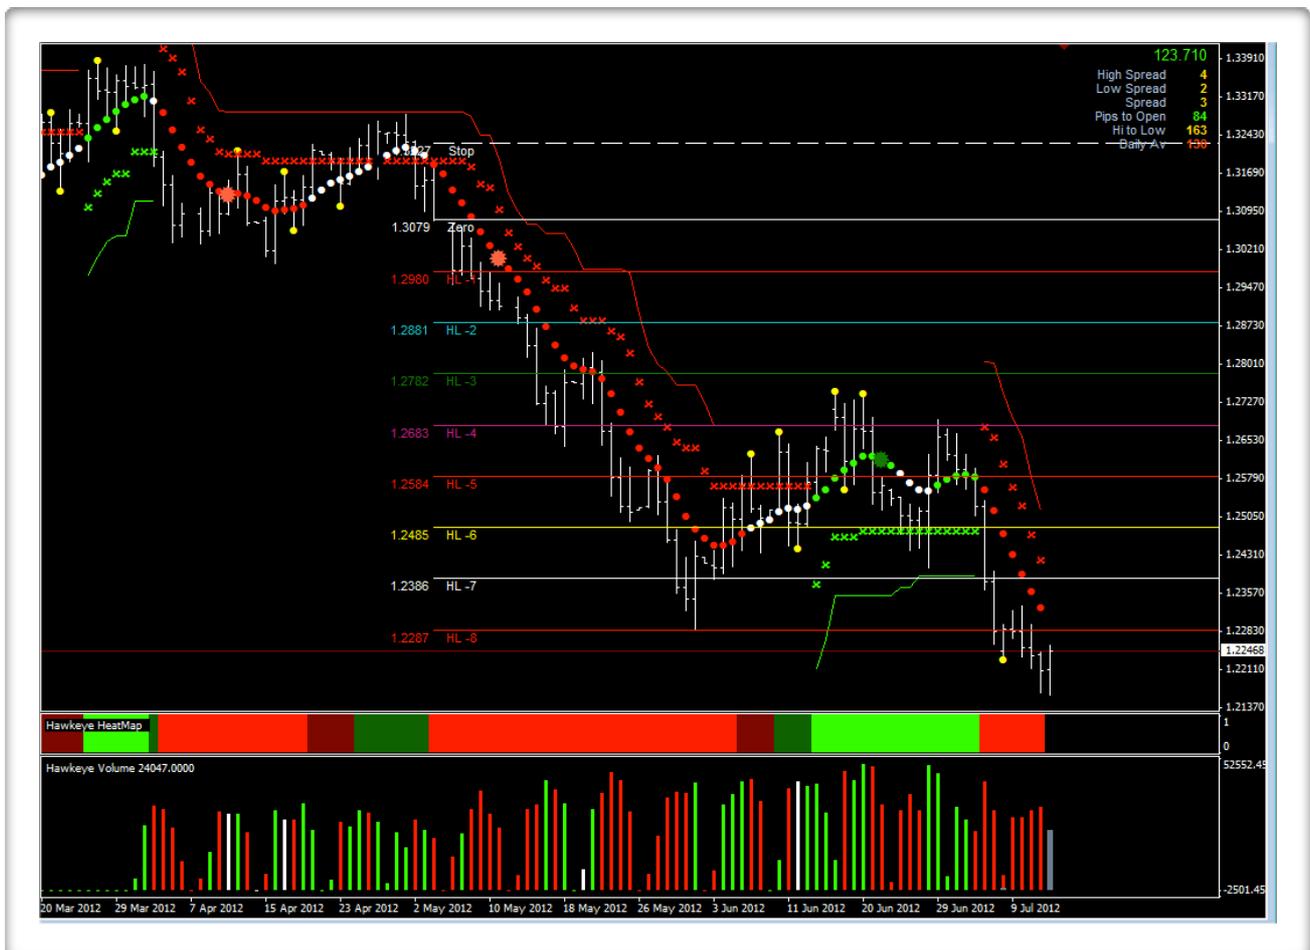

- 📌 **Left click** on the **Inputs** tab
- 📌 **Double left click** on the **Value** to change from On to Off or from Off to On
- 📌 **Left click** on the Colors tab
- 📌 **Double left click** on the Color, Width or Style column to change any of these settings
- 📌 **Left click** on the **OK** button to finish

To remove the indicator from the chart completely:

- 📌 **Right click** on the Hawkeye Indicator
- 📌 This will display the following pop up window
- 📌 **Left click** on the Delete Indicator to remove the Heatmap from your chart

## Hawkeye Levels ATR Indicator

The Hawkeye levels ATR indicator is a powerful risk and money management tool, which has been designed to scale you out of a position.

The Hawkeye levels ATR indicator AUTOMATICALLY displays the OPTIMAL profit target levels for the market, once a trend is established.

This unique indicator uses average true range based on a number of pre-determined price bars to establish measured profit target levels.

These numbers, combined with volume and standard deviation, give an unprecedented advantage as to where the market will turn and where to take profits. Scaling out of a profitable position is an excellent way for traders to build up their confidence, by taking money off the table as the trend develops. ATR stands for Average True Range.

The software looks back over 14 bars and calculates the average true range over these bars, and then places the levels on the chart and set to 1 x times, 2 x times, 3, x times, 4 x times, and finally 5 x times the average true range. This is a user input which can be defined by you, but the **default setting is ONE**. You can also default your stop, **and we recommend 1.5**.

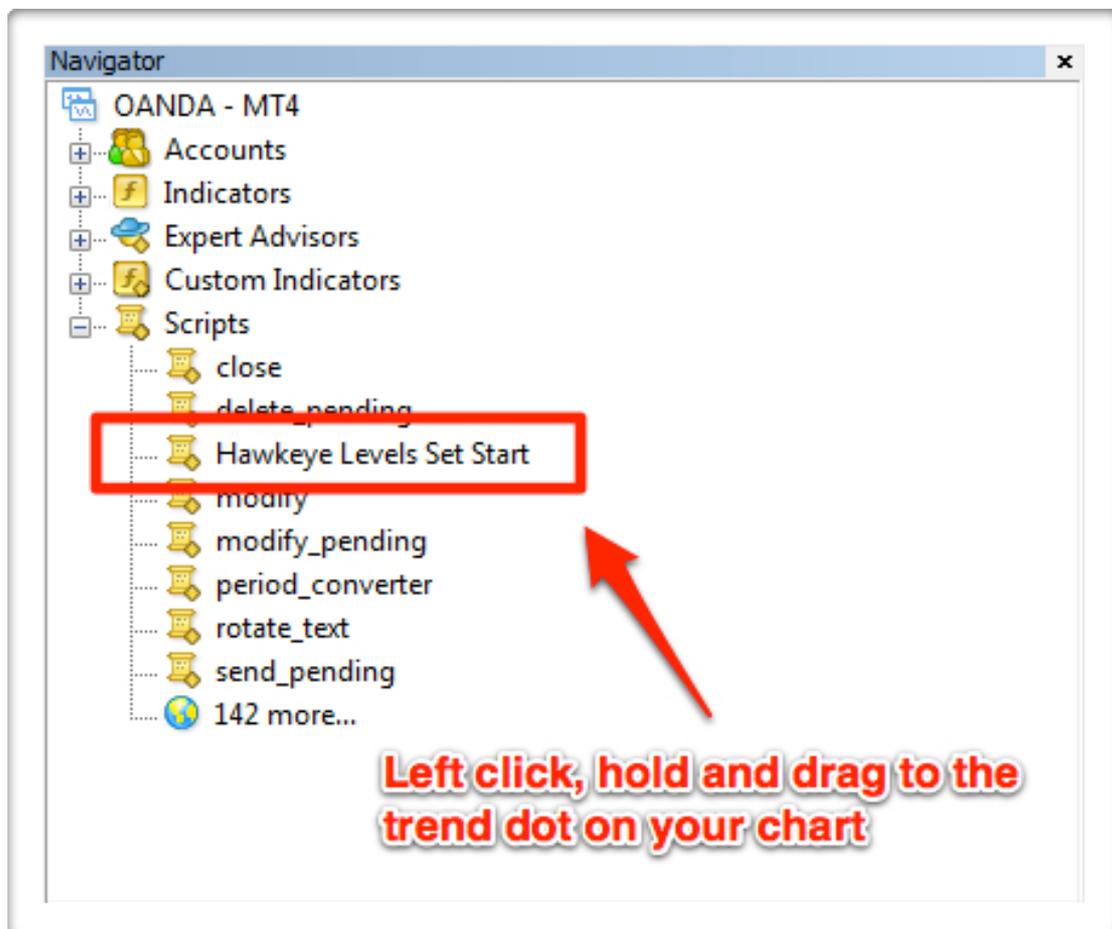

There are three versions of this indicator, Hawkeye Levels, Hawkeye Levels ATRdn and Hawkeye Levels STRup. The first of these will automatically detect the direction of the trend, while the other two will only work on that particular trend direction. The **dn** will work in a **DOWN** trend and the **up** in an **UP** trend. They are all applied, used and removed in the same way.

### **Inserting and configuring**

In order to insert the Hawkeye Levels ATR indicator on a chart, you will first need to activate the trend dot/price bar where you would like to place the indicator on the chart.

To activate the trend dot/price bar on your chart :

- 📌 **Left click** on **View** and **left click Navigator** in the top level navigation
- 📌 **Left click** on the **+** alongside **Scripts**
- 📌 The following pop up window will open

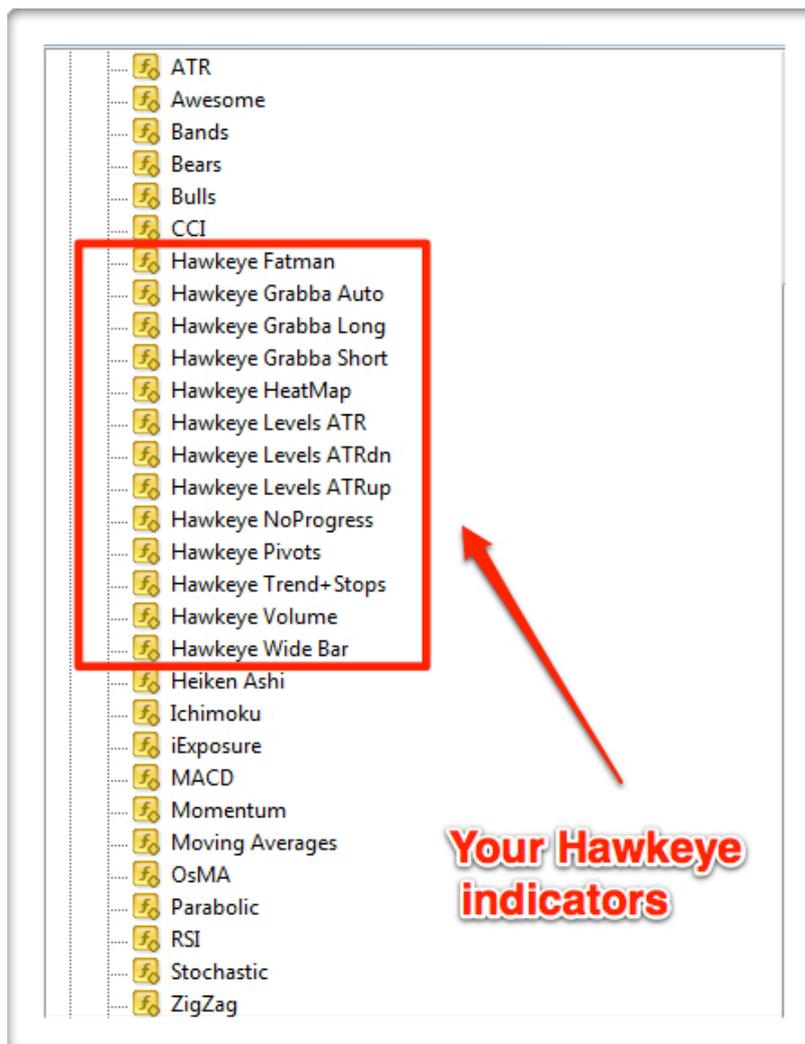

-  **Left click** and **hold** on the **Hawkeye Levels Set Start** script
-  Drag the small script icon to the trend dot/bar where you would like to place the Grabba indicator
-  **Release** to drop the script onto this trend dot/price bar
-  There will be **NO VISUAL SIGNAL** that you have enabled this point on the chart

Having set the starting point on your chart, you are now ready to place the Hawkeye Levels ATR indicator at this point.

