Hello. I wrote my own version of this indicator
for my own needs, where it is possible to view
the Depth of Market on the...

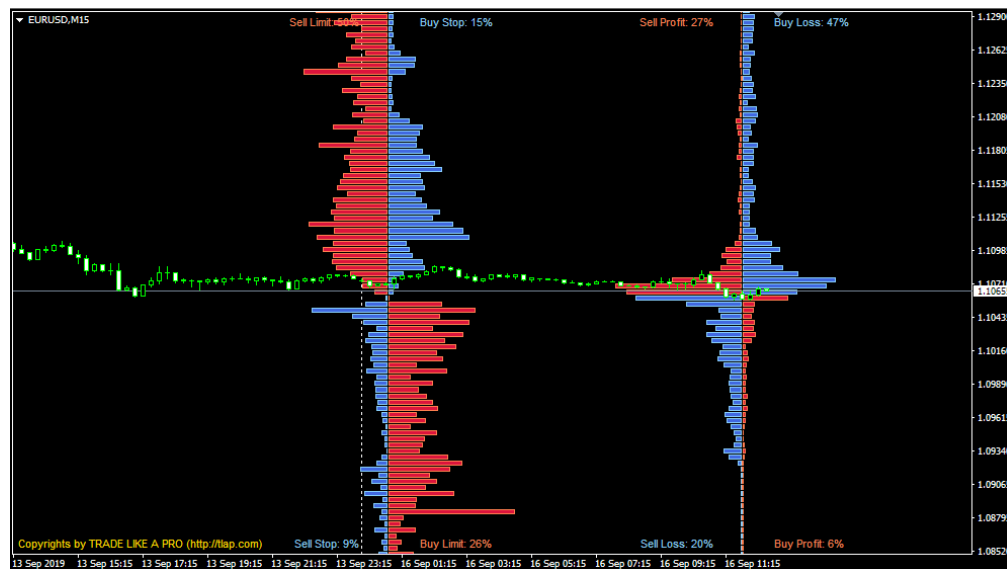

POSTED IMAGES

Data source: Oanda Broker and TradeLikeAPro website: <https://tlap.com/order-book/>

Description: The Order book is a copy of the Oanda traders' book of open and pending orders. The largest American company in the Forex services market serves as a "reference cross-section of positions", reflecting the level of supply and demand of the total number of participants in currency trading.

The main task of the indicator is to transfer data from the TLaP site to the MT4/MT5 terminal for a more visual display of data.

The data in the indicator is updated every 20 minutes since the last update on the site. In other words, when the indicator is placed on the chart, the information is analyzed and the time of the last request is recorded in memory. After 20 minutes, the data on the site is updated. If this data has not changed, the check will be resumed every minute until new information appears, but if the update has occurred, then the next check will be in 20 minutes.

Tlap.com**

Бонусы!

Type of calculation - option to choose the display of bars: Total volume (ALL) or net (NET). The net indicator is calculated as an absolute indication of the difference between buy and sell orders.

MarketDepth - Choose the order book to display: Positions - positions only, Orders - orders only, All - both order books.

Offset Right side (px) - shift of the indicator data relative to the right corner of the chart in pixels.

Distance Between Order Books (px) - distance between two order books in pixels

Positions_Width - width of the order book of open positions

Orders Width (px) - width of the order book of goals and orders

> *Extra Settings* <

DrawPositionsPercentLine - displays the vertical line of the specified percentage for the order book of open positions. At 0 - disabled.

Draw Orders Percent Line - displays a vertical line of a specified percentage for the order book. At 0 - disabled.

Show Summ Percentage Label - displays the labels of the total percentage of data for both orders.

Show Lable TLAP - display

the clickable copyright of the **TLAP** site in the upper left corner of the chart.

> *Color Settings* <

Limit/Profit Color - color of the rectangular frame for displaying limit orders and

orders in profit Stop/Loss Color - color of the rectangular frame for displaying stop orders and orders at a loss

Limit/Profit Background Color - background color in the bars for displaying limit orders and orders in profit

Stop/Loss Background Color - Background color in the bars displaying stop orders and orders at a loss

If the indicator does not work, do not rush to write a post about it, look at a number of measures to solve the problem
