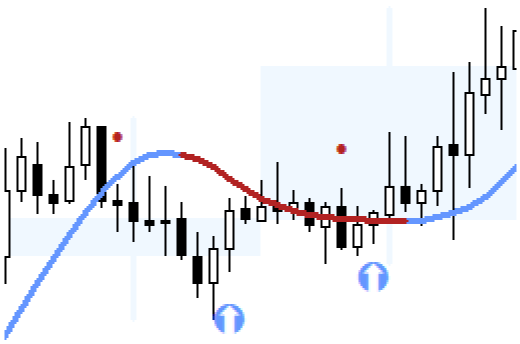
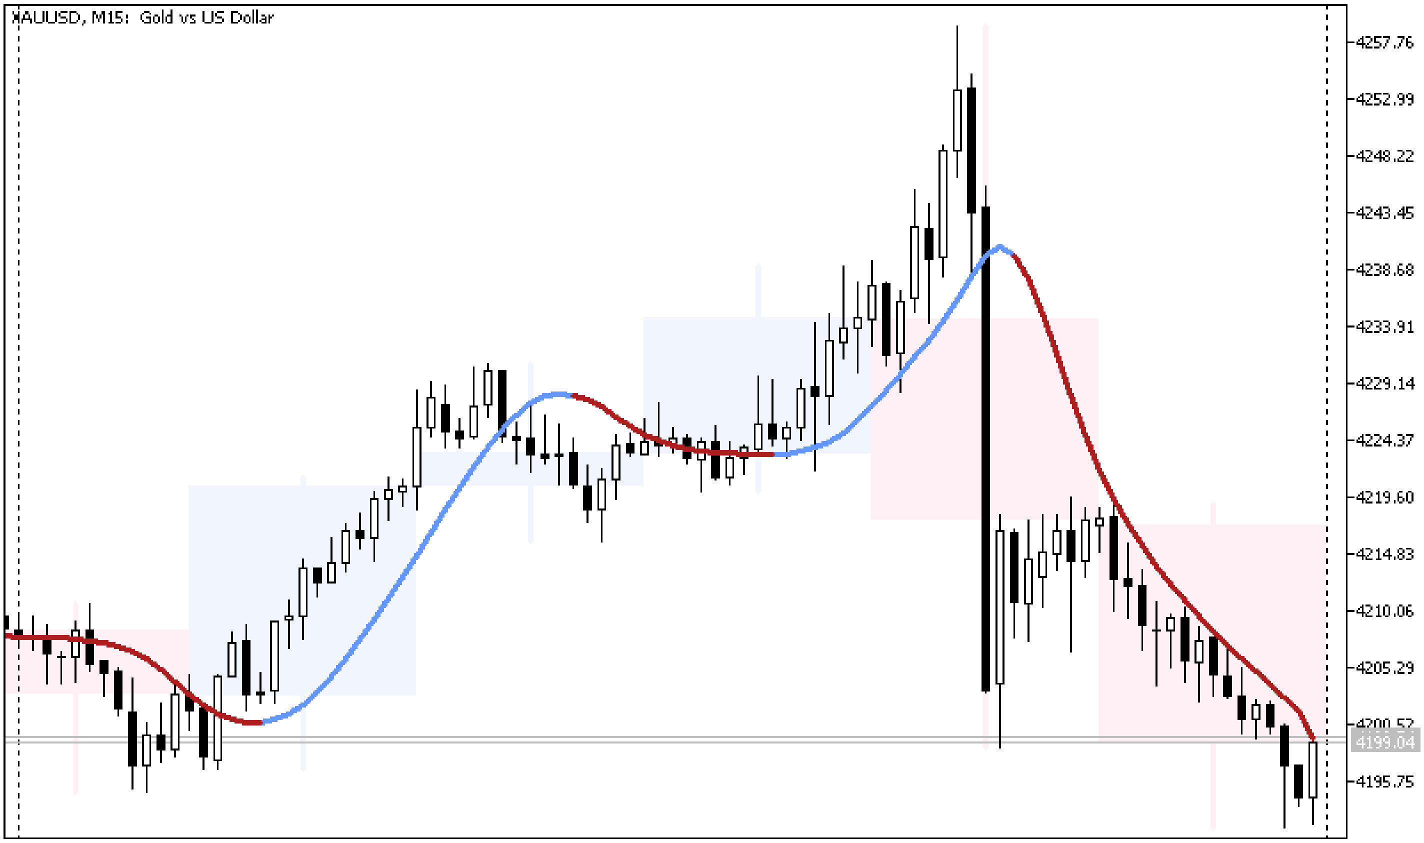
GREEN PIPS TRADING STRATEGY