To insert the Hawkeye Levels ATR indicator on an existing chart simply follow the steps below, using the MT4 Navigator:

-  Within the **Navigator** window
-  **Left click** on the small **+** alongside Custom Indicators

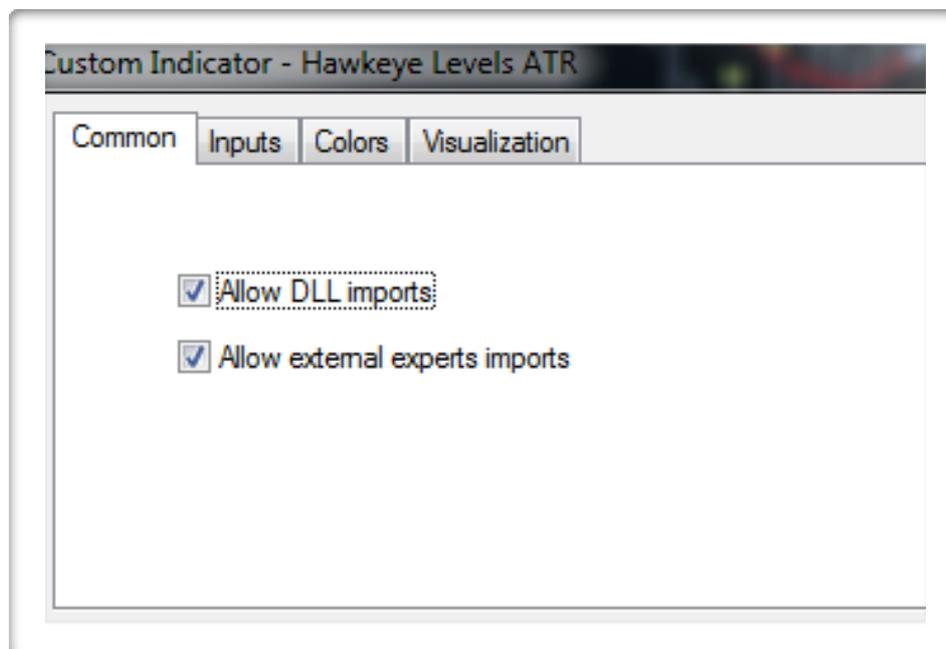

This will display the following window with all your Hawkeye indicators listed in alphabetic order.

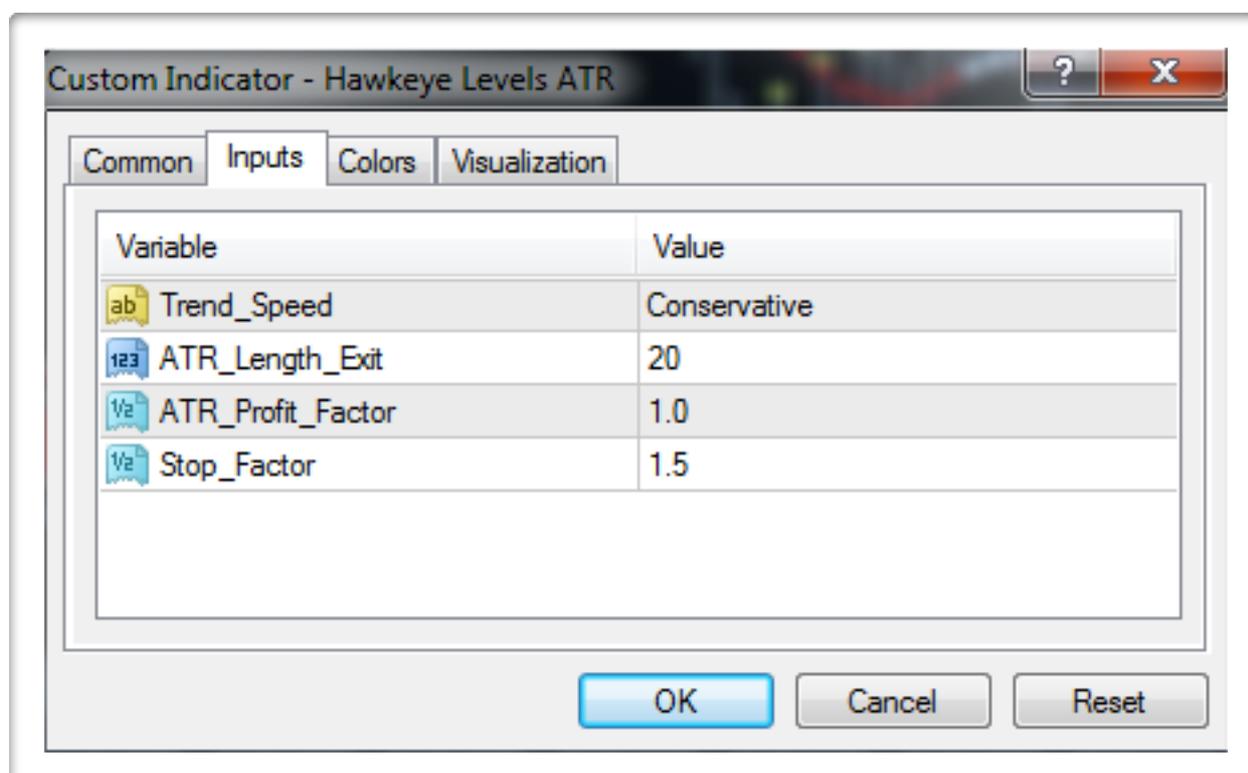

To insert the Hawkeye Levels ATR indicator:

- 🖱️ **Left click** on the Hawkeye Levels ATR indicator
- 🖱️ This will highlight the indicator in **blue**
- 🖱️ **Left click** and **HOLD** then drag the indicator across to the chart
- 🖱️ Your pointer will display a small box
- 🖱️ Once you are hovering over the chart then **RELEASE**

The following pop window will then appear:

Left click on the **Inputs** tab which will then display the following window:

There are **FOUR** inputs to change in the Levels ATR indicator.

-  Trend speed
-  ATR Length Exit
-  ATR Profit Factor
-  Stop Factor

The **Trend Speed** determines the speed of the trend, and this is explained more fully in the Hawkeye Trend and Stops indicator. Hawkeye has three trend speeds as follows :

-  Aggressive ( a)
-  Normal (n)
-  Conservative (c)

**The trend speed of the Levels ATR indicator must always match the setting for the Trend and Stops indicator on the chart.**

To change the trend speed, **left click** on the **Variable** field, then **double left click** on the **Value** field. Enter **Aggressive**, **Conservative** or **Normal** as appropriate.

The **ATR Length Exit** is the number of bars in the look back calculation and we suggest 20 as the default as shown above.

The **ATR Profit Factor** is the multiplier applied - we suggest using the default of 1 as shown above.

Finally the **Stop Factor** calculates the position of your stop loss based on this figure. This means the stop will automatically be set to 1.5 x the setting of the levels above.

The Levels ATR indicator displays nine lines on the chart. The stop loss is shown as a dotted white line, below the entry level ( Zero) which is also shown in white.

Above this are the eight levels, labeled +1 to + 8, or -1 to -8. The levels will be displayed as follows :

 Stop - dotted white line

 Zero - solid white line

 Level 1 - red

 Level 2 - blue

 Level 3 - green

 Level 4 - purple

 Level 5 - red

 Level 6 - yellow

 Level 7 - white

 Level 8 - red

To add the Levels ATR indicator to your chart, **left click** on the **OK** button once you have made any changes to the inputs

To remove the indicator from the chart completely:

- 🖱️ **Right click** on the chart
- 🖱️ **Left click** on **Indicators List** which will display the following window

- 🖱️ **left click** on **Hawkeye Levels ATR**
- 🖱️ **Left click** the **Delete** button to remove the indicator from your chart

## Hawkeye No Progress Indicator

The No Progress indicator works in conjunction with the Trend and Stops indicator, and produces a large dot on the trend, after the seventh dot has been formed of a new trend.

The No Progress indicator is a powerful money management indicator for managing an existing position, and is an alert designed to ask us a very simple question – should we stay in, or close out.

The No Progress indicator gives us a visual alert, a large red star in a down trend, and a large green star in an up trend, and tells us to check our position in the market.

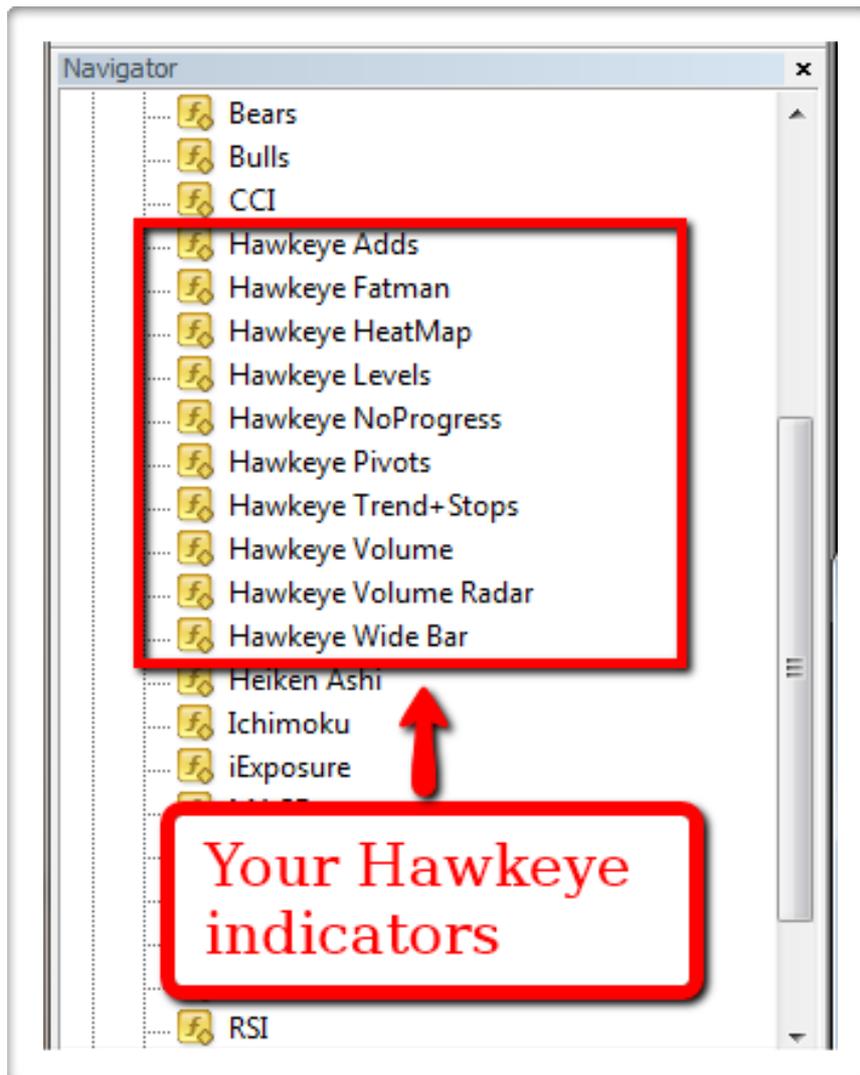

### Inserting and configuring

The No Progress indicator is part of the Trend and Stops indicator.

