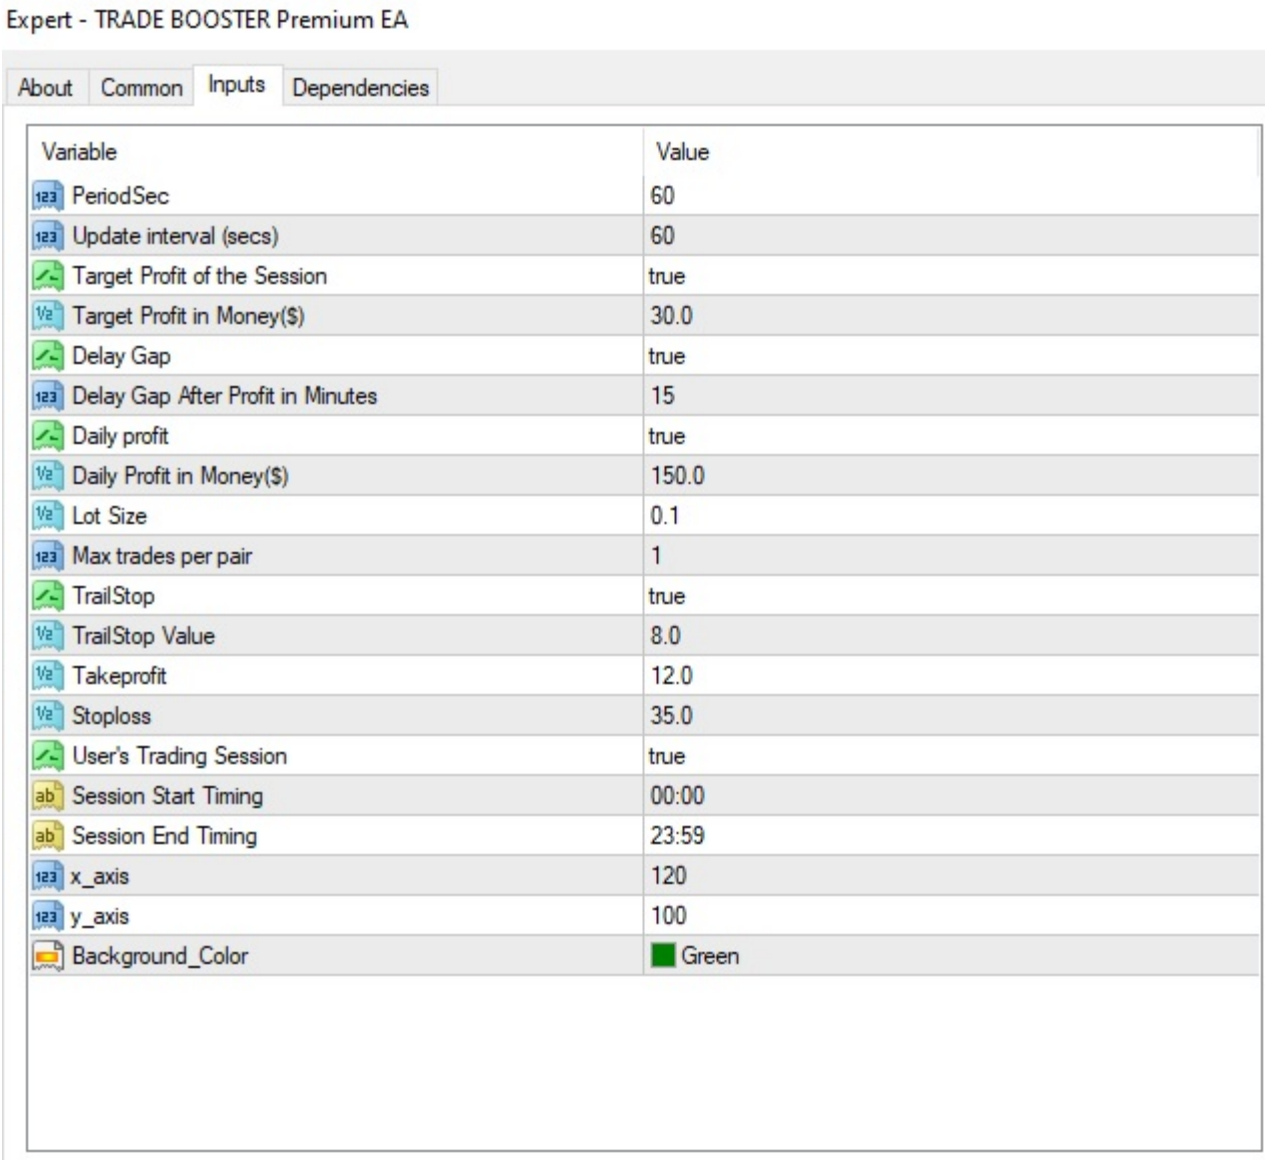
Let's have alook how it looks like and what are the new features added in version2.0.



1) Parameters :

1) Target Profit of the Session : It should and must be in True Mode.

2) Target Profit in Money($) : This Target Profit gives you profit in $. Target profit is actually how much you are targetting the profit in the current running trade. For example if you set 20 which is in Dollar. And Currently total 30 Trades are running and out of 30 trades 18 trades are in profit and remaining 12 trades are in loss, And over all current Net profit is 20$, Then all trades will close automatically.

