Risk warning

Before you begin trading on Real account please carefully consider your investment goals, risk and experience you have. It should be noted that Forex is a leverage based market. It should be remembered that leverage can work both in your advantage and disadvantage as well. Therefore there is high risk of losing a part or all of your financial input placed on your account and because of that you should remember to trade with the amount of money which you can lose without taking any influential financial damage.

System Installation

1. Open your MT4 platform
2. Select the "File" tab from the drop-down menu and then "Open Data Folder".

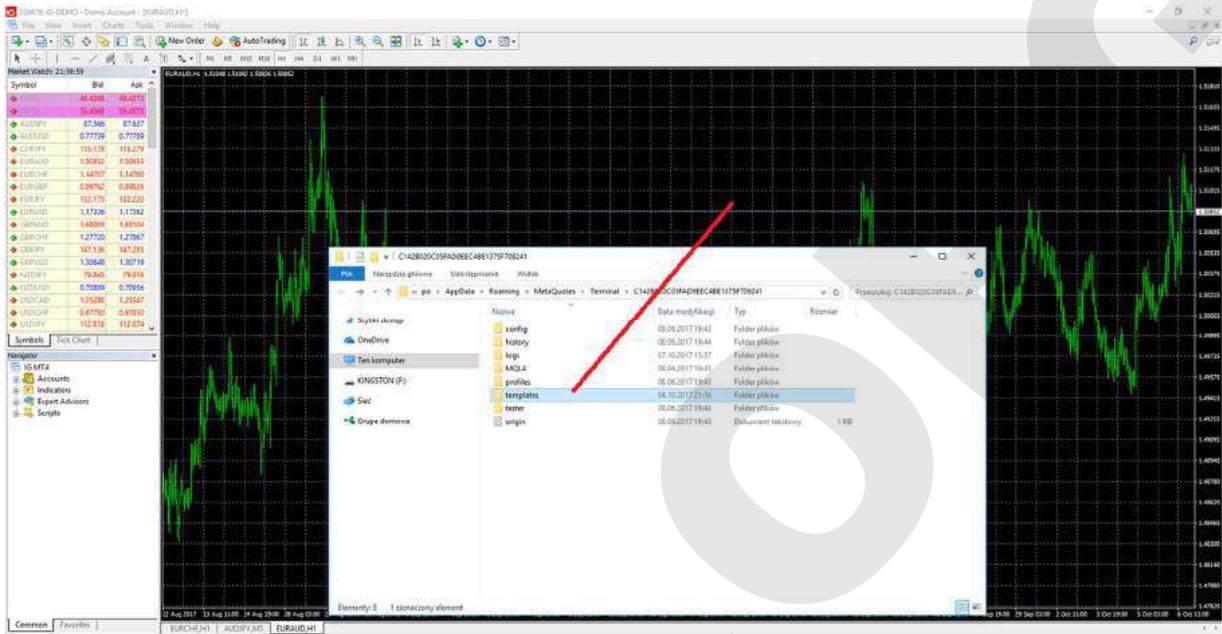

3. In a new window, select the "MQL4" folder, and then the "Indicators" folder.

4. Copy/paste system indicators here

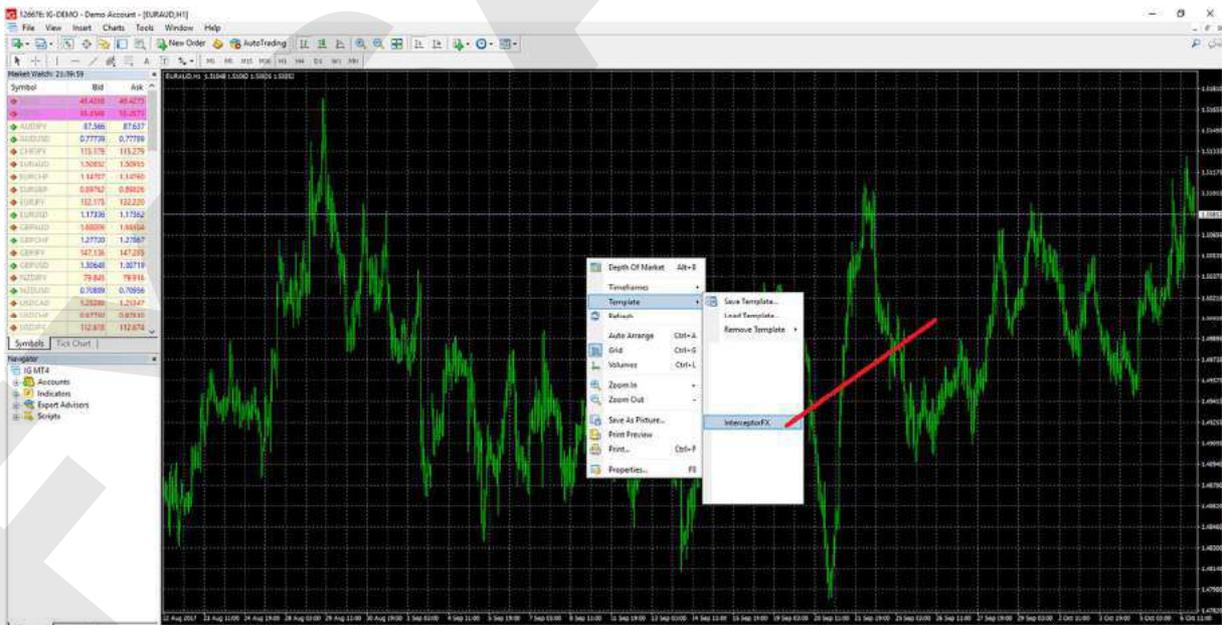

www.interceptorfx.com

5. Go back to the main directory, open 'templates' folder and copy the "interceptorfx.tpl" file here

6. Restart MT4 platform.

7. Pick your favourite trading instrument. Right click on the chart and choose template/interceptorfx

www.interceptorfx.com

System overview

System contains two indicators:

- Pairs_Analyzer

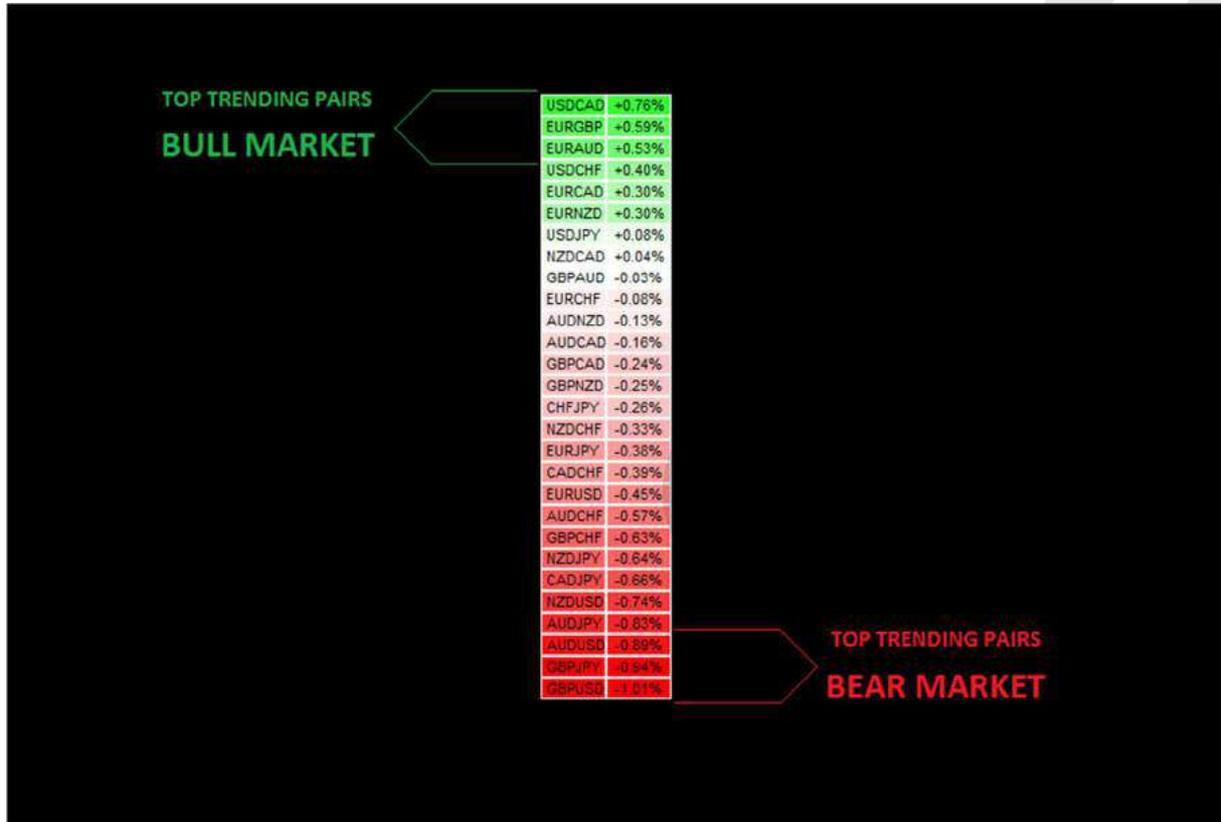

- InterceptorFX Indicator

www.interceptorfx.com

System achieves the best performance when both indicators are in use.

The Pair analyzer contains all the major currency pairs on the forex market. It will tell you which pairs are worthy of interest and which one to pass.

InterceptorFX Indicator will show you the best entry/exit spots on the chart.

www.interceptorfx.com

How Does It Work

Before you open any trade on any given trading instrument, check the most trending pairs on Pairs_Analyzer indicator.

The first three instruments from the top and bottom are the most trending currency pairs on a given time interval.

USDCAD	+0.76%
EURGBP	+0.59%
EURAUD	+0.53%
USDCHF	+0.40%
EURCAD	+0.30%
EURNZD	+0.30%
USDJPY	+0.08%
NZDCAD	+0.04%
GBPAUD	-0.03%
EURCHF	-0.08%
AUDNZD	-0.13%
AUDCAD	-0.16%
GBPCAD	-0.24%
GBPNZD	-0.25%
CHFJPY	-0.26%
NZDCHF	-0.33%
EURJPY	-0.38%
CADCHF	-0.39%
EURUSD	-0.45%
AUDCHF	-0.57%
GBPCHF	-0.63%
NZDJPY	-0.64%
CADJPY	-0.66%
NZDUSD	-0.74%
AUDJPY	-0.83%
AUDUSD	-0.89%
GBPJPY	-0.94%
GBPUSD	-1.01%

On the above example, we can see that the most bullish pairs are:

USD/CAD EUR/GBP EUR/AUD

while the most bearish pairs are:

GBP/USD GBP/JPY AUD/USD

Depending on which market we are most interested in (bull/bear), we choose one of the three trending pairs. We open the chart and wait for the system signal

www.interceptorfx.com

The rules for entry are very simple.

The first colored bar is the entry signal.

On this picture we can see the first red candle.

It's a valid SELL signal.

When candles turn into grey color again, it's the best spot for take profit.

www.interceptorfx.com

The same rules goes for bull market.

The first colored bar is the entry signal.

In the picture below, we can see that candles turned from grey to green.

It's a valid BUY signal.

When candles turn into grey color, it's the optimal place for closing the trade.