1) SIGNAL ARROWS:

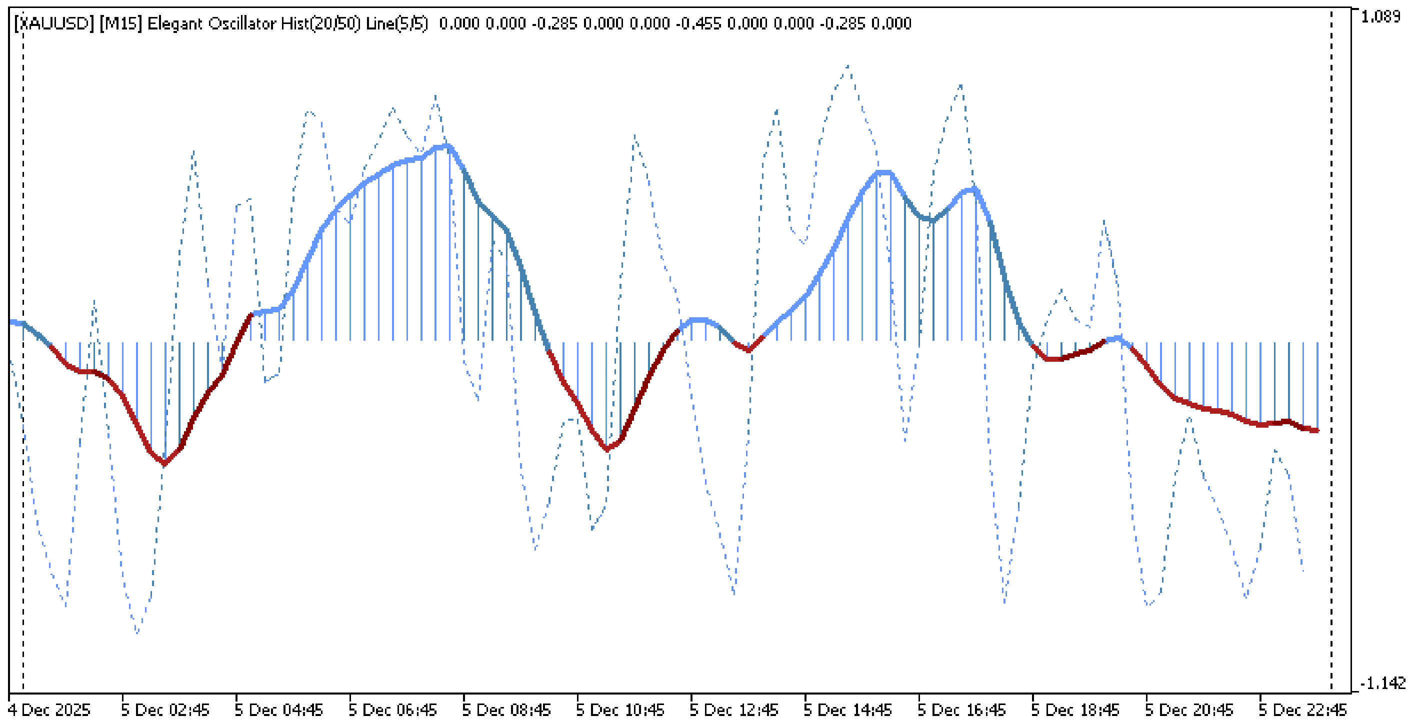
They're just an EMA(3) crossover with EMA(5).