To insert the No Progress indicator on an existing chart simply follow the steps below, using the MT4 Navigator:

-  **Left click** on **View** in the top level navigation
-  **Scroll down** to **Navigator** from the drop down menu
-  **Left click** on **Navigator**
-  **Left click** on the small **+** alongside Custom Indicators

This will display the following window with all your Hawkeye indicators listed in alphabetic order.

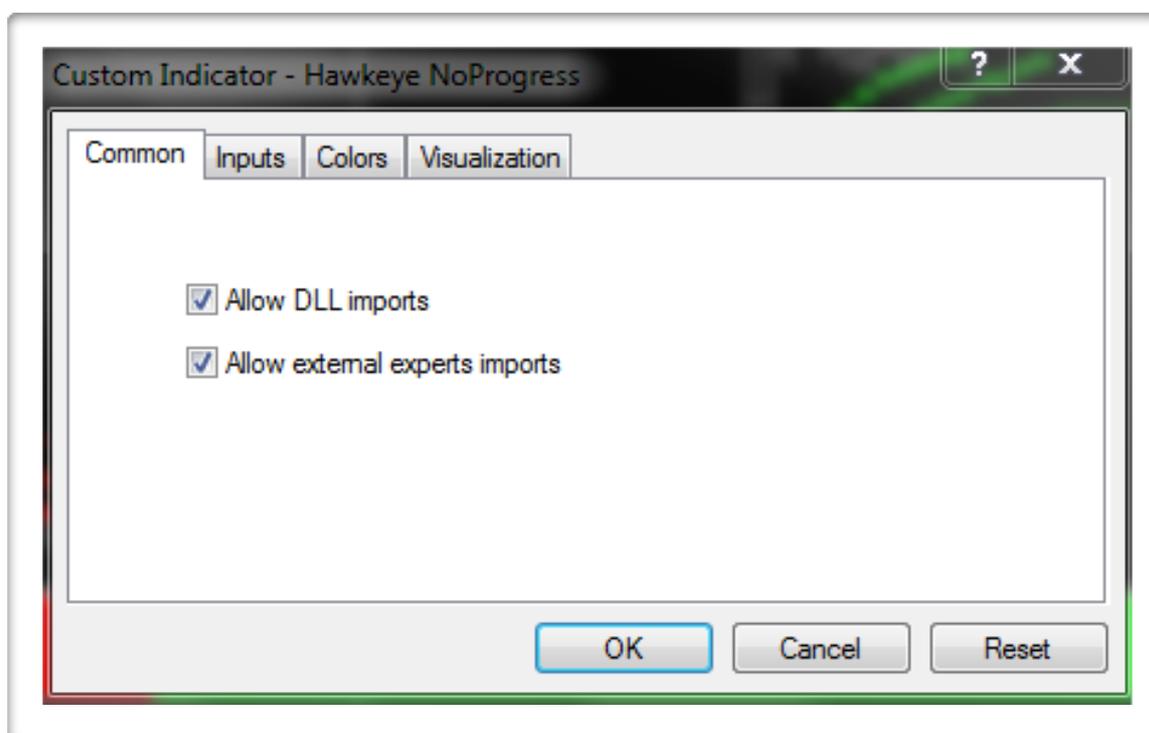

To insert the Hawkeye No Progress indicator:

- 🖱️ **Left click** on the Hawkeye No Progress indicator
- 🖱️ This will highlight the indicator in **blue**
- 🖱️ **Left click** and **HOLD** then drag the indicator across to the chart
- 🖱️ Your pointer will display a small box

 Once you are hovering over the chart then **RELEASE**

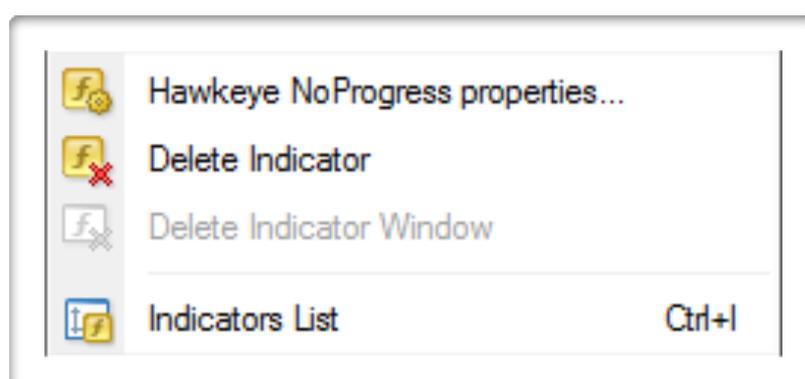

The following pop window will then appear:

Left click the OK button to install the No Progress indicator on your chart

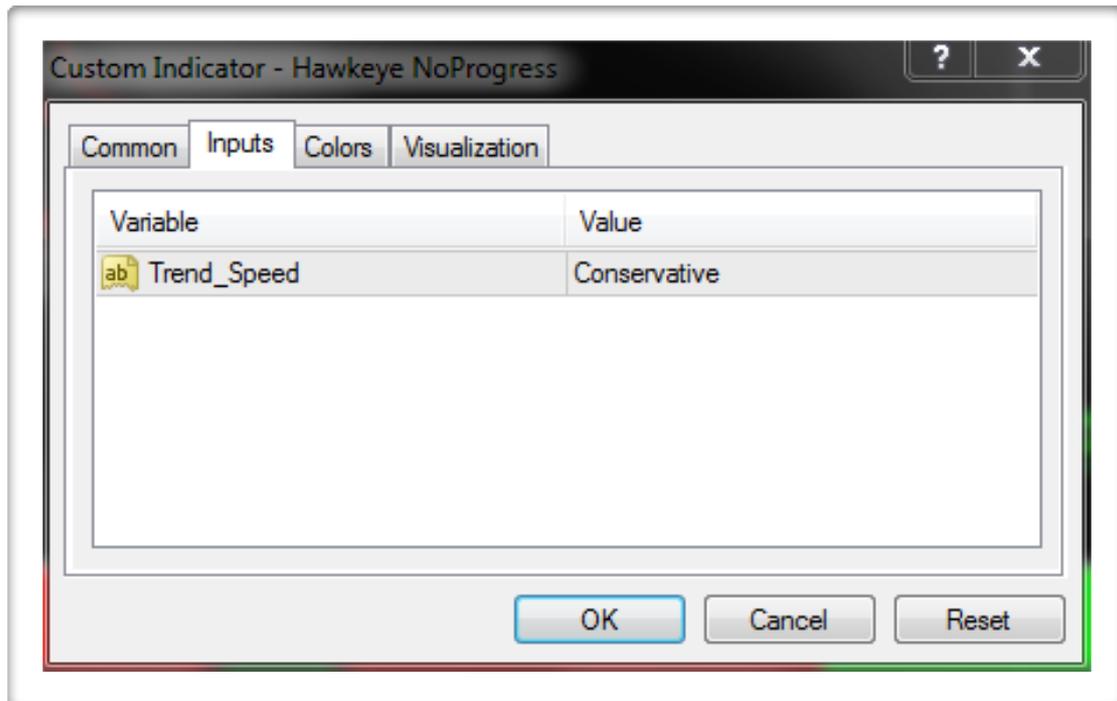

The Hawkeye No Progress indicator is part of the Trend and Stops indicator, and has ONE input setting which must be configured to match the settings on your Trend and Stops indicator. In addition you can also change the colors for the indicator, and this is done as follows :

- 🔊 Either **right click** on the chart and **left click** on **Indicators list** from the pop up window
- 🔊 Then **left click** on Hawkeye NoProgress and **left click** on the **Edit** button alongside
- 🔊 **OR**
- 🔊 **Hover** over a NoProgress Red or Green star until a small grey window appears with the NoProgress details
- 🔊 **Right click** and the following window will appear

- 🔊 Then **left click** on the Hawkeye NoProgress properties
- 🔊 Left click on the **Inputs** tab

This will bring up the following window for editing the settings for the indicator

The NoProgress indicator is part of the Trend and Stops indicator which is covered in more detail, later in this user manual. The Trend and Stops indicator, has three trend speeds : **aggressive**, **normal** and **conservative**.

**The trend speed setting for the NoProgress indicator MUST BE THE SAME as for the Trend and Stops indicator.**

To change the settings follow these steps :

- 📌 Left click on the **Inputs** tab below
- 📌 Left click on the **Trend Speed**
- 📌 Double left click on the **Value** property
- 📌 **Delete** the current setting
- 📌 Change to one of the following to **MATCH** the Trend and Stops indicator:

 Aggressive

 Normal

 Conservative

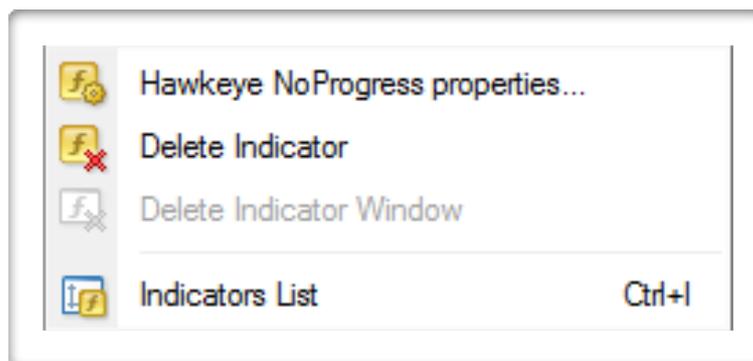

Enter one of these in the **Value** box and press return on your keyboard

Finally you can change the colors under the **Colors** tab, then **left click** on the OK button to save and exit

To remove the indicator from the chart completely:

 **Right click** on the Hawkeye Indicator

 This will display the following pop up window

 **Left click** on the Delete Indicator to remove the NoProgress indicator from your chart

If you are using one of the pre- configured charts supplied with your package, then the NoProgress indicator will already be installed on your chart.

This can be removed in the same way. Simply **left click** on the No Progress indicator on the chart and follow the steps above.