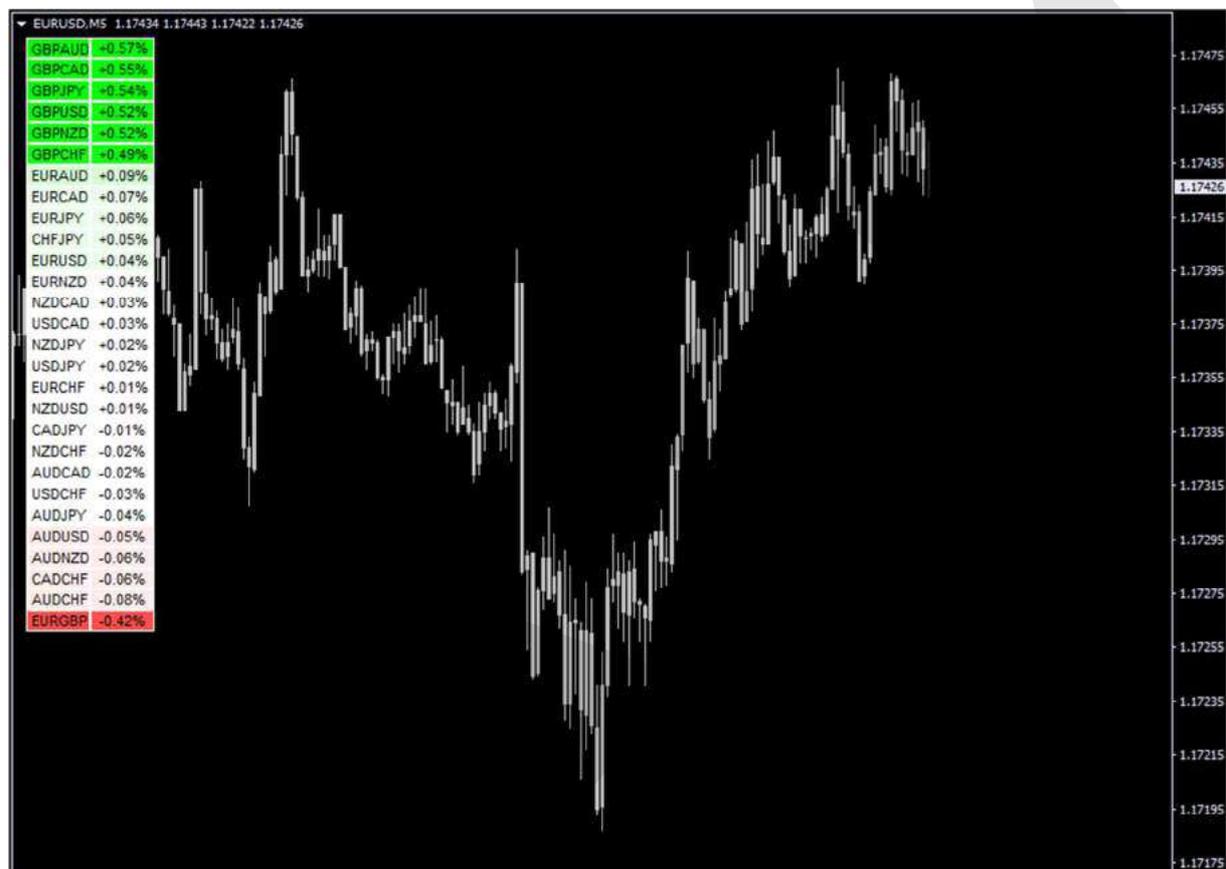

www.interceptorfx.com

Trade Examples

BULL Market

Let's say you start your trading day with the EUR/USD chart, as most traders do.

Here is how it looks today.