2) SHORT-TERM TREND:

New John Ehlers' "Laguerre Filters (on chart)".

If a complete candle is above the line, go **LONG/BUY**.

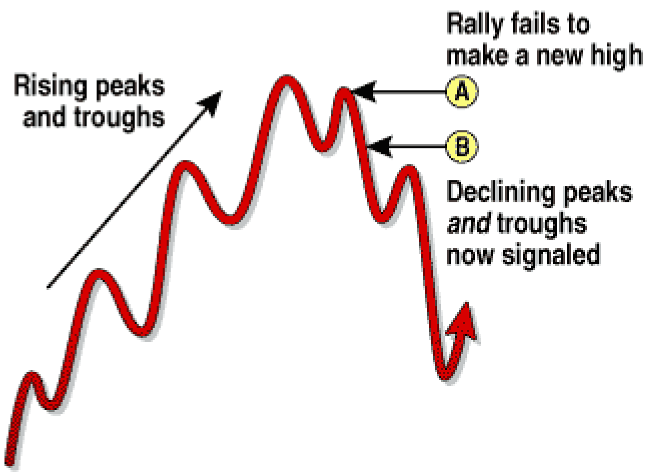


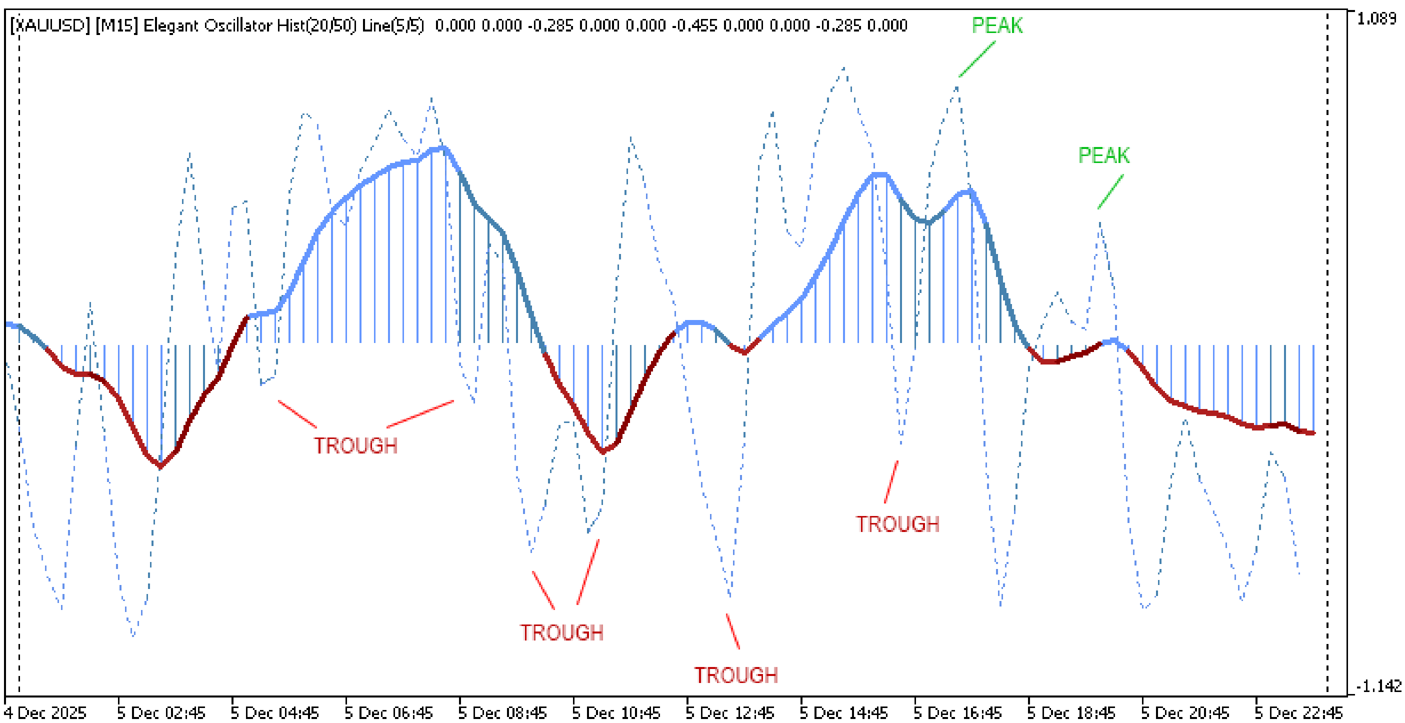
3) HISTOGRAM:

New John Ehlers' "Elegant Oscillator".

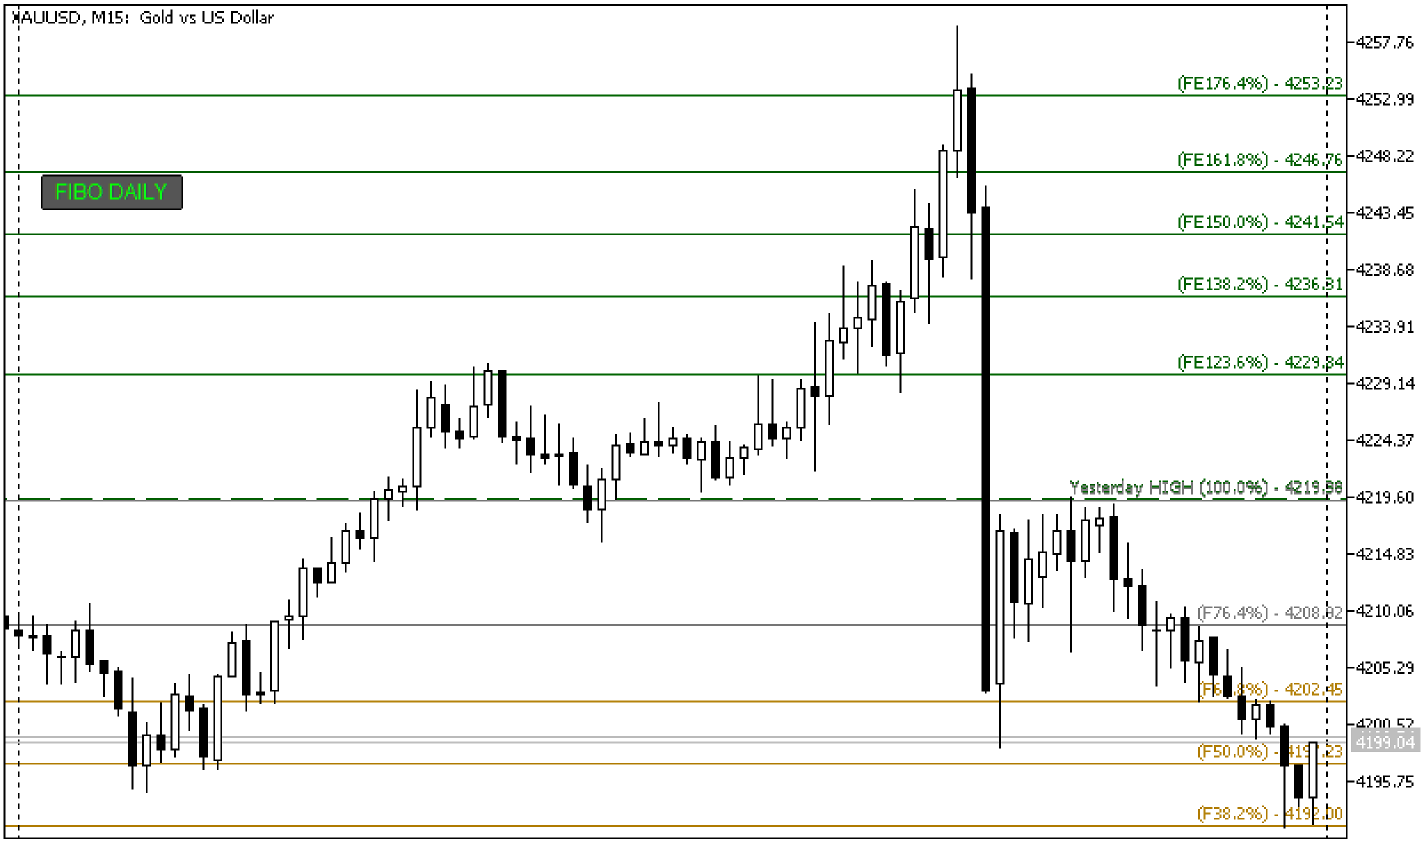
We always need a histogram to check for divergences.