## Hawkeye Pivots Indicator

The Hawkeye Pivots indicator produces a signal each time a new pivot point is created on the chart, and these appear as yellow dots immediately above or below the price bar. As potential signals of trend reversal, as well as possible breakout signals, these pivot points can be used in conjunction with your other indicators to provide a further confirmation signals.

These small yellow dots that appear on the chart are extremely important. They are like the points on a compass, giving you your bearings as you travel in unknown territory.

They show you isolated highs and isolated lows. An isolated high occurs where the middle bar has a higher high and a higher low than the previous and the next bar. An isolated low occurs where the middle bar has a lower high and a lower low than the previous and the next bar.

Once a pivot has been formed, we then expect a 3, 5, or 7 bar reversal of price off that pivot. If that doesn't happen and price continues straight on up, or down, then it's a sign of strength. It shows that the pivot is not holding. The power of the pivot, is simple - once it appears on the chart, then you know that the price is likely to reverse. If you know the market is going to reverse, then this takes away that fear - it's a normal occurrence.

After all, trends never go straight up. They move up and down in steps, with the pivots defining these steps. So, when you see an isolated high, then expect to see the market go down between 3,5, or 7 bars.

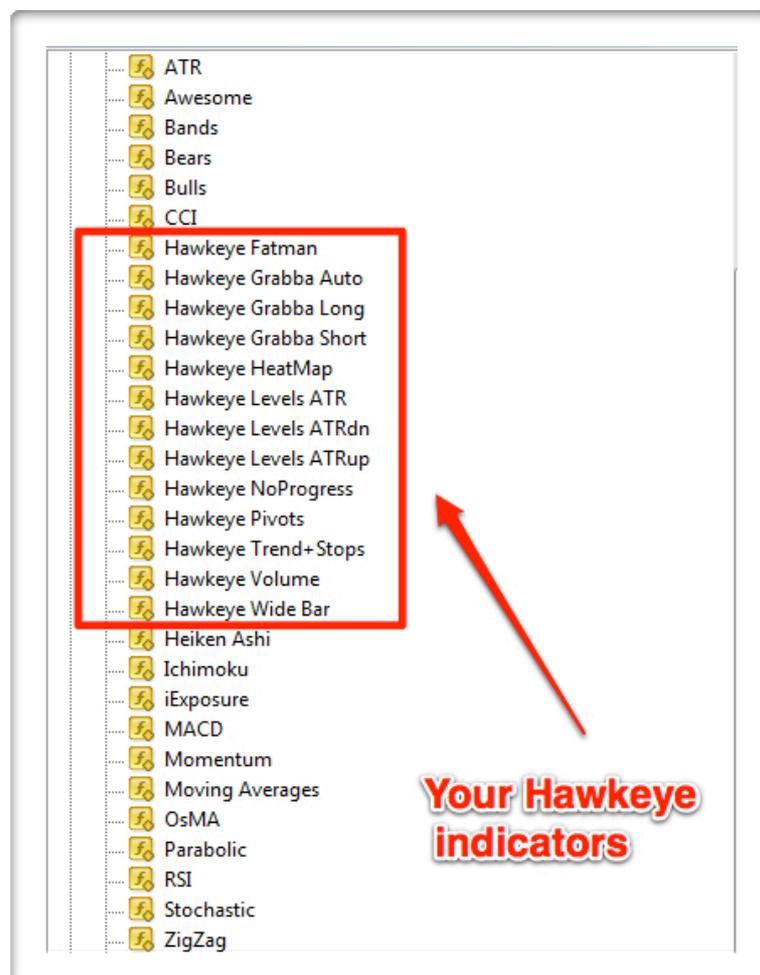

The same occurs with an isolated low which will push the price back up by the same number of bars, 3, 5 or 7.

## Inserting and configuring

To insert the Pivots indicator on an existing chart simply follow the steps below, using the MT4 Navigator:

-  **Left click** on **View** in the top level navigation
-  **Scroll down** to **Navigator** from the drop down menu
-  **Left click** on **Navigator**
-  **Left click** on the small **+** alongside Custom Indicators

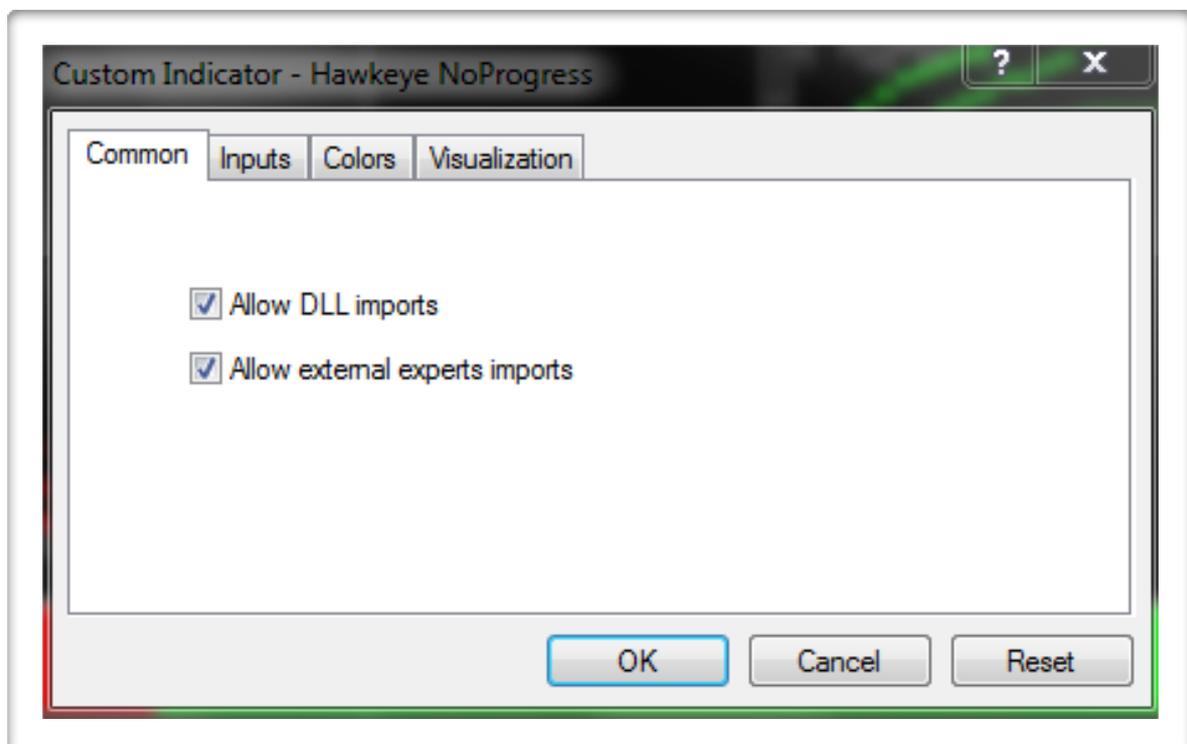

This will display the following window with all your Hawkeye indicators listed in alphabetic order.

To insert the Hawkeye Pivots indicator:

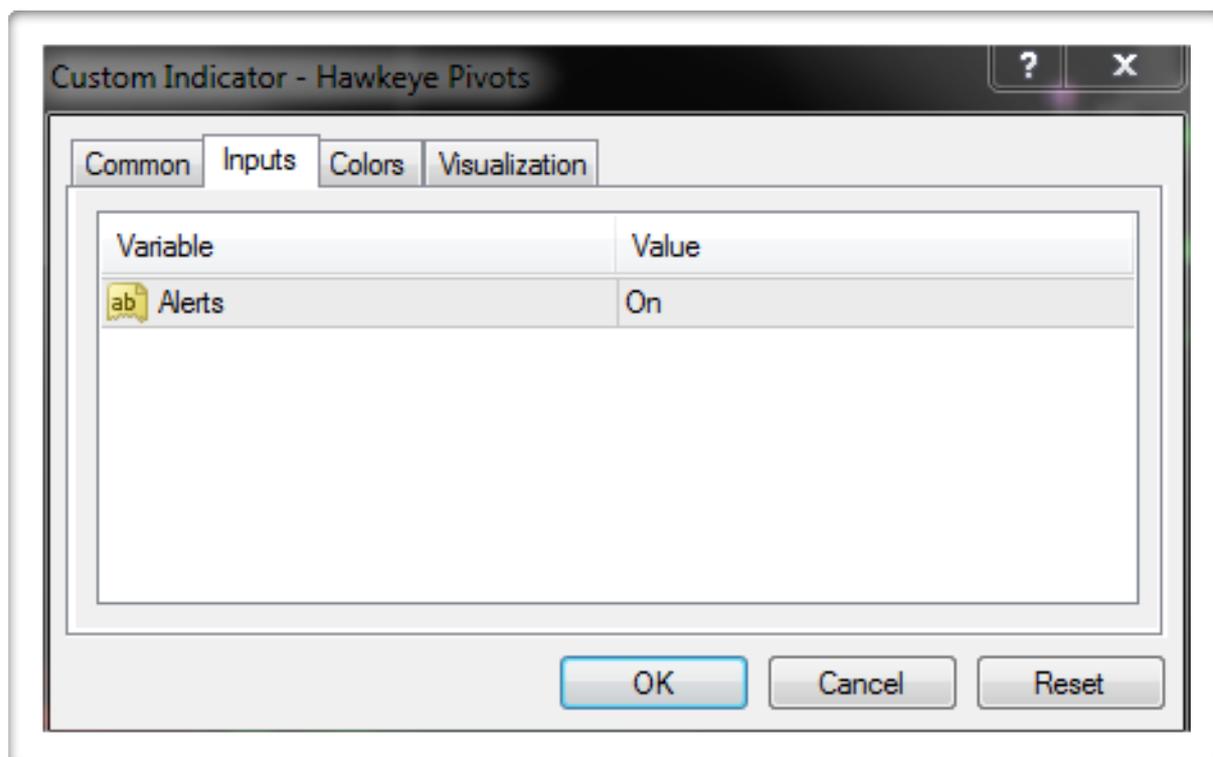

- 🖱️ **Left click** on the Hawkeye Pivots indicator
- 🖱️ This will highlight the indicator in **blue**
- 🖱️ **Left click** and **HOLD** then drag the indicator across to the chart
- 🖱️ Your pointer will display a small box
- 🖱️ Once you are hovering over the chart then **RELEASE**

The following pop window will then appear:

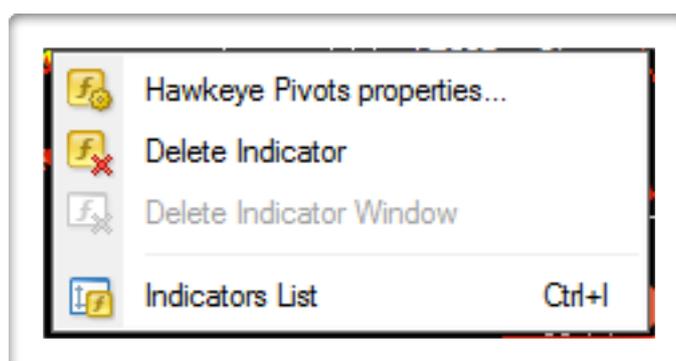

- 📌 Left click on the **OK** button to install the Pivots indicator on your chart

There are **NO user inputs for this indicator**, other than changing the colors in the **Colors** tab, and the Alerts setting in the **Inputs** tab.