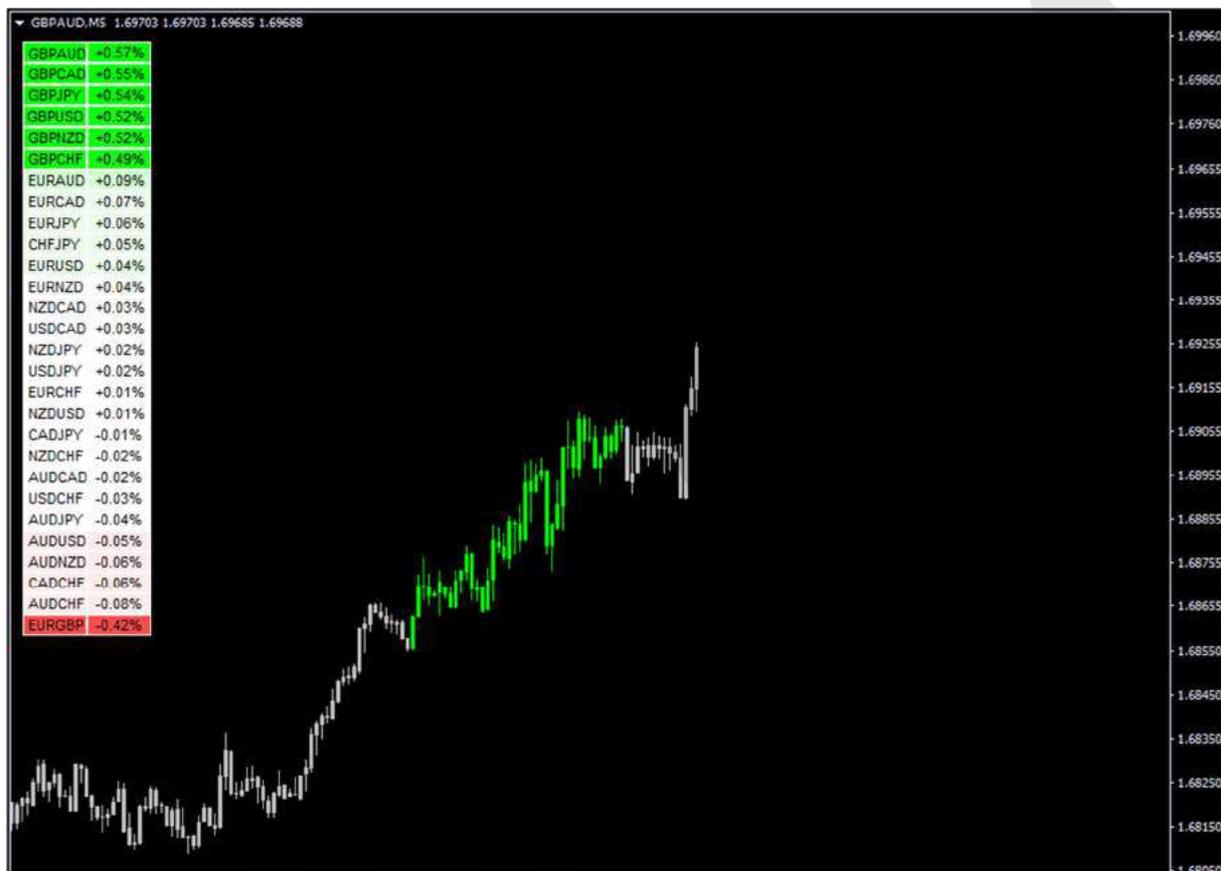

We can quickly notice on Pair Analyzer that EUR/USD is in the middle with value: +0,04%

How about GBP/AUD which is on the top with +0,57%?

www.interceptorfx.com

We can notice that the first BUY signal has ended, but the pair is still at the top.

What should we do now?

It's simple, we wait for another BUY signal on this trading instrument.

www.interceptorfx.com

Few minutes later we can see another BUY signal (green candle on the chart). You will be notified about it with system alert.

It's the optimum place for opening a BUY order.

www.interceptorfx.com

Around 3 hours later our trade has ended. Candles turned into grey color again.

We can see that GBP/AUD moved to +0,99% on Pair Analyzer.

Trade is closed for total of +46pips.

www.interceptorfx.com

Trade Examples

BEAR Market

How to trade SELL signals.

It works the very same way as BUY signals.

First check the bottom pairs on Pairs Analyzer

Pick one that has grey candles (market still in neutral phase).

www.interceptorfx.com

We wait until the first red candle appears.

This is valid SELL signal.

www.interceptorfx.com

Transaction should remain open, until the candles turn into grey color again.

We can see that USD/JPY moved from -0,26% to -0,66% on Pairs Analyzer

Our profit is +37pips

Indicator Settings

InterceptorFX

To get access to the indicator settings, press the right-click on the chart and select an appropriate indicator. Then choose 'inputs' tab.

Candle Settings

You can change the candle colors for:

- Bull Market
- Bear Market
- Neutral Market

www.interceptorfx.com

Alerts Settings

You can use three different alerts.

- Standard MT4 alert (pop-up window + sound)
- E-mail notifications
- Push notifications send to your phone

www.interceptorfx.com

Indicator Settings

Pairs Analyzer

Indicator location

You can pick:

- Left UP Corner
- Right Up Corner

Suffix/Prefix settings

If you trade with broker that has standard pair names, like: EURUSD, GBPUSD do not change anything here.