If histogram crosses up zero, go **LONG/BUY**.



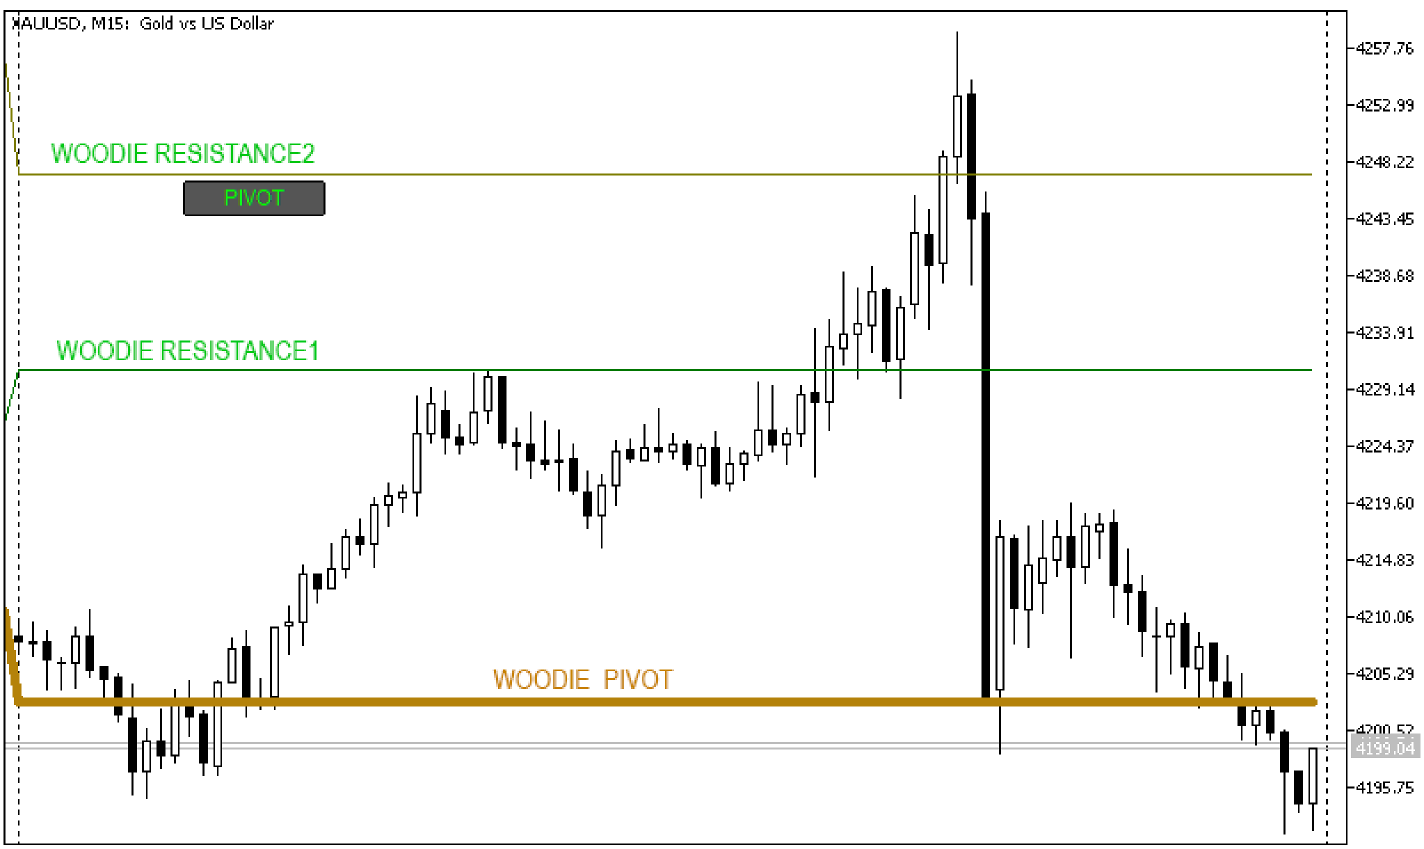


In this indicator, there's a dotted line. That line can pinpoint peaks and troughs.