3) Delay Gap : It should and must be in True Mode.

4) Delay Gap After Profit in Minutes : This is the gap between 2 consecutive Target Profit in Money($). Suppose you set 30 value which is in Minutes. So as soon as Target Profit hits the given value then EA will wait till 30 minutes. Then EA will be active and start taking trade.

5) Daily Profit : It should and must be in True Mode.

6) Daily Target in Money($) : This Daily Target in Money gives you profit in $ based on Daily Basis. Once the Daily Target hits then EA will stop for that day and will be active on Next Day.

7) Lot Size : With what lot size you wanted to start your trade.

If your equity is

1) 200$ to 400$ then your lot size should be .01 only, Daily Target in Money($)= 10, Target Profit in Money($)= 3.

2) 400$ to 600$ then your lot size should be .02 only, Daily Target in Money($)= 20, Target Profit in Money($)= 6.

3) 600$ to 800$ then your lot size should be .03 only, Daily Target in Money($)= 30, Target Profit in Money($)= 9.

4) 800$ to 1000$ then your lot size should be .04 only, Daily Target in Money($)= 40, Target Profit in Money($)= 12.

5) 1000$ to 1500$ then your lot size should be .05 only, Daily Target in Money($)= 50, Target Profit in Money($)= 15.

6) 1500$ to 2000$ then your lot size should be .06 only, Daily Target in Money($)= 60, Target Profit in Money($)= 18.

7) 2000$ to 2500$ then your lot size should be .07 only, Daily Target in Money($)= 70, Target Profit in Money($)= 21.

8) 2500$ to 3000$ then your lot size should be .08 only, Daily Target in Money($)= 80, Target Profit in Money($)= 24.

9) 3000$ or above, then lot size should be .1, Daily Target in Money($)= 100, Target Profit in Money($)= 30.

8) Max trades per pair : As its already mentioning how many trades you want to execute from a currency pair. I set 1 so keep it as it as Please dont change.

9) TrailStop : Enable your trailstop.

10) TrailStop Value: Its upto you what value you want to trailstop your current running trade. I am keeping 12 pips.

11) Takeprofit : I am keeping 40 pips .

12) Stoploss : I am keeping 40 pips.

13) User's Trading Session : It should be in true mode.

14) Session Start Timing : If you want your EA to start trading at any particular time then set accordingly or else leave it as it is.

15) Session End Timing :If you want your EA to end trading at any particular time like 8 pm or 9pm or 10pm then set accordingly or else leave it as it is.

16) X & Y-Axis: These are the axis for adjustment of your EA.

17) Background_Color : You can customise the background color of your EA.

Here it is "TRADE BOOSTER Premium EA version 2.0", Let's discuss how it works.

1) First This EA will take confirmation from STRENGTH, Then it will look for HL (High & Low). After getting confirmation from HL it will check TREND Confirmation of 1Min, 5Mins & 15Mins time frame. If all 3 time frames are on the same direction then only it will look for MOMENTUM or else EA will keep checking TREND. In Momentum, I set 1min, 5Mins, 15Mins, 30mins and 1hr time frame, Here all time frame will cross check one another like 1Min will check 5Mins, 15Mins, 30Mins and 1Hour, same at 5Mins,15Mins 30Mins and 1Hr will do, And finally Advanced Currency Meter 4.0 confirmation. So overall this EA will keep checking every individual confirmation from Strength to Momentum. If any single confirmation will be missing EA will not place any single trade.

2) Advance Currency Meter version 4.0 is on next level. Here you can see UP, DOWN and 2 way Arrow. Suppose USD is at 7.5 or 8.0 value at Advance Currency Meter version 4.0 but arrow is down which signifies USD will become Bearish. And Suppose AUD is having 1.5 or 1.0 value and showing UP Arrow it means trend is changing from down to up. And 2 way Arrow signifies trend changing from up to down or down to up.

3) After getting all previous confirmation from Strength, HL, Trend, Momentum, then Advance Currency Meter it will place trade for Buy or Sell.

4) As you can see Max Profit, Max Loss, Target Profit i have mentioned in the EA. MAX Profit and Loss will show you how much maximum profit and loss made by

this EA on the current running trade. Target profit is the same that i have mentioned in the parameter above.

5) Simply drag n drop the EA from Expert Advisor list in one of your chart and Enable the Auto Trading mode of your MT4. Rest EA will handle everything. Automatically it will take trade when ever it will get signal from all 5 Confirmations.

Important Points:

1) Very Importat one is NEWS. Always avoid taking trade at major NEWS Time. Visit investing.com every morning and check major 3 Star News. Suppose at 6pm on USD there is 1 major NEWS so stop your EA at 5.45pm to 6.30pm, then start your EA as usual.

2) After Renting this EA-Robot, I want your Real MT4 Account noand working Mail ID.

3) Dont change any settings from the shared EA. If you do so you will be responsible for your profit and loss.

4) I can customise the Currency Pair which you want me to add or remove based on your requirement with max 28 Pairs/Indices.

5) From morning to evening you can run your EA and can close in the night. No need of VPS service.

6) EA-Robot will be locked by the given MT4 Account Number. So only you can use it. Be sure your given MT4 Account Number should and must be correct.

7) After taking this EA-Robot, It can't be transferred to another MT4 account or Refund or any exchange with others.

8) On Every Referral you will be getting 50$.
