PRO 624 TRADING SYSTEM

Purchasing Pro 624 Trading System is one of the best decision and step you've ever taken towards your journey to becoming a pro trader in this Forex business. Pro 624 Trading System is one of my boom secret of making consistent profits daily. If you're a dedicated full time Forex trader, I welcome you to your world of Forex fortune. Your confidence and dedication to Pro 624 Trading System will make it deliver beyond your wildest imagination.

What does the acronym Pro 624 stand for?

This system overviews this 24 hour market from 4 hours perspective thereby creating six {6} trading opportunities. Therefore "Pro 624" means Professional way of trading the Forex market 6 times in 24 hours.

Every Business has a winning secret that gives the informed an edge over others. Pro 624 is one of the undiscovered secrets in this biz that allows you to quietly follow and profit from the 4 hourly trend that builds up into daily. Professionals trade higher time frame which most of the time allow them to swing trade.

I'm going to be precise and brief about this secret I'm about to share with you.

PLATFORMS SETUP

Platforms Needed.

Pro 624 uses two platforms for accurate analysis. These platforms are:

- {i} VT Trading Platform and
- {ii} MT4 Trading Platform.

You don't need to have a live account with any of these brokers before you can analyze with their platforms. Opening a demo account would do except you later decide to trade live with them. You can open a demo account with VT Traders by typing www.cmsfx.com in your browser. Click on practice account and fill in the form that opens by the right side of the page with your details. This will grant you access to your login details that will be displayed immediately in the next window that opens. It will not be sent to your inbox so make sure that you save your login details on your desktop. After this you can now download VT Trader's platform setup from the same page as you can see in the pix below.

Demo Registration Form - Windows Internet Explorer provided by Yahoo!

http://www.cmsfx.com/IBMDemo/index.php?op=SHOW_CONFIRM&unit_id=100®_count=0

Thank you for opening a demo account!
To get started, follow the steps below.

1 Write Down Your Login Information

Use this username and password to log into VT Trader, our Forex trading software.

User Name: **ken4fx**
Password: **f8s14n05**

Important: It is advisable to print this page for your records.

2 Download Software

To begin trading with your practice account, please download our trading software, VT Trader.

DOWNLOAD VT TRADER™ 2.0

VT Trader™ 2.0
MASTER YOUR WORKSPACE

3. PLATFORMS SETUP

CATCHING THE TREND EARLY

After the download, run the setup icon and you'll see the shortcut icon placed on you desktop. Then click on the shortcut and impute your login details. If you encounter an error message saying incorrect password, copy your password from where you saved it and paste. Then the VT Trader's platform will open and display as shown below.

The next step is to close all the windows displayed on the platform by clicking the black X and YES when a dialog box pops up. All the windows to be closed are:

- Quotes Board window
- All the default charts that open
- Account{s} information window
- Trading Activity window
- And Broker Announcements window

We're not going to be placing trades on this platform; we only need it for analysis to catch accurate and timely entry hence we do not need the closed windows for our analysis.

After clearing all these, you should have a good and clear space on your platform like the next chart below.

After clearing a good workplace, we can now bring out our chart. For pro 624, I recommend these pairs; GBP/JPY, EUR/JPY, GBP/USD. I like trading GBP/JPY because of its trending behavior and volatility.

It works perfectly well with Pro 624. EUR/PJY also works well, it moves in the same direction of volatility with GBP/JPY 90% of the time when not being influenced by Euro zone fundamentals.

Now follow the steps below to configure your platform.

- i. Click on the chart tab, this will display all chart properties.
 - ii. To your extreme left, click on open chart and select GBP/JPY.
 - iii. Change your time frame to 4 hours.
 - iv. Click on zoom tool and select one or two days by holding and dragging it from the high of the candles to the low on your extreme right.
- You should achieve something like we have in the chart below.

Now that we have our chart set up, looking at the chart reveals that on 4 hourly time frame, 6 candles are grouped in each day. The first candle that begins the day is the 12am candle, the 2nd is 4am candle, the 3rd is 8am candle, the 4th is 12pm candle, the 5th is 4pm candle and the 6th 8pm candle that closes the trading day. This circle of occurrence begins from Sunday 16.00 {EST} and continues till Friday 16.00 {EST} on VT Trader's platform. Although 4 hourly rollover differs from one broker to another due to time zone difference, I prefer trading that of VT Trader's Platform to others because it rolls over before others.