To remove the indicator from the chart completely:

- 📌 **Right click** on the Hawkeye Pivots Indicator
- 📌 This will display the following pop up window

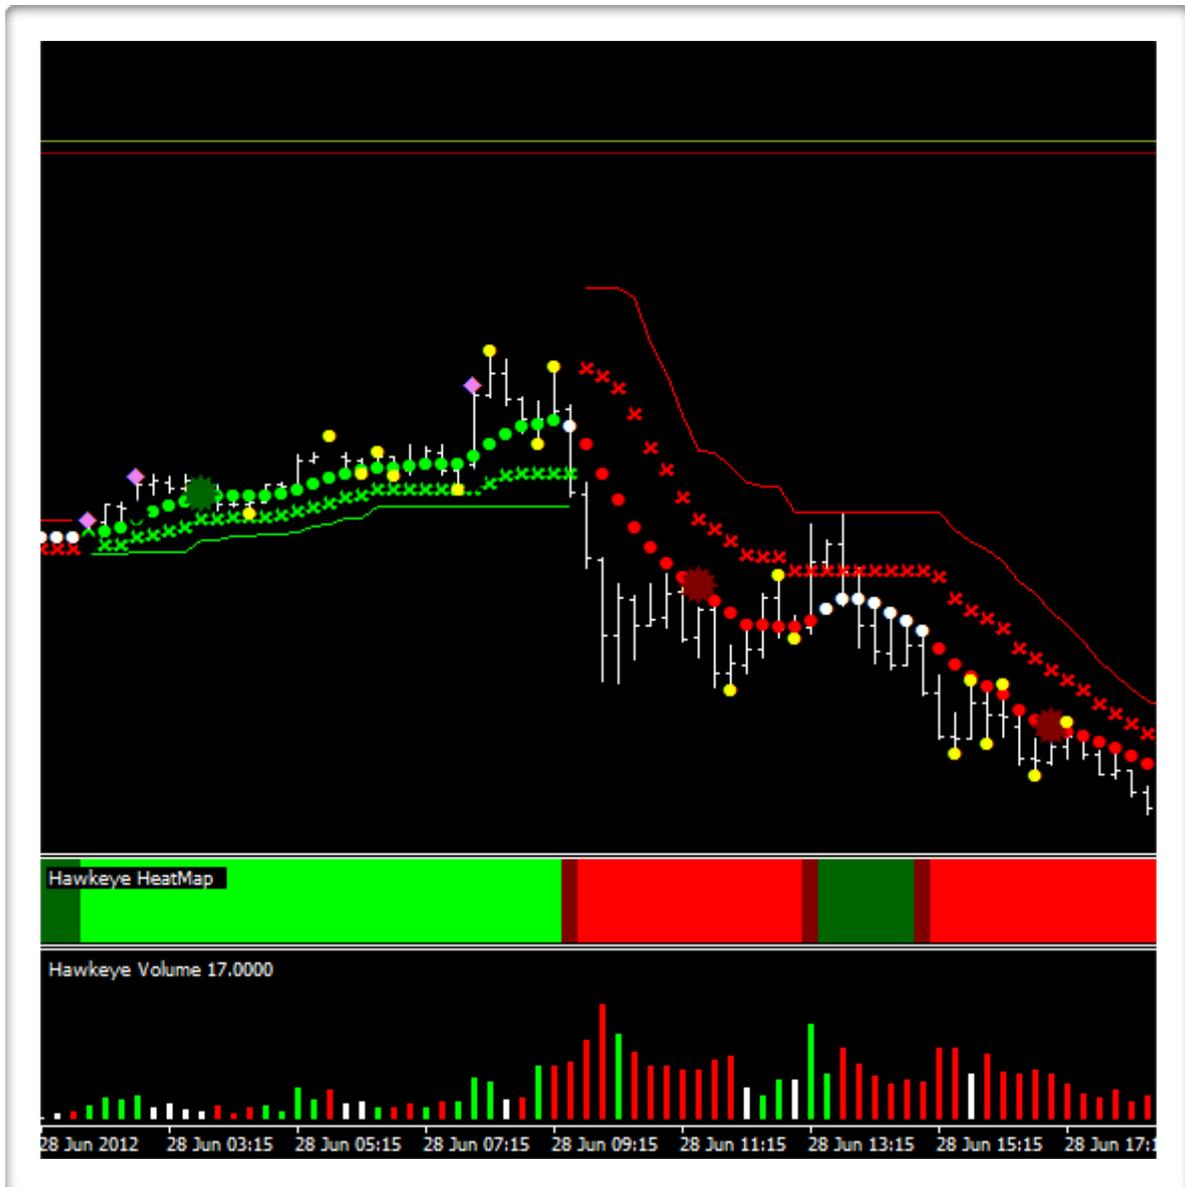

**Left click** on the Delete Indicator to remove the Pivots indicator from your chart

If you are using one of the pre- configured charts supplied with your package, then the Pivots indicator will already be installed on your chart

## Hawkeye Trend and Stops Indicator

The Hawkeye Trend and Stops is another of the principle indicators within the Hawkeye trading suite of tools.

Along with the Hawkeye volume indicator, the Trend and Stops indicator provides the foundation of the volume price analysis methodology, which lies at the heart of the Hawkeye suite of tools.

Indeed, the Hawkeye Trend and Stops indicator is the real engine room of Hawkeye.

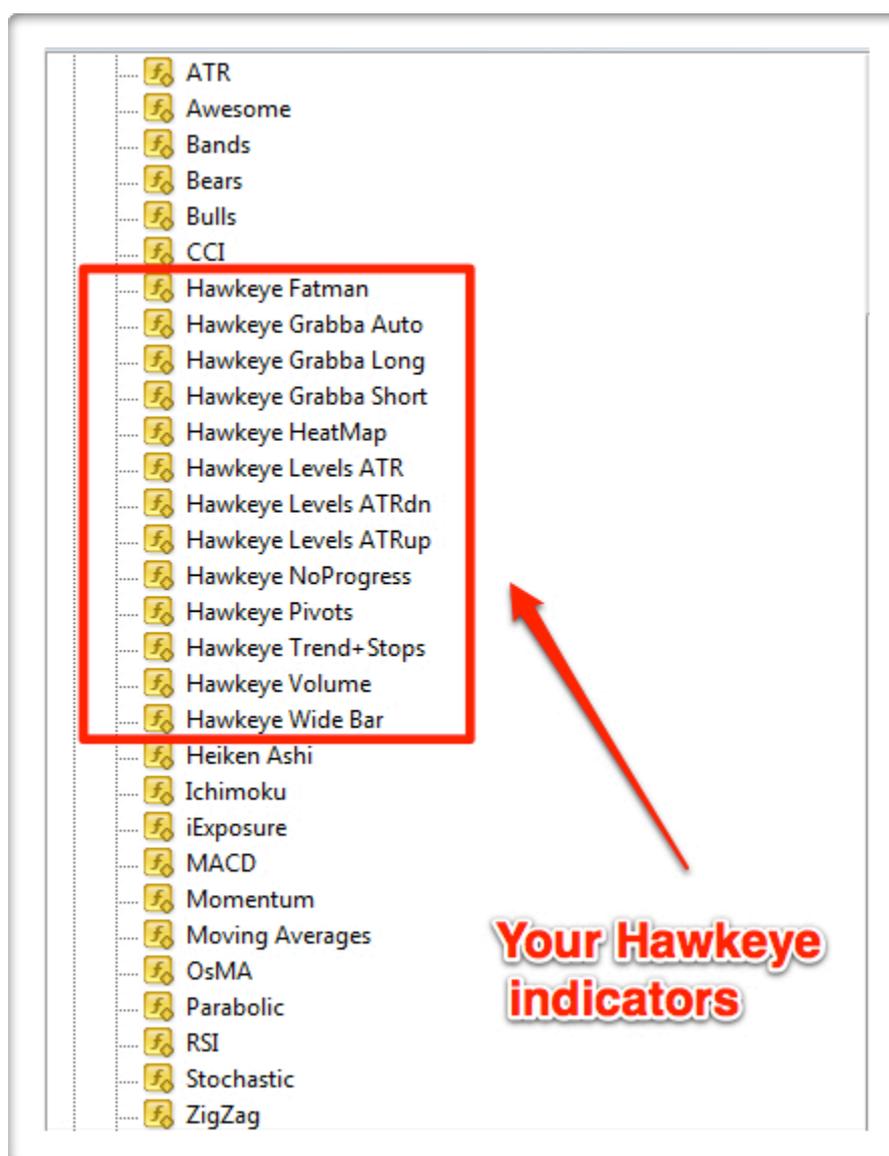

The Trend and Stops indicator is in fact two indicators in one, combining the Stop indicator, with the Crash Barrier indicator, and the Trend indicator. These blend into a unified and unique set of tools, to provide powerful market direction signals, coupled with indicators which offer strict money management and risk levels, all presented using clear and colorful visual symbols.

### Inserting and configuring

To add the Trend and Stops indicator to a current chart simply follow the steps below, using the MT4 Navigator:

-  **Left click** on **View** in the top level navigation
-  **Scroll down** to **Navigator** from the drop down menu
-  **Left click** on **Navigator**
-  **Left click** on the small **+** alongside Custom Indicators

This will display the following window with all your Hawkeye indicators listed in alphabetic order.

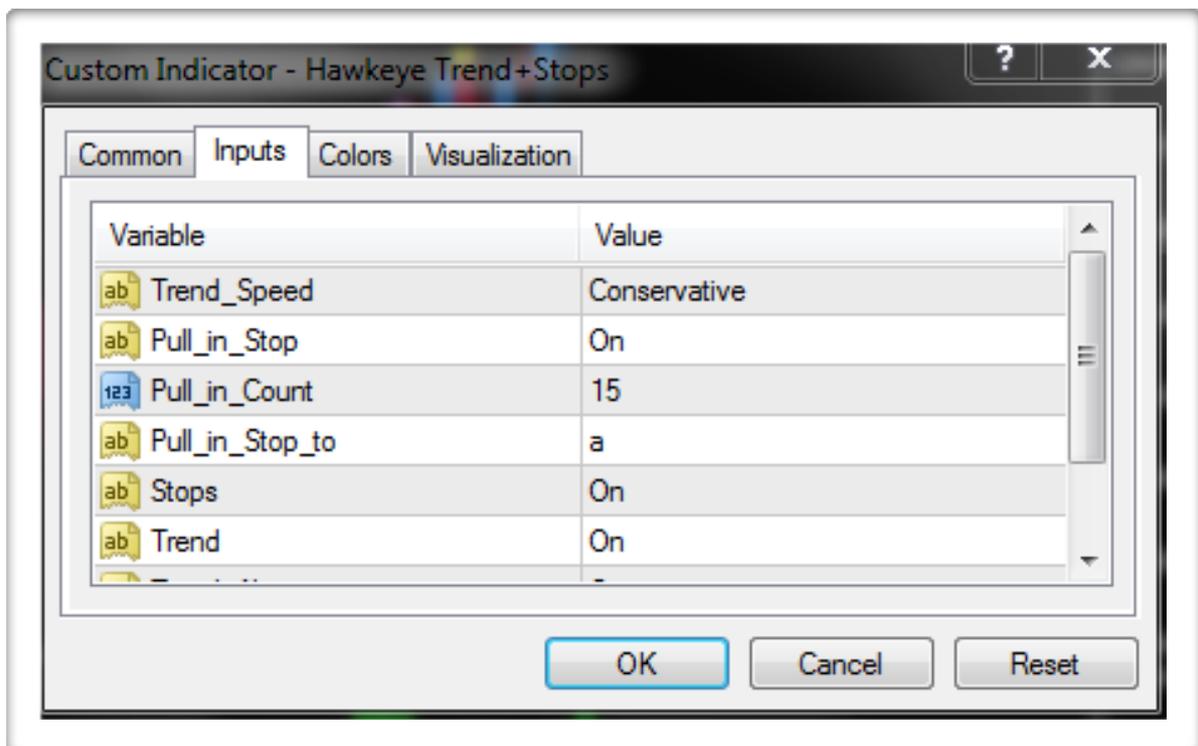

To insert the Hawkeye Trend and Stops indicator:

- 🖱️ **Left click** on the Hawkeye Trend and Stops indicator
- 🖱️ This will highlight the indicator in **blue**
- 🖱️ **Left click** and **HOLD** then drag the indicator across to the chart
- 🖱️ Your pointer will display a small box

- Once you are hovering over the chart then **RELEASE**

The following pop window will then appear:

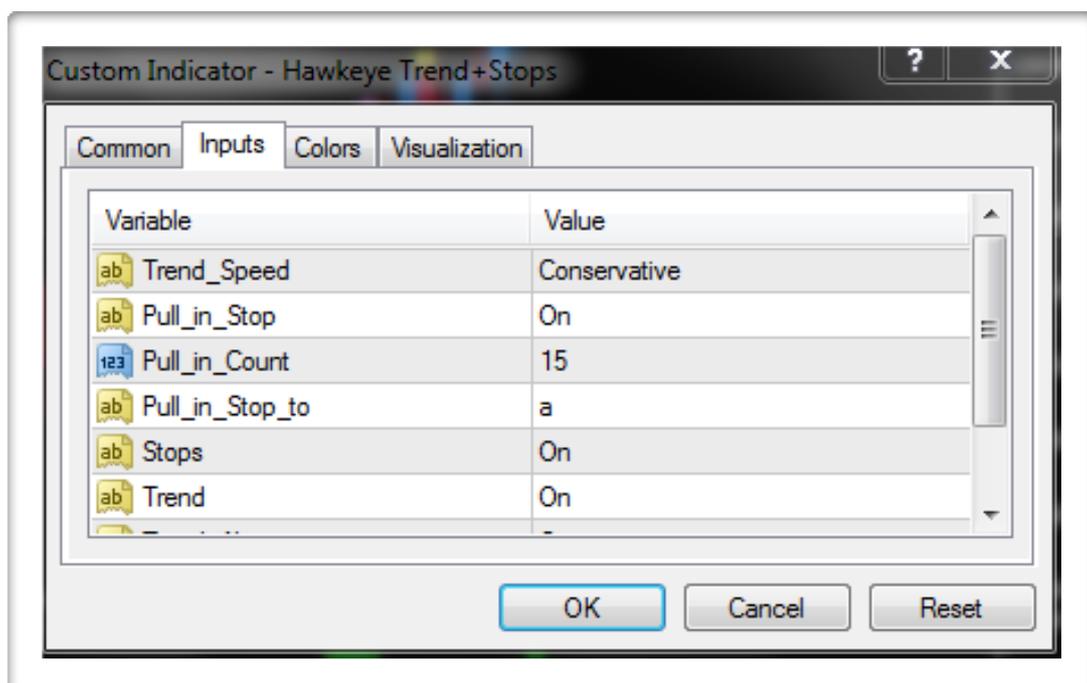

- Left click on the OK button to install the Trend and Stops indicator on your chart

There are several user input settings that you can change for the Trend and Stops indicator, and these are all found under the Inputs tab in the above window. These can be accessed in two ways as follows :

- 1. Either **right click** on the chart and **left click** on **Indicators list** from the pop up window
- 2. Then **left click** on Hawkeye Trend + Stops and **left click** on the **Edit** button alongside
- 3. **OR**
- 4. **Hover** over a trend dot until a small grey window appears with the Trend + Stops details
- 5. **Right click**
- 6. Then **left click** on the Hawkeye Trend + Stops properties
- 7. Left click on the **Inputs** tab

This will bring up the following window for editing the settings for the indicator

To change any property, **left click** on the **Variable** field. Then **double left click** on the **Value** field. This will then place your cursor in the **Value** field allowing you to change or edit the setting accordingly. The changed property will then appear in the property field.

### ***Trend Speed***

The input value can be **Aggressive**, **Normal** or **Conservative**. This input specifies the trend speed on the current chart. To change the value simply enter the text as shown in red for your preferred trend speed.

### ***Pull in Stop***

The input value can be **Off** or **On** - this simply enables or disables the pull in feature on the stop loss. The stop loss is denoted by the small green or red crosses and are part of the Trend and Stops indicator. By giving you the option to configure your stop loss, you then have full control over whether the stop loss is set wide, to allow your positions to breath in the market, or pulled in tighter after a certain number of bars have formed. If this is disabled then the stop loss will simply continue to form on the chart according to the Hawkeye algorithm.

### ***Pull in Count***

The input value is a number from 1 upwards. As an example - If the number specified is 5, then the Trend and Stops indicator will pull

the stop loss closer to the price bars after 5 trend dots have been formed.

### ***Pull in Stop To***

The input value can be Aggressive ( a ) , Normal ( n ) or Conservative ( c ). This input specifies the trend speed which will then be applied to the distance that the stop loss is pulled in to the trend. This will depend on your attitude to risk. If you prefer to have a tighter stop loss after a certain number of bars, then use Conservative. However, if you prefer to take on more financial risk, then an Aggressive setting is more appropriate. The value is either, a, n or c.

### ***Stops***

The input value can be either **On** or **Off**. This will switch on, or off, both the stop loss, the small crosses on the chart, and the crash barrier, the solid line on the chart.

### ***Trend***

The input value can be either **On** or **Off**. This will switch on, or off the trend dots on the chart.

### ***Trend Alerts***

The input value can be either **On** or **Off**. This will switch on, or off the trend alerts which are triggered on a change in trend dot color.

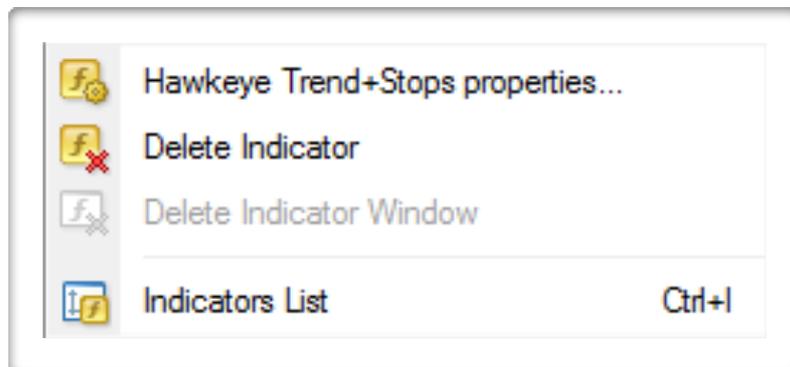

## Stop Alerts

The input value can be either **On** or **Off**. This will switch on, or off the stop alerts which are triggered as the stop loss is hit.

To save and finish **left click** on the **OK** button at the bottom of the screen. Your Hawkeye Trend and Stops indicator has now been configured to the new settings.

To remove the indicator from the chart completely:

-  **Right click** on the Hawkeye Trend and Stops Indicator
-  This will display the following pop up window

-  **Left click** on the **Delete Indicator** to remove the Trend and Stops indicator from your chart

If you are using one of the pre- configured charts supplied with your package, then the Trend and Stops indicator will already be installed on your chart

## Hawkeye Volume Indicator

The Hawkeye Volume indicator is a unique algorithm which performs over 360 calculations per bar and works in tandem with all the other Hawkeye suite of tools to tell you where the market is going next.

In arriving at it's analysis, Hawkeye looks at the open over the last twenty bars, the close over the last twenty bars, the high of the last twenty bars and the close of the last twenty bars.

The volume algorithm then takes this information and starts to weight the data accordingly.

So that when you see the current volume bar it is looking at not only that bar, but has weighted the previous 4 bars against the previous 4 bars, against the previous 4 bars, against the previous 4 bars. That will then tell us whether there is buying or selling bar by bar.

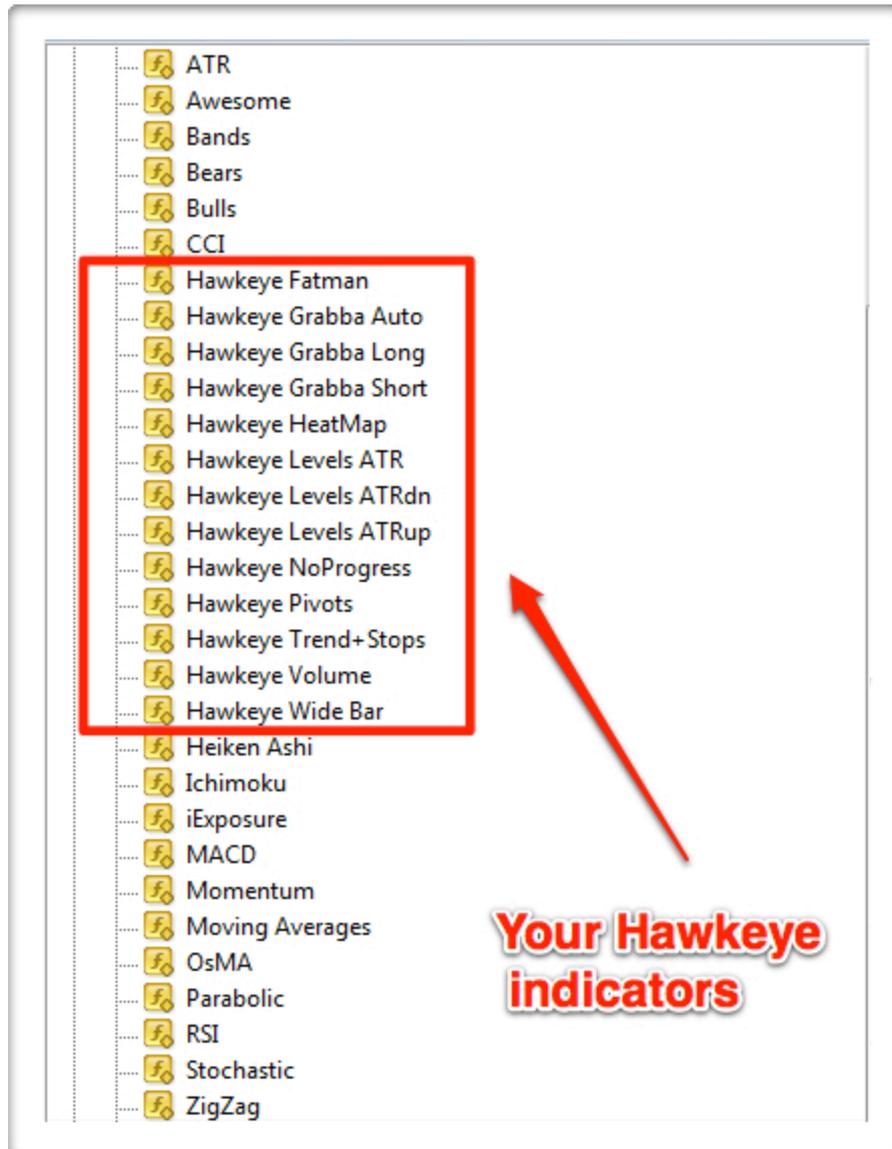

The Hawkeye Volume indicator gives two visual signals. The first is a volume bar which interprets market activity. The second is the volume bar which is then painted red, green or white as the indicator analyses the data to signal whether this is buying volume, selling volume, or neutral volume.