If you trade with broker that has non standard pair names, like for example Forex.com that uses .pro suffix (pair look like this: EURUSDpro, GBPUSDpro etc.) you can put an appropriate suffix/prefix here to make indicator calculations right.

www.interceptorfx.com

Indicator Colors

You can change:

- Text Color
- Border Color

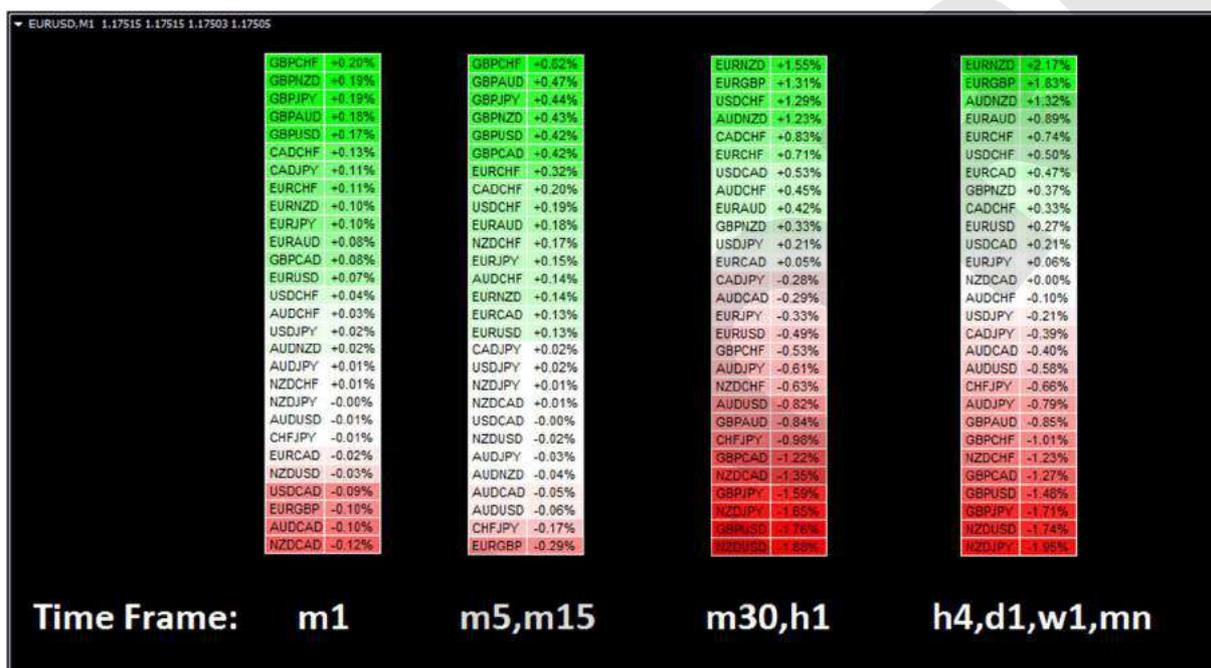

www.interceptorfx.com

Different Trading Modes

Forex Interceptor Software can be used successfully for any type of trading.

You can scalp, daytrade or use the highest TFs for swing trading.

System uses different calculations on different TFs.

Scalp (m1 TF) – has the fastest calculations

Scalp/DT (m5/m15) - offers dynamically entries to catch 20-50pips

DT/Swing (m30/h1) – calculations and trade signals are moderate fast. It's great for traders who have not much time during a day for trading

Swing (h4,d1,w1,mn) – has the slowest signals. Recommended for traders who can check the charts only few times per week/month.

A handful of advice

- Do not trade before important market data. It is safer to wait until the announcement and then join the trend
- Focus on the major forex sessions. Trends usually start at European/Us session. Watch the pairs on the Pair Analyzer indicator and when you see that one is hitting the top/bottom of the list, look for a signal in that direction
- Do not overtrade. It's better to focus on the smaller number of pairs. If you will open 5-10 trades at once, it will be very difficult to manage them all
- Use your account wisely. Do not put more than 1-2% risk of your account per trade.