The next thing we must understand is the opening and closing time of these candles in your local time and on your MT4 broker's time.

You can achieve this by taking note of when your 4 hourly chart closes to begin a new candle. Your MT4 chart should also be on one hour chart so you could ascertain your MT 4 broker's time for VT Trader's 4 hour roll over. At this time you must also note your own local time on your system.

For example, I discovered that The VT Platform 4 hourly rollover in my local time is 1am, 5am, 9am, 1pm, 5pm, and 9pm respectively. So the time difference is 1 hour. This gets me prepared by 1am to analyze and spot my entry signals as I watched how VT platform 12am candle closes on 4 hour chart { which is 1am my local time} and how 4am candle opens on the same VT platform 4 hour chart { which is 1.01am my local time}. This set up scenario exists 6 times in a day thus helping you to know when you're to be by your pc.

THE SYSTEM

The System:

Pro 624 creates 6 trading opportunities in 24 hours as you can now guess. We look out for a good setup on VT trader's platform and then switch to MT4 platform for confirmatory signals with our indicators before we place our order.

You can choose to begin trading any time of the 4 hour rollover. I personally like to begin after the first 4 hours of the day has been completed. I personally observe that more often than not, the market must have shown little of its bias for the day at the end of the first 4 hours. This means I'll be trading the 4am candle which will open by 5.01am my local time.

It is advisable to get set at least 30 minutes before the new candle begins. This will allow you to analyze and observe the market activities as 4 hourly trading volume moves to a close.

The next thing we do is to switch to our MT4 platform and change it to 5 minutes chart. We're going to be using 5 minutes time frame to receive our signal based on the 4 hourly bias to access and follow the trend.

Pro 624 Trading System in a nutshell:

First we analyze the long term charts and look for the "market condition" that is likely to be sustained for the next 4 hours and peradventure for a given day. Once we know the market condition of any currency pair, we then try to find an entry signal in the short term charts, this allows us to have a small risk per trade, but our take profit orders are set based on the long term charts.

VT Platform 4 Hourly trend bias

- i. If the 4 hourly candle closes as bullish, we'll look for opportunity to go long as the next 4 hour candle opens.
- ii. If the 4 hourly candle closes as bearish, we'll look for opportunity to go short as the next 4 hour candle opens.

Looking at the 4 hourly charts on VT Trader's platform, you'll agree with me that more than 75% of the candles form shadows at one or both ends. Those shadows are what give us trading opportunities to get in at the right time. These shadows are also regarded to as retracements or pullbacks.

See below examples of 4 hourly candles establishing shadows at one or both ends.

ENTRY RULES

Our Entry Rules:

- i. Wait for VT Trader's Platform on 4 hours to close.
- ii. Wait for the next 4 hourly candle to open and pullback against the one that just closed.
- iii. Switch to your MT4 platform and put it on 5 minutes time frame.
- iv. On your MT4, look out for an indicator called T&C to appear against the pullback.
- v. Initiate your order using instant execution or market order type.
- vi. Manage your trade.

To make the rules clearer, we'll take several trade examples together following our entry rules one step after another. This will help us to appreciate this revealed secret.

On 1st September 2009, let me show you how I traded Pro624 in the chart below.

We will begin our trading from the close of 12am 4 hour candle on VT Trading platform. This means we want to trade the 4am candle.

Our entry rule {i} says Wait for VT Trader's Platform on 4 hours to close. The 12am candle closed as a bullish blue suggesting an uptrend bias for the next 4am candle. Click on the chart tab then select cross hair sub tab. This will allow you to see the candles and their times as you move your cursor over each one.

Entry rule {ii} says; Wait for the next 4 hourly candle to open and pullback against the one that just closed. So we wait and observe this pullback.

In the chart below, the 4am candle opened and pulled back as it turned bearish. This pullback later formed the shadow.

{iii} The next thing to do is to switch to our MT4 platform, putting it on 5 minutes time frame. By this, we now have two platforms opened. One VT Trader's platform and our MT4 platform.

{iv} Now in this scenario, we want to trade long because the previous candle closed bullish. So as we switch on to MT4 on 5 minutes chart and discovered that it has pulled back enough, we're going to time our entry using T&C. This indicator is precise and timely. It will appear at a strong support against the minor trend bearish move indicating an end to that move. This is our accurate entry point. In order to view these two platforms in one to make my explanation clearer, I'm going to be cutting and pasting VT Trader's platform 4 hours on our MT 4 platform 5 minutes for each trade entry setup.