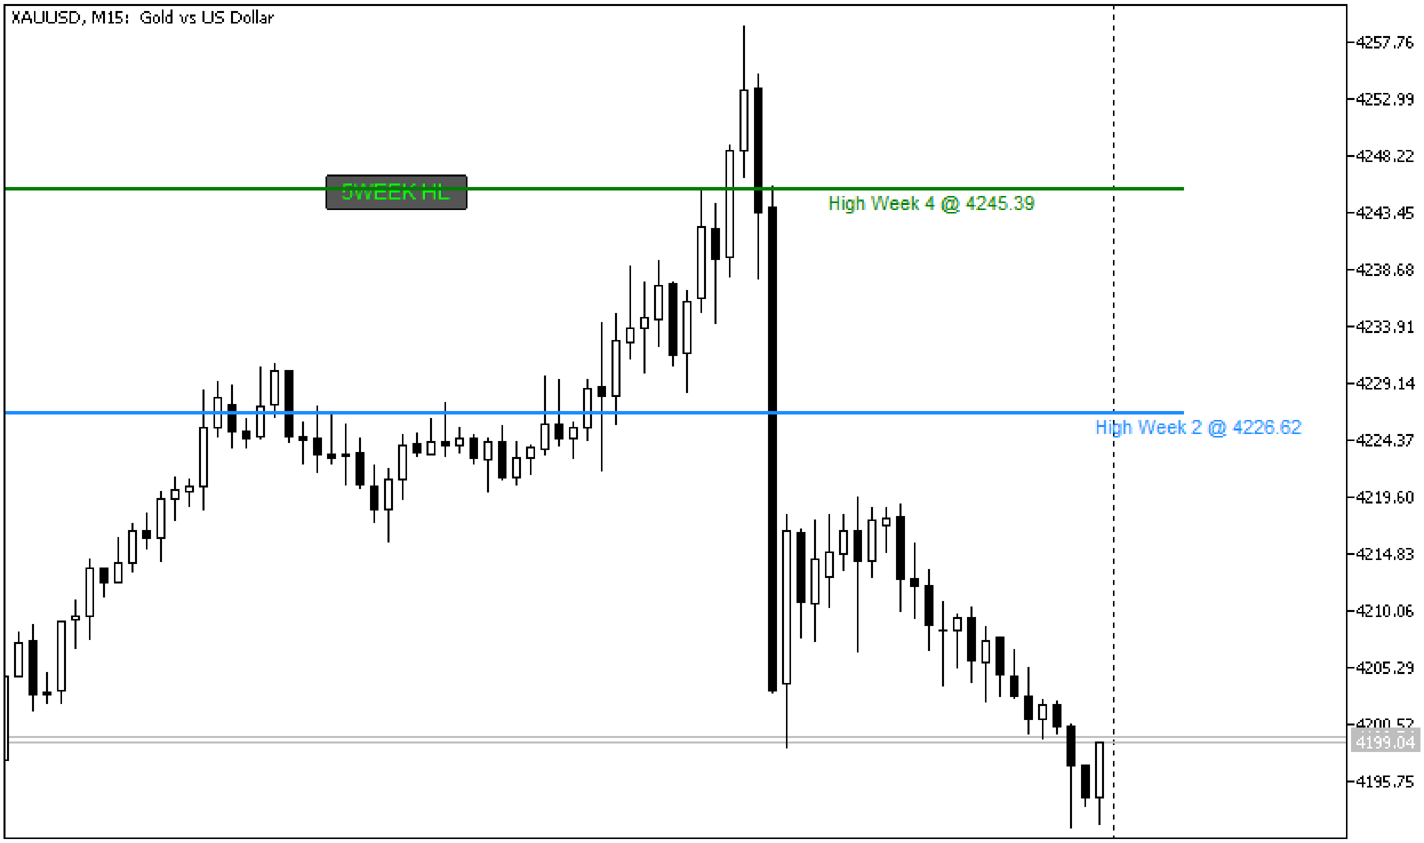


4) YESTERDAY'S FIBONACCI:

It's very useful to see how today's prices are related to yesterday's prices.