## Inserting and configuring

To add the Volume indicator to a current chart simply follow the steps below, using the MT4 Navigator:

-  **Left click** on **View** in the top level navigation
-  **Scroll down** to **Navigator** from the drop down menu
-  **Left click** on **Navigator**
-  **Left click** on the small **+** alongside Custom Indicators

This will display the following window with all your Hawkeye indicators listed in alphabetic order.

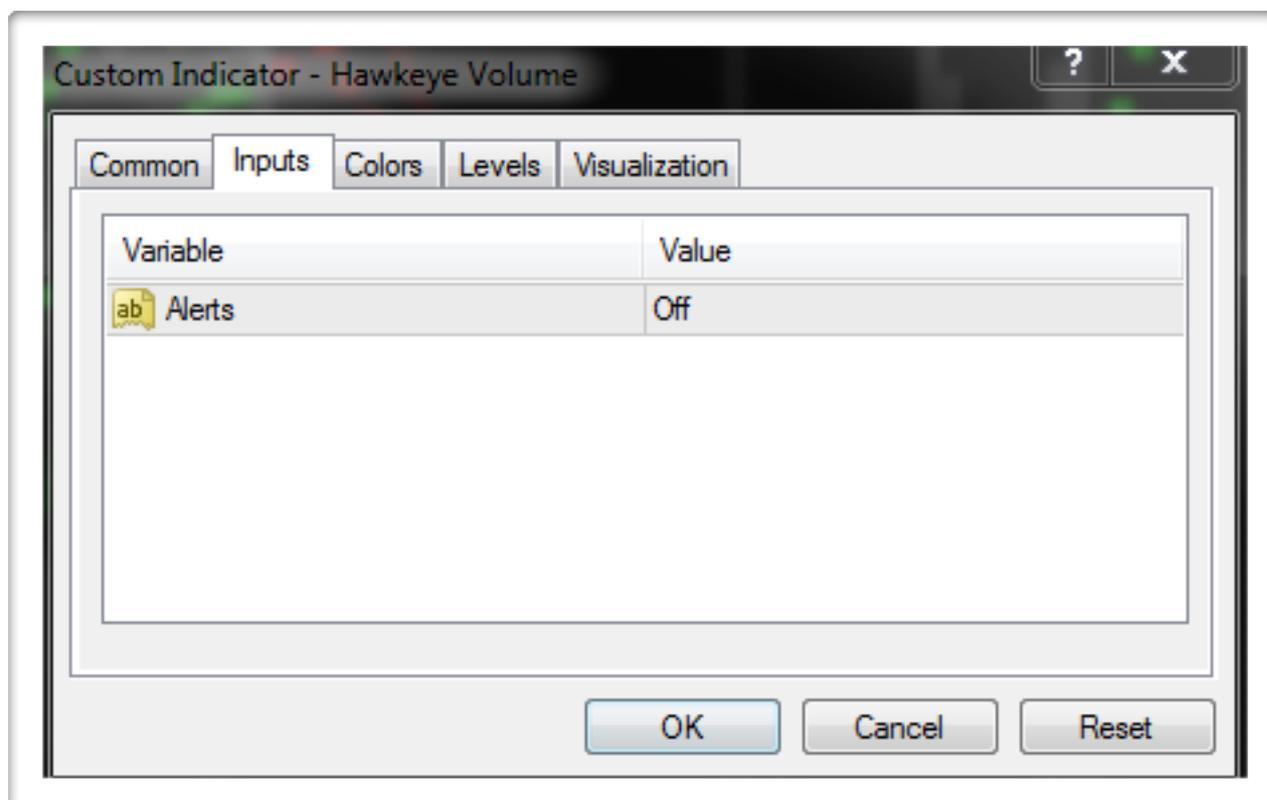

To insert the Hawkeye Volume indicator:

- 🖱️ **Left click** on the Hawkeye Volume indicator
- 🖱️ This will highlight the indicator in **blue**
- 🖱️ **Left click** and **HOLD** then drag the indicator across to the chart
- 🖱️ Your pointer will display a small box

- Once you are hovering over the chart then **RELEASE**

The following pop window will then appear:

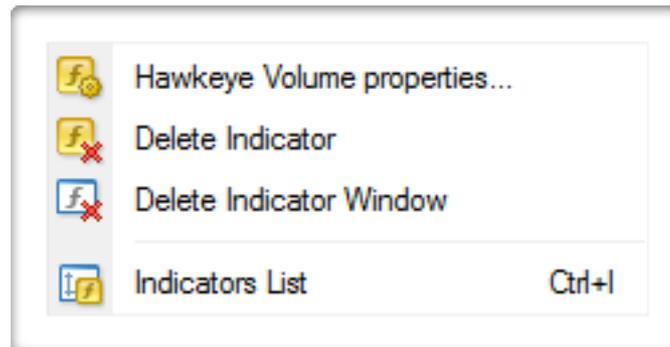

- Left click** on the OK button to add the Volume indicator to your chart

There are NO user inputs to the Hawkeye Volume indicator, other than the **Alerts** which can be found under the Inputs tab in the above window, and the color of the volume bars which can be changed using the **Colors** tab.

To remove the indicator from the chart completely:

- 📌 **Right click** on the Hawkeye Volume Indicator
- 📌 This will display the following pop up window

- 📌 **Left click** on the **Delete Indicator** to remove the Volume indicator from your chart

If you are using one of the pre- configured charts supplied with your package, then the Volume indicator will already be installed on your chart.

## Hawkeye Widebar Indicator

The Hawkeye Widebar indicator has been designed to give you an immediate and visual signal of volatile price action in the markets with a magenta diamond on the bar, and is therefore an early warning of possible short term instability.

Volatile price action is generally as a result of an economic release or an important news announcement, and is therefore a high risk time to enter any new positions. Price action following a magenta diamond wide bar, will generally trade within the spread of the bar,

so we often see subsequent bars trading in a narrow range as the markets absorb the detail of the news, following the initial knee jerk reaction.

As a result you often see markets jump and then fall back and I'm sure you've all heard that traders like buying on pullbacks.

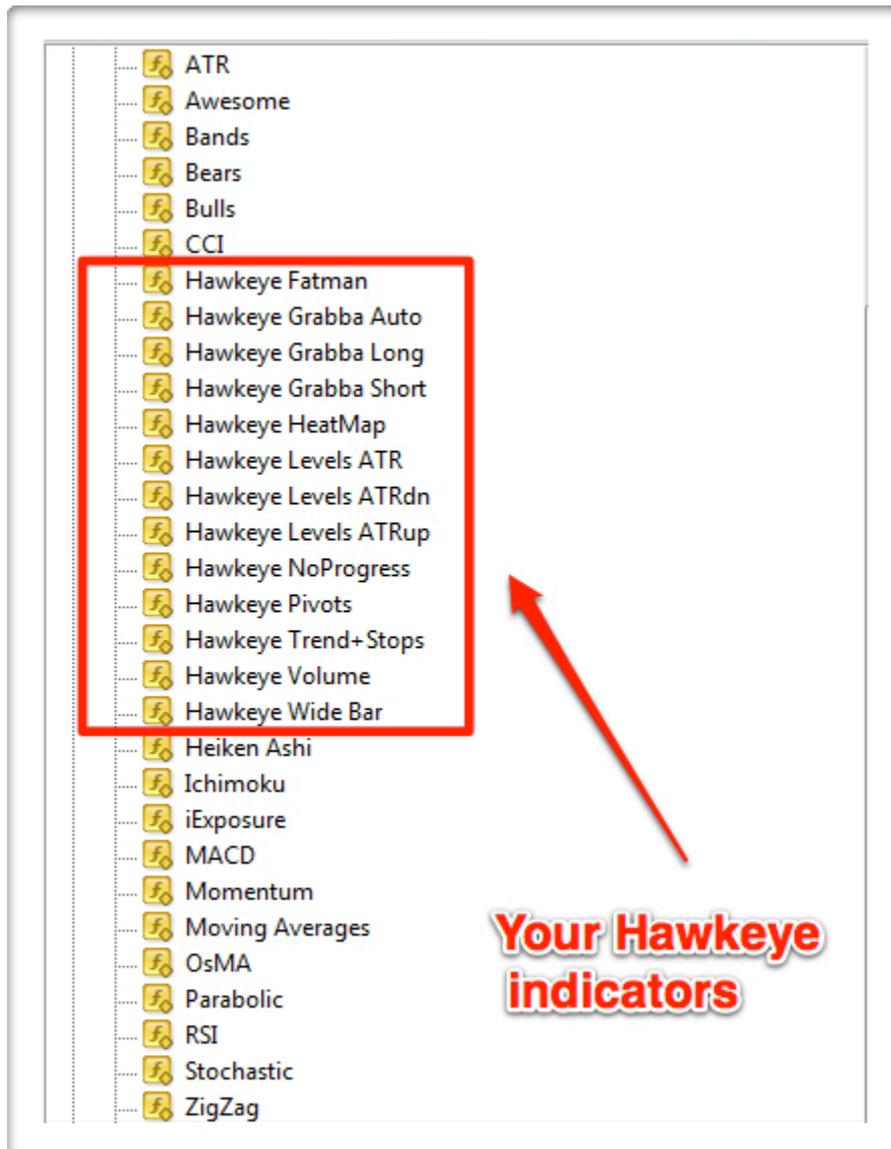

Hawkeye paints a magenta diamond bar which is twice the average true range over 20 bars and the following trading rules apply.

## Inserting and configuring

To add the Widebar indicator to a current chart simply follow the steps below, using the MT4 Navigator:

-  **Left click** on **View** in the top level navigation
-  **Scroll down** to **Navigator** from the drop down menu
-  **Left click** on **Navigator**
-  **Left click** on the small **+** alongside Custom Indicators

This will display the following window with all your Hawkeye indicators listed in alphabetic order.