If you're a little bit confused at this point don't you worry, the charts below will probably clear it up.

Trading the 4am candle on 1st September, 2009.

After taking our profit at logical point of retracement of daily resistance, we'll be cautious of trading long because the market price will bounce off the resistance level thereby causing a change in 4 hourly trend. In view of this, we will wait to observe how the new candle which is 8am candle closes.

On 1st September 2009, the 8am candle on VT Trader's platform closed bearish after testing the highs of many previous days on 4 hourly chart. We'll therefore change our bullish trading perspective to trading bearish. We now have a new clue to trade the new trend by looking for opportunity to go short.

Trading the 8am & 12 pm candle on 1st September, 2009.

Trading the 4pm candle on 1st September, 2009.

As you could see, Pro 624 is a trend following system. You keep having trading opportunity whenever the 4 hourly closes and opens on VT Trader. If you're dedicatedly following the trend using pro 624 you'll bank amazing pips within 24 hours of the day.

I recommend using it with LPR Trading system so that the sudden change in trend will not catch you unawares.

However with the templates included in your indicator folder, Your LPR has been drawn to make Pro 624 deliver maximally. The price observes the logical points of retracements as drawn on the charts until a breakout occurs. If a bullish candle closes at a strong logical point of Monthly, Weekly, or Daily resistance, the next candle will go bearish to respect the logical points 99% of the time. The same thing happens whenever a bearish candle closes at a strong logical point of Monthly, Weekly, or Daily resistance, the next candle will go bullish. Every other space in between the logicals is a free ride for pro 624.

To simplify this, we have included Procelator_624 & Procelator_624basic indicators as filters: These two indicators work in conjunction with LPR templates. First install these two indicators, you may also install Fib Pivot and T&C wonders indicators as well.

To install click on your Local Disk {C} – Program files – your broker's folder – Experts – Indicators. Then copy and paste Procelator_624 & Procelator_624b.

To install your LPR templates, click on Local Disk {C} – Program files – your broker's folder – Templates. Copy and paste the 3 templates there. Close your platform and re-open, click on template icon on your menu bar to access your template according to the pairs you opened on the chart. For example, if the chart displayed on your platform is GBP/JPY, click on the drop down menu on your template icon and select Lpr gj.

Your Procelator indicators will also be displayed in a separate window below your chart at the same time. See example below:

In the separate window below the chart above, Procelator_624 is displayed and could be used as filter for trend confirmation on higher time frames of 4hourly and daily.

As you could see in the chart above, whenever procelator changes color and the lime line cuts the red line upwards or downwards, the trend changes. You will also notice that at this point on the chart also the logical points are reached signaling a change in direction and confirmed by T&C wonders. The winning percentage probability of this type of setup is very high. Some traders feel comfortable trading this setup than the real pro 624. They always wait patiently looking out for the market price to drop or rally to a logical point with procelator confirmation and other indicators as additional filters; they take the trade with strong confidence. These are the points where occasionally, you can go against Pro 624 rules. That is, if a 4 hourly candle closes bullish at a strong resistance {daily, weekly, monthly} suggesting a long trade after waiting for a pullback according to Pro 624. We'll disregard the suggestion and go short at the logical point with a good setup as described above then take our profit at the next logical point. This kind of trading method is called "Logical to logical".

As for the main system which is pro 624, you may even decide to trade three out of the 6 times opportunities in a day. If you'll like to do this I'll recommend trading 4am, 8am and 12am respectively and perhaps if you spot any breakout that leads to a change in trend, you can capitalize on that opportunity by trading the next 4 hourly candle with Pro 624 trade setup.

If after entering a trade you discover that it breaks the previous day's high or low, take your profit at the appearance of opposing T&C indicator.

Stop Loss: Your Stop Loss should be below/above the low/high of the candle on which T&C appeared for long/short. Your stop loss should be determined with good risk/reward ratio.

Take Profit: I recommend taking your profit at the appearance of opposing T&C. You may also decide to swing trade it and locking in your profit in stages. The way you manage your trade depends on your experience.

Conclusion: Finally I hope I've been able to make you see how profitable trading Forex market could be as you begin to spot good trading opportunities with accurate entry setup using Pro624. I can't wait to write your own testimony.

Good Trading.