5) WOODIE PIVOT, RESISTANCES, & SUPPORTS

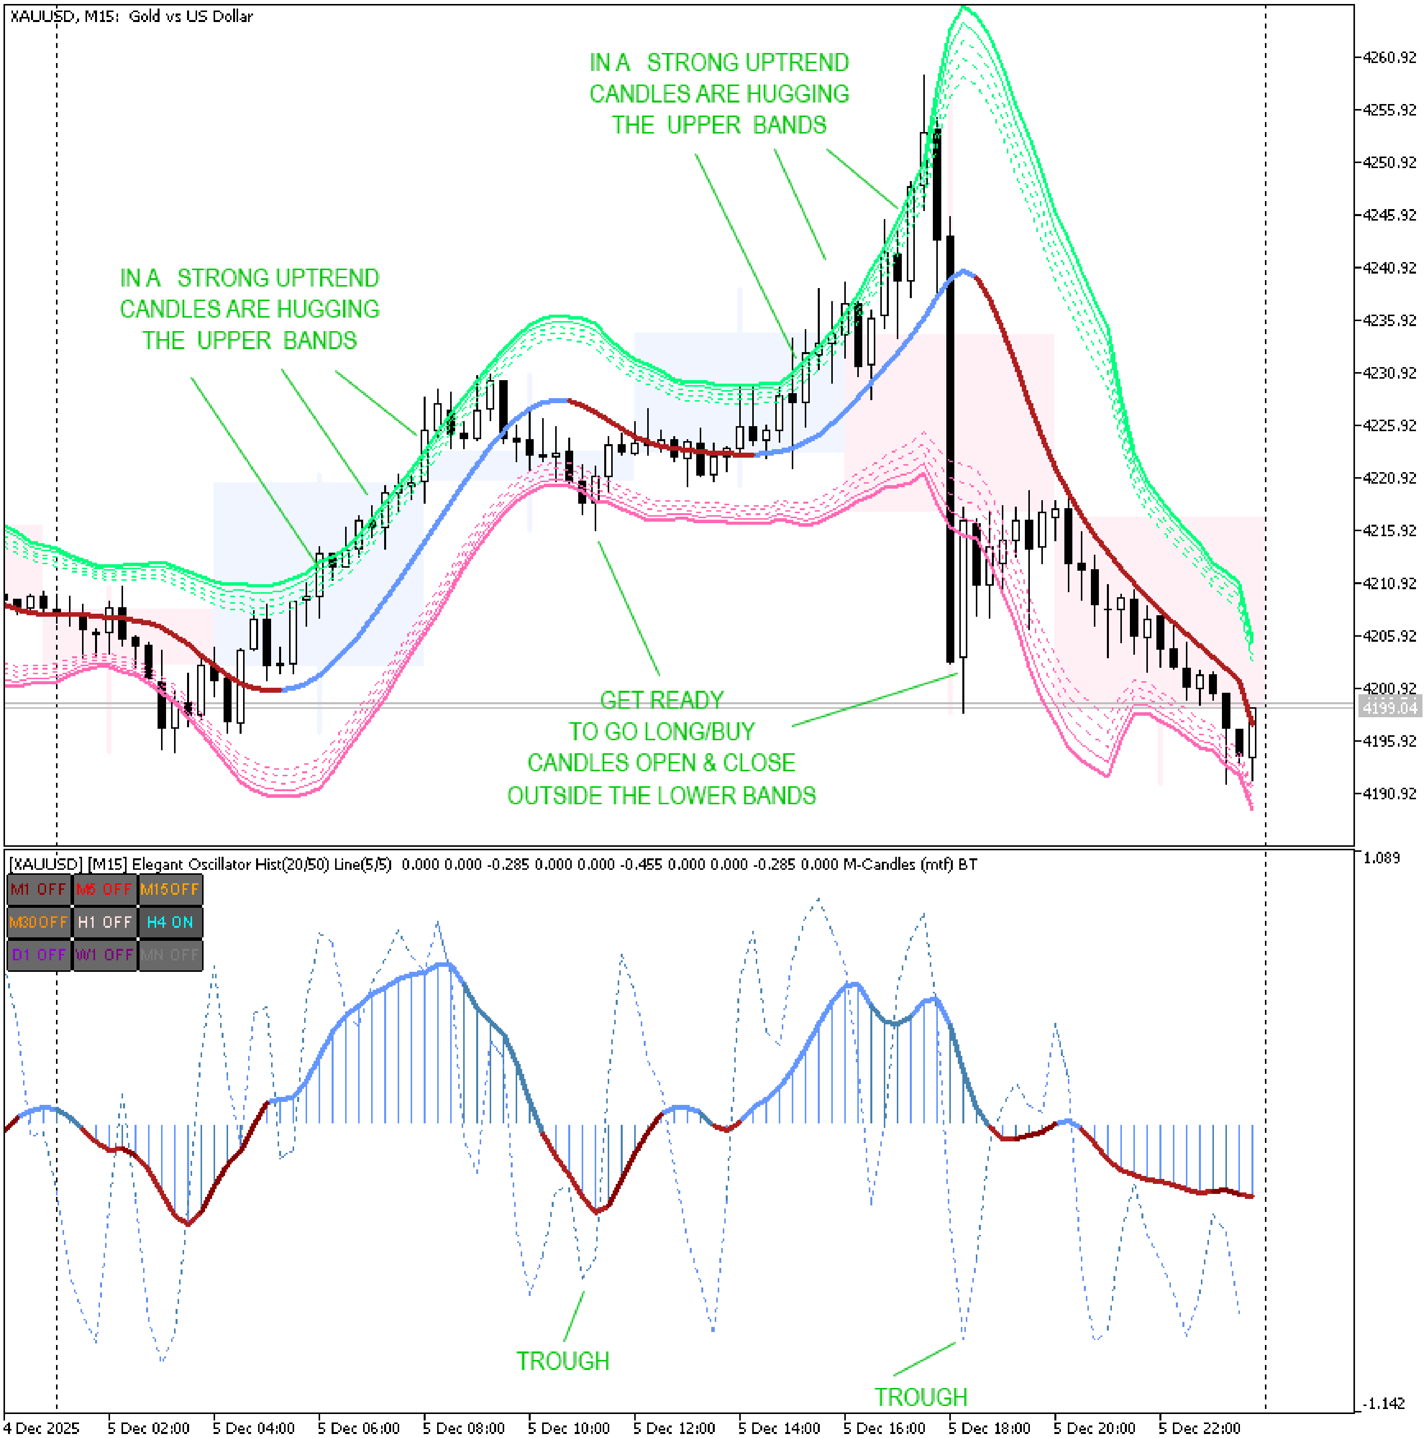


6) WEEKLY HIGH & LOW

These prices can be supports or resistances.

7) CURRENCY METER

On this particular day, CAD is strong @ 9.1 and EUR is very weak @ 3.0.
So we should **SHORT/SELL** EURCAD more than buying.



8) LAGUERRE FILTERS with ATR bands

In version 1.01, the bands are very useful to trade consolidation. If the candles open and close outside the bands, then get ready for some green pips.