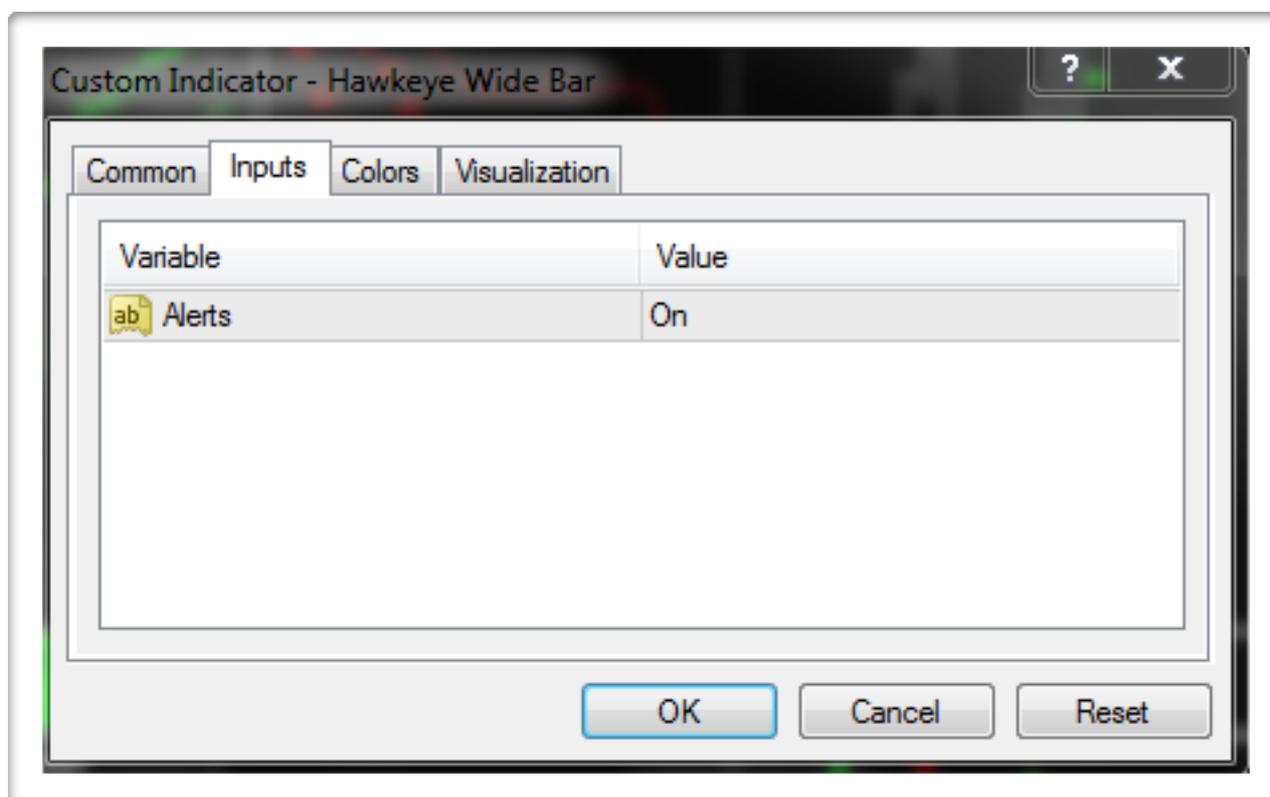

To insert the Hawkeye Widebar indicator:

- 🖱️ **Left click** on the Hawkeye Wide Bar indicator
- 🖱️ This will highlight the indicator in **blue**
- 🖱️ **Left click** and **HOLD** then drag the indicator across to the chart
- 🖱️ Your pointer will display a small box

- Once you are hovering over the chart then **RELEASE**

The following pop window will then appear:

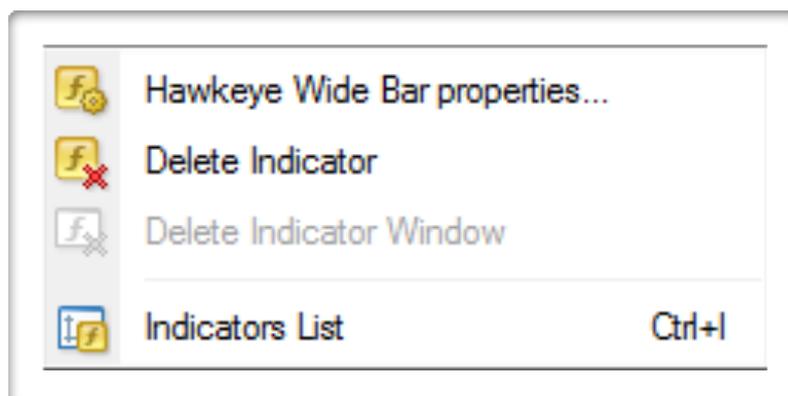

- Left click** on the OK button to add the Wide Bar indicator to your chart

There are NO user inputs to the Hawkeye Wide Bar indicator, other than the Alerts which can be found under the **Inputs** tab in the above window. The color of the diamond above and below the bars can be changed using the **Colors** tab.

To remove the indicator from the chart completely:

- 📌 **Right click** on the Hawkeye Widebar Indicator
- 📌 This will display the following pop up window

- 📌 **Left click** on the **Delete Indicator** to remove the Volume indicator from your chart

If you are using one of the pre- configured charts supplied with your package, then the Wide Bar indicator will already be installed on your chart.

## Alerts

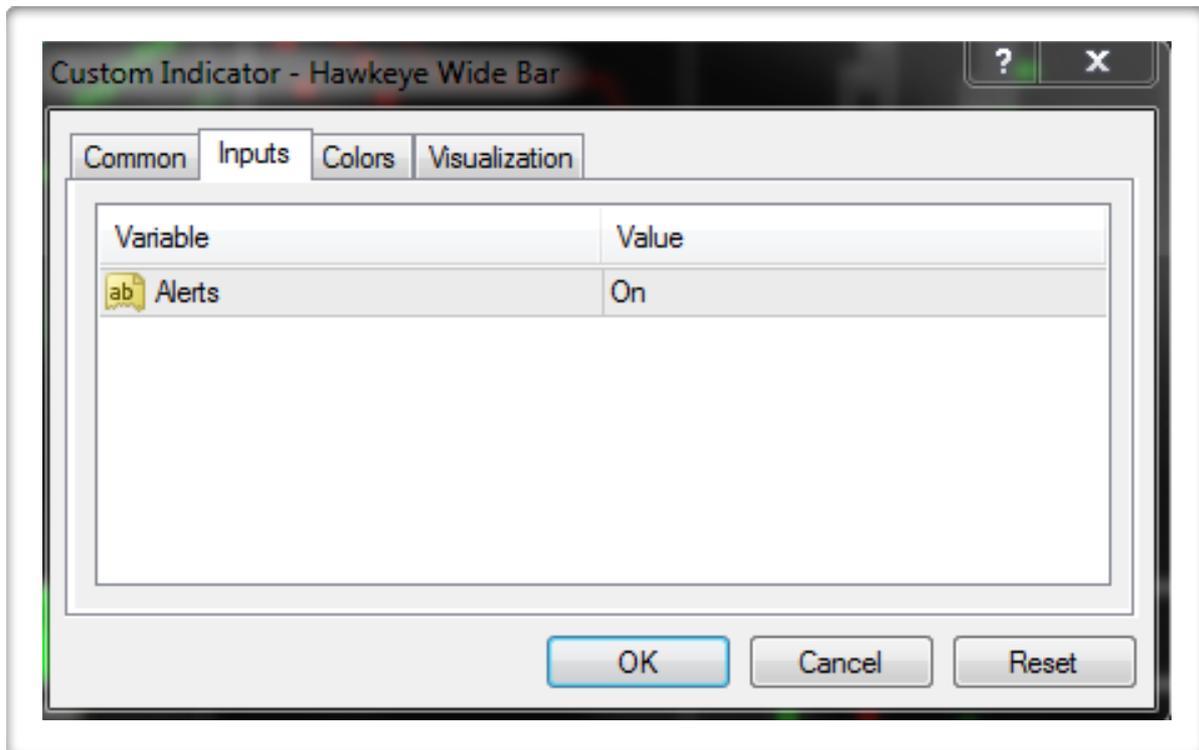

All the following Hawkeye indicators provided with your Hawkeye MT4 package can be configured to trigger automatic alerts generated by a significant change in the status of the indicator. The Hawkeye indicators which have this option are as follows :

-  Fatman indicator
-  Heatmap indicator
-  Pivots indicator
-  Trend and stops indicator
-  Volume indicator
-  Widebar indicator

The alerts for each indicator are enabled in the same way as follows :

-  **Right click** on the Hawkeye indicator on the active chart
-  **Left click** on the Hawkeye **indicator properties** in the pop up window

This will display the following window for each indicator, where you can access the **Alerts**, under the **Inputs** tab.

The **Alerts** are simply toggled **On** or **Off**. To enable the alert for the indicator, simply left click on **Alerts** in the **Variable** field, then **double left click** on the **Value** field.

To enable the Alert simply enter **On** in the **Value** field, and to disable the Alert enter **Off** in the **Value** field.

Once enabled then the Hawkeye indicator will generate an automatic alert on your screen. These are generated as follows :

-  Fatman indicator - generates an alert when a currency crosses one of the lines on the indicator

-  Heatmap indicator - generates an alert each time the Heatmap changes color
-  Pivots indicator - generates an alert each time a pivot is formed
-  Trend and stops indicator - generates an alert each time the trend changes color
-  Volume indicator - generates an alert when the volume bar changes color
-  Widebar indicator - generates and alert when a widebar is generated

## Technical Support

Your Hawkeye software package comes with FREE lifetime support and upgrades for as long as you remain a customer of Hawkeye, and this applies whether you have purchased or leased the software.

If you have read the user manual, but still feel that you would like some help with getting started, then ***don't worry - help is at hand.*** Just sit back and relax while a Hawkeye technical consultant sets up your trading platform with the Hawkeye tools and indicators,

all in the comfort of your own home or office, so you'll be up and trading with the minimum of fuss. And it's all done remotely by our own in house experts. SO here's what we offer

-  Direct connect to your computer and do the set up for you
-  Prepare or upgrade your platform for you
-  Set up your data feed if required
-  Install your new Hawkeye indicators and tools
-  Configure your indicators
-  Set up the workspaces and charts for the markets you trade

This is our target time to answer all technical support issues. Generally we answer support tickets much more quickly. If the issue is urgent, then you can contact us on Skype at the following address :

## Other Resources

Hawkeye has a wealth of material and resources to help you get started quickly as part of the Hawkeye family. Below are just some of the many educational and trading resources, which we have put together for you, all FREE, and available to you as a Hawkeye customer.

So, please make use of these valuable resources, they are there for you, to help you accelerate your trading success with Hawkeye.

*Join the Hawkeye trading forum TODAY*

- It's FREE
- Talk to other Hawkeye traders
- Swap trading ideas and strategies
- Discover how they are using Hawkeye indicators
- Make friends with other traders
- Have a question - simply ask and our moderators will reply

*Check out the Hawkeye Education Centre*

- Platform education - the manual explained on video!
- Trading rooms - watch videos of Hawkeye in action
- Trading education - the markets explained
- FREE downloads - ebooks and courses
- Hawkeye trading rules - get your copy NOW
- Hawkeye indicators explained - on video

- Trading tips - help on the ladder to success
- Trading psychology - understand who you are as a trader
- Trader training - free and paid courses to help you become a better trader
- FAQ's - find the answers to your questions here
- Trading glossary - trading terms explained

Simply login to the Hawkeye education centre using your unique password, which will then give you free lifetime access to all the above resources, which are constantly updated. So check back regularly and DON'T FORGET the Hawkeye Trading Forum - we look forward to seeing you there.
